In addition to the comprehensive Salesforce Analytics-Arch-201 practice exams, our product also includes Salesforce Certified Tableau Architect (Analytics-Arch-201) PDF questions developed by our team to help you get prepared in a short time. Our Prepare for your Salesforce Certified Tableau Architect (Analytics-Arch-201) PDF format works on all smart devices without limits of time and place.

It is our promissory announcement that you will get striking by these viable ways. So do not feel giddy among tremendous materials in the market ridden-ed by false materials. With great outcomes of the passing rate upon to 98-100 percent, our Analytics-Arch-201 practice materials are totally the perfect one. Different from all other bad quality practice materials that cheat you into spending much money on them, our Analytics-Arch-201 practice materials are the accumulation of professional knowledge worthy practicing and remembering.

Real Salesforce Analytics-Arch-201 Dumps & Analytics-Arch-201 Exam Fee

The prep material created by the Itcertkey are the best choice because we provide you with Salesforce Analytics-Arch-201 exam preparation material in 3 different formats. This is helpful for you since every candidate has a different study style and the diversity of Salesforce Certified Tableau Architect (Analytics-Arch-201) exam preparation formats can aid the study pattern.

Salesforce Certified Tableau Architect Sample Questions (Q58-Q63):

NEW QUESTION # 58

When configuring Tableau Server on Linux to interact with an external email server for notifications, you encounter issues with email delivery. What is the first thing you should check to resolve this issue?

- A. Upgrading the email server to a version that is compatible with Tableau Server
- B. The email content and formatting settings in Tableau Server
- C. Changing the Tableau Server's operating system to one that is more compatible with the email server
- D. **The SMTP configuration settings in Tableau Server, including server address and port**

Answer: D

Explanation:

The SMTP configuration settings in Tableau Server, including server address and port. The first step in resolving issues with email delivery from Tableau Server to an external email server is to check the SMTP (Simple Mail Transfer Protocol) configuration settings. This includes verifying the email server address, port, and any authentication details required. Incorrect SMTP settings are a common cause of email delivery issues. Option A is incorrect because issues with email content and formatting are unlikely to affect email delivery itself. Option C is incorrect as upgrading the email server is not the first step and may not be necessary if the issue is related to SMTP settings. Option D is incorrect because changing the operating system of Tableau Server is an excessive measure and unlikely to resolve an email delivery issue.

NEW QUESTION # 59

When configuring extract encryption in Tableau Server, what consideration is important to balance security with server performance?

- A. Implementing extract encryption only for extracts accessed by a certain number of users to reduce server load
- B. Disabling extract encryption during peak usage times to avoid any potential impact on server response times
- C. **Ensuring that the server has sufficient processing power and memory to handle the additional load from encrypting and decrypting extracts**
- D. Choosing to encrypt only new extracts while keeping existing extracts unencrypted to maintain their current performance levels

Answer: C

Explanation:

Ensuring that the server has sufficient processing power and memory to handle the additional load from encrypting and decrypting extracts. When implementing extract encryption in Tableau Server, it's important to ensure that the server is equipped with adequate processing power and memory. Encrypting and decrypting extracts can impose additional load on the server, so it's crucial to balance this security feature with the server's capability to maintain optimal performance. Option A is incorrect because it creates a mixed environment where some extracts are encrypted and others are not, leading to inconsistent security practices. Option C is incorrect as disabling extract encryption during peak times undermines the purpose of having consistent security measures. Option D is incorrect because the decision to encrypt extracts should not be based on the number of users accessing them, but rather on a uniform security policy.

NEW QUESTION # 60

A corporation with critical business operations using Tableau Server needs a disaster recovery strategy. Which approach best ensures business continuity and data integrity in case of a system failure?

- A. Limiting backups to only the most important dashboards and data sources
- B. Relying solely on periodic manual backups of the Tableau Server data
- C. **Implementing a strategy that includes regular automated backups, off-site storage, and a standby Tableau Server**
- D. Using only cloud-based auto-save features without any additional backup mechanisms

Answer: C

Explanation:

Implementing a strategy that includes regular automated backups, off-site storage, and a standby Tableau Server. A comprehensive disaster recovery strategy with automated backups, off-site storage, and a standby server provides robust protection against data loss and ensures business continuity in case of a failure. Option A is incorrect because periodic manual backups may not be frequent

or reliable enough for critical business operations. Option C is incorrect as relying solely on cloud-based auto-save features doesn't provide a comprehensive recovery solution. Option D is incorrect because limiting backups to certain elements risks losing critical data not deemed 'important' at the time of backup.

