## Fortinet FCSS - Network Security 7.4 Support Engineer Sample Questions (Q82-Q87):

NEW QUESTION # 82
Refer to the exhibit showing a debug output.

```
# diagnose debug application authd 8256
# diagnose debug enable
....
[fsae_server_init_spec:116]: num 1, idx 0, 127.0.0.1:8000 disconnect_server_only
[FSSO]: disconnecting_event_error[Local FSSO Agent]: error occurred in read: Connection refused
....
```

An administrator deployed FSSO in DC Agent Mode but FSSO is failing on FortiGate. Pinging FortiGate from where the collector agent is deployed is successful. The administrator then produces the debug output shown in the exhibit.
What could be causing this error message?

- A. The FortiGate and the collector agent are using different TCP ports.
- B. The TCP port 445 is blocked between FortiGate and collector agent.
- C. The collector agent preshared password is mismatched.
- D. The FortiGate cannot resolve the active directory server name.

**Answer: A**

Explanation:
The log shows FortiGate attempting to connect to 127.0.0.1:8000 and immediately getting
"Connection refused," which means no process is listening on that port. In DC Agent mode both sides must match on the same TCP port (default 8000), so a port mismatch will cause exactly this error.

NEW QUESTION # 83
What are two functions of automation stitches? (Choose two.)

- A. You can set an automation stitch configured to execute actions in parallel to insert a specific delay between actions.
- B. You can configure automation stitches on any FortiGate device in a Security Fabric environment.
- C. You can create automation stitches to run diagnostic commands and attach the results to an email message when CPU or memory usage exceeds specified thresholds.
- D. You can configure automation stitches to execute actions sequentially by taking parameters from previous actions as input for the current action.

**Answer: C,D**

Explanation:
Automation stitches can run actions in sequence, passing output from one action as input to the next.
They can be set to run diagnostics (e.g., CPU/memory checks) and email the results when thresholds are exceeded.

**NEW QUESTION # 84**

Refer to the exhibit, which shows the output o! the BGP database.

```

l number of prefixes 4
```

Which two statements are correct? (Choose two.)

- A. The first four prefixes are being advertised using a legacy route advertisement.
- B. The output shows all prefixes advertised by all neighbors as well as the local router.
- C. The advertised prefix of 10.20.30.0'24 was configured using the network command.
- D. The advertised prefix of 10.20.30.0'24 is being advertised through the redistribution of another routing protocol.

**Answer: B,C**

**NEW QUESTION # 85**

Refer to the exhibit, which shows a partial output of the fssod daemon real-time debug command.

```
# diagnose debug application fssod -1
# diagnose debug enable
[fsso_svr.c:save_result:579] event_id=4768, logon=bobby, d     FSSO workstation=, ip=10.124.2.90 port=49215, time=1372061722
```

What two conclusions can you draw Itom the output? (Choose two.)

- A. FSSO is using agentless polling mode to detect logon events.
- B. The workstation with IP 10.124.2.90 will be polled frequently using TCP port 445 to see if the user is still logged on.
- C. The logon event can be seen on the collector agent installed on Windows.
- D. FSSO is using DC agent mode to detect logon events.

**Answer: A,B**
