### 질문 # 135

GlobalTech, a multinational tech conglomerate, has been operating across 50 countries for the past two decades. Recently, it faced a significant data breach that affected its reputation and bottom line. As a result, the board of directors decided to overhaul its existing corporate strategy, with a pronounced focus on enhancing its Information Security Governance. The company believes that a robust governance structure would not only prevent future breaches but would also align with its long-term business objectives of expansion and dominance in the tech market. It has called upon several third-party consultants to pitch an optimal strategy for the conglomerate's unique position.

Which strategy best aligns with GlobalTech's requirement?

- A. Prioritize security audits for quarterly review.
- B. Implement a robust intrusion detection system.
- C. Formulate an isolated team for cybersecurity tasks.
- D. Establish a governance framework that integrates security considerations into all business decisions.

정답: D

### 설명:

For GlobalTech, the optimal strategy to enhance information security governance and align with long-term business objectives involves:

\* Integrated Governance Framework:

\* Security Integration: Embed security considerations into all business decisions and processes.

This ensures that security is a fundamental aspect of the company's operations and strategic planning.

\* Comprehensive Policies: Develop and enforce comprehensive security policies that cover all aspects of information security, including data protection, access controls, and incident response.

\* Executive Support:

\* Board-Level Commitment: Ensure that the board of directors and executive management are committed to and support the information security governance framework. This top-down approach is crucial for effective implementation and adherence.

\* Regular Reviews and Audits:

\* Continuous Improvement: Conduct regular security audits and reviews to assess the effectiveness of the governance framework and identify areas for improvement.

\* Security Culture:

\* Awareness and Training: Foster a culture of security awareness across the organization through regular training and awareness programs.

### 질문 # 136

Martin, a network administrator at an organization, received breaching alerts for an application.

He identified that a vulnerability in the application allowed attackers to enter malicious input.

Martin evaluated the threat severity and extent of damage that could be caused by this vulnerability. He then escalated the issue to the security management team to determine appropriate mitigation strategies. In which of the following threat-modeling steps did

Martin evaluate the severity level of the threat?

- A. Application overview
- **B. Risk and impact analysis**
- C. Decompose the application
- D. Identify vulnerabilities

**정답: B**

**설명:**

Risk and impact analysis is the threat-modeling step in which Martin evaluated the severity level of the threat in the above scenario. Threat modeling is a process that involves identifying, analyzing, and mitigating threats and risks to a system or network. Threat modeling can be used to improve the security and resilience of a system or network by applying various methods or techniques, such as STRIDE, DREAD, PASTA, etc. Threat modeling consists of various steps or phases that perform different tasks or roles. Risk and impact analysis is a threat-modeling step that involves assessing the likelihood and consequences of threats and risks to a system or network. Risk and impact analysis can be used to evaluate the severity level of threats and risks and prioritize them for mitigation. In the scenario, Martin received breaching alerts for an application. He identified that a vulnerability in the application allowed attackers to enter malicious input. Martin evaluated the threat severity and extent of damage that could be caused by this vulnerability. He then escalated the issue to the security management team to determine appropriate mitigation strategies. This means that he performed risk and impact analysis for this purpose. Identify vulnerabilities is a threat-modeling step that involves finding and documenting the weaknesses or flaws in a system or network that can be exploited by threats or risks. Application overview is a threat-modeling step that involves defining and understanding the scope, architecture, components, and functionality of a system or network. Decompose the application is a threat-modeling step that involves breaking down a system or network into smaller and simpler elements, such as data flows, processes, assets, etc.

**질문 # 138**

A software company is developing a new software product by following the best practices for secure application development. Dawson, a software analyst, is checking the performance of the application on the client's network to determine whether end users are facing any issues in accessing the application.

Which of the following tiers of a secure application development lifecycle involves checking the performance of the application?

- A. Quality assurance (QA)
- **B. Testing**
- C. Staging
- D. Development

**정답: B**

**설명:**

The testing tier of a secure application development lifecycle involves checking the performance of the application on the client's network to determine whether end users are facing any issues in accessing the application. Testing is a crucial phase of software development that ensures the quality, functionality, reliability, and security of the application. Testing can be done manually or automatically using various tools and techniques, such as unit testing, integration testing, system testing, regression testing, performance testing, usability testing, security testing, and acceptance testing.
