- A. Failover all guests' active traffic-group to the other Host, Relicense the host, copy image to guest, create guest UCS, install and set boot location to new volume , reboot
- B. Failover all guests' active traffic-group to the other host, copy image to guest, create guest UCS install and set boot location to new volume, reboot, Relicense the host
- C. Relicense the host. Failover all guest's active traffic-groups to the other host, copy image to gest, create guest UCS install and set boot location to new volume, reboot
- D. Failover this specific guest's active traffic-group to the other Host, Relicense the guest, copy image to guest , create guest UCS, install and set boot location to new volume, reboot

Answer: A

Explanation:

Switch guest, reactive, license first and then upgrade.

NEW QUESTION # 112

An LTM Specialist needs to configure a virtual server with the requirements displayed below.

Application is currently an internal HTTP application Encrypted external user access Links are hard for siteA example.com and need to rewritten to siteB.Example.com

Which profiles must the LTM Specialist use to provide the proper functionality?

- A. Clientssl, fastL4, Stream
- B. Serverless, Stream
- C. Clientssl, Stream
- D. Serverless, fastL4, Stream

Answer: C

Explanation:

For http application and external encryption, clientssl is required, and if the message content needs to be modified, the steam profile is required. FastL4 profile cannot coexist with clientssl and stream.