NEW QUESTION # 61

During the troubleshooting of OpenID Connect integration issues in Tableau Server, what common factor should be examined?

- A. The redirection URI specified in the OpenID Connect provider and Tableau Server configuration
- B. The storage capacity on the Tableau Server for caching user tokens
- C. The load balancing configuration of the Tableau Server
- D. The encryption strength of the SSL certificate on the Tableau Server

Answer: A

Explanation:

The redirection URI specified in the OpenID Connect provider and Tableau Server configuration A common issue in OpenID Connect integration involves the redirection URI. Ensuring that the redirection URI specified in the Tableau Server configuration matches exactly with what is registered on the OpenID Connect provider is crucial. Mismatches or incorrect configurations can lead to failed authentication and redirection errors. Option A is incorrect as load balancing configurations are generally not directly related to OpenID Connect integration issues. Option C is incorrect because while SSL certificate strength is important for overall security, it is not typically the cause of OpenID Connect specific integration issues. Option D is incorrect as the storage capacity for caching user tokens is unlikely to be a significant factor in the troubleshooting of OpenID Connect integration.

NEW QUESTION # 62

In a scenario where Tableau Server on Linux is experiencing performance issues, which logs would be most useful to analyze first to diagnose the problem?

- A. The Tableau Server performance logs that include information on server processes and resource usage
- B. The database logs to assess query execution times and database performance
- C. The Linux system's boot logs to review the server startup sequence
- D. The Linux system's authentication logs to check for unauthorized access attempts

Answer: A

Explanation:

The Tableau Server performance logs that include information on server processes and resource usage When diagnosing performance issues with Tableau Server on Linux, the Tableau Server performance logs are most useful. These logs provide information on server processes, resource usage, and potential bottlenecks in server performance. Analyzing these logs can help identify specific areas that are impacting the overall performance of Tableau Server. Option A is in-correct because authentication logs are primarily used for security auditing and are less likely to provide insights into performance issues. Option C is incorrect as boot logs are useful for startup issues but not typically for ongoing performance problems. Option D is incorrect because while database logs can provide insights into database performance, they are not the first resource to check for general performance issues with Tableau Server.

NEW QUESTION # 63

.....

If you want to pass the Salesforce Analytics-Arch-201 exam on the first attempt then we suggest you start this journey with Salesforce Analytics-Arch-201 exam dumps. The Salesforce Analytics-Arch-201 PDF dumps file, practice test software, and web-based practice test software, all three Salesforce Analytics-Arch-201 Exam Questions formats are ready for download.

Real Analytics-Arch-201 Dumps: https://www.itcertkey.com/Analytics-Arch-201_braindumps.html

Salesforce Analytics-Arch-201 Quiz With the development of the internet technology, the education industry has taken place great changes, So you can also get help from Itcertkey practice test questions and make the Salesforce Analytics-Arch-201 exam preparation simple, smart and quick, Itcertkey has the most skillful Analytics-Arch-201 experts, Many candidates long for acquiring the Salesforce Analytics-Arch-201 certificate.

See the us Census Business Formation Statistics site for more data, Analytics-Arch-201 Insurance is the equitable transfer of risk from one entity to another in exchange for compensation, called a premium.

With the development of the internet technology, Analytics-Arch-201 Pdf Torrent the education industry has taken place great changes, So you can also get help from Itcertkey practice test questions and make the Salesforce Analytics-Arch-201 Exam Preparation simple, smart and quick.

High Pass-Rate Analytics-Arch-201 Quiz – Find Shortcut to Pass Analytics-Arch-201 Exam

Itcertkey has the most skillful Analytics-Arch-201 experts, Many candidates long for acquiring the Salesforce Analytics-Arch-201 certificate, The feedbacks from our customers have shown that with the help of our Analytics-Arch-201 practice questions, the pass rate has reached as high as 98%~100%, which is the highest pass rate in the IT field.
