300-620考證： Implementing Cisco Application Centric Infrastructure，最快的通過考試方式是選擇我們

IT行業中很多雄心勃勃的專業人士為了在IT行業中能更上一層樓，離IT頂峰更近一步，都會選擇Cisco 300-620這個難度較高的認證考試來獲取通認證證書從而獲得行業認可。Cisco 300-620 的難度比較高所以通過率也比較低。但是報名參加Cisco 300-620 認證考試是個明智的選擇，因為在如今競爭激烈的IT行業應該要不斷的提升自己。但是您可以選擇很多方式幫你通過考試。

最新的 CCNP Data Center 300-620 免費考試真題 (Q32-Q37):

問題 #32

A customer must upgrade the Cisco ACI fabric to use a feature from the new code release. However, there is no direct path from the current release to the desired one. Based on the Cisco APIC Upgrade/Downgrade Support Matrix, the administrator must go through one intermediate release.

Which set of steps must be taken to upgrade the fabric to the new release?

- A. Upgrade the APICs to an interim release.
Upgrade the switches to an interim release.
Upgrade the APICs to the targeted release.
Upgrade the leaf and spine switches to the targeted release.
- B. Upgrade the APICs to an interim release and then switches to an interim release.
When all switches are operational, upgrade leaf switches to the targeted release.
Upgrade the spine switches to the targeted release.
Upgrade the APICs to the targeted release.
- C. Upgrade the APICs to an interim release.
Upgrade the leaf switches directly to the targeted release.
Upgrade the spine switches directly to the targeted release.
Upgrade the APICs to the targeted release.
- D. Upgrade the APICs directly to the targeted release.
Upgrade the switches to an interim release.
When all switches are operational, upgrade the leaf switches to the targeted release.
Upgrade the spine switches to the targeted release.

答案： A

問題 #33

Which new construct must a user create when configuring in-band management?

- A. management contract
- B. bridge domain
- C. management tenant
- D. VLAN pool

答案： B

解題說明：

When configuring in-band management, the new construct that must be created is a bridge domain1.

問題 #34

Which endpoint learning operation is completed on the egress leaf switch when traffic is received from an L3Out?

- A. The source MAC address of the traffic is learned as a remote endpoint.
- B. The source MAC and IP address of the traffic is learned as a local endpoint.
- C. No source MAC or IP address of the traffic is learned as a remote endpoint.
- D. The source IP address of the traffic is learned as a remote endpoint.

答案： D

解題說明：

<https://www.cisco.com/c/en/us/solutions/collateral/data-center-virtualization/application-centric-infrastructure/white-paper-c11-739989.html>

問題 #35

An endpoint called EP1 is connected to Cisco ACI compute leaf1. The engineer must replace EP1 with EP2 on the same leaf switch. Which set of actions forces all remote leaves to delete EP1 before timer expiration?

- A. Set L2 Unknown Unicast to Flood.
Select Clear remote MAC entries.
- B. Set L2 Unknown Unicast to Hardware Proxy.
Select Clear remote IP entries.
- C. Set L2 Unknown Unicast to Hardware proxy.
Select Clear remote MAC entries.
- D. Set L2 Unknown Unicast to Flood.

Select Clear remote IP entries.

答案: A

解題說明:

When the bridge domain has L2 Unknown Unicast set to Flood, if an endpoint is deleted the system deletes it from both the local leaf switches as well as the remote leaf switches where the bridge domain is deployed, by selecting Clear Remote MAC Entries. Without this feature, the remote leaf continues to have this endpoint learned until the timer expires.

問題 #36

An engineer must integrate a Cisco ACI fabric with VMware and discover an ESXi host using LLDP. Two EPGs have been created and associated with the VMM domain. The engineer must configure the ACI such that contracts are pushed to the ACI leaf switches when the VM is mapped to EPG and the contracts are removed when LLDP is disabled. Which configuration must be selected to meet these requirements?

- A. Deployment immediacy: Immediate
- B. Resolution immediacy: On-Demand
- C. Resolution immediacy: Immediate
- D. Deployment immediacy: On-Demand

答案: A

解題說明:

Immediate - Specifies that EPG policies (including contracts and filters) are downloaded to the associated leaf switch software upon ESXi host attachment to a DVS. LLDP or OpFlex permissions are used to resolve Immediate- Specifies that the policy is programmed in the hardware policy CAM as soon as the policy is downloaded in the leaf software.

On Demand - Specifies that a policy (for example, VLAN, VXLAN bindings, contracts, or filters) is pushed to the leaf node only when an ESXi host is attached to a DVS and a VM is placed in the port group (EPG).

Pre-provision - Specifies that a policy is downloaded to a leaf switch even before a VM controller is attached to the virtual switch. This pre-provisions the configuration on the switch.
