

権威のある4A0-D01資料勉強一回合格-信頼的な4A0-D01模擬問題集

P.S.CertShikenがGoogle Driveで共有している無料の2025 Nokia 4A0-D01ダンプ: https://drive.google.com/open?id=13Z_iCWCA5e-diXhr6jfbeU9bdKhuLmC

Nokiaの4A0-D01認定試験に受かりたいのなら、適切なトレーニングツールを選択する必要があります。Nokiaの4A0-D01認定試験に関する研究資料が重要な一部です。我々CertShikenはNokiaの4A0-D01認定試験に対する効果的な資料を提供できます。CertShikenのIT専門家は全員が実力と豊富な経験を持っているのですから、彼らが研究した材料は実際の試験問題と殆ど同じです。CertShikenは特別に受験生に便宜を提供するためのサイトで、受験生が首尾よく試験に合格することを助けられます。

Nokia 4A0-D01 認定試験の出題範囲:

トピック	出題範囲
トピック 1	Module 5 – EDA (Event Driven Automation) Introduction
トピック 2	Nokia DC Fabric Solution: This section of the exam measures skills of a Data Center Network Engineer and covers the architecture and benefits of modern Layer 3 data center networks. It includes an overview of BGP-based routing, VXLAN and EVPN overlays for multi-tenant environments, and key features of the SR Linux operating system. The section also explains how APIs are used for external configuration and introduces the Fabric Services System's management capabilities.
トピック 3	SR Linux Logging, Monitoring, and Filtering: This section of the exam measures skills of a Data Center Network Engineer and addresses how to implement logging, monitoring, and traffic filtering in SR Linux. It explains log file usage, ACL types, CPM filtering, and packet capture filters. Configuration tasks involve applying ACLs and monitoring network activity using capture tools.
トピック 4	This section of the exam measures skills of a Network Automation Specialist and introduces the principles of Event Driven Automation in SR Linux environments. It covers integration with Kubernetes and explores core use cases such as intent-based automation for fabrics and services, as well as enhanced network observability.

4A0-D01試験の準備方法 | 最高の4A0-D01資料勉強試験 | 便利なNokia Data Center Fabric Fundamentals Exam模擬問題集

CertShikenは長年にわたってずっとIT認定試験に関連する4A0-D01参考書を提供しています。これは受験生の皆

さんに検証されたウェブサイトで、一番優秀な試験4A0-D01問題集を提供することができます。CertShikenは全面的に受験生の利益を保証します。皆さんからいろいろな好評をもらいました。しかも、CertShikenは当面の市場で皆さんが一番信頼できるサイトです。

Nokia Data Center Fabric Fundamentals Exam 認定 4A0-D01 試験問題 (Q19-Q24):

質問 # 19

Which of the following statements about using BFD with BGP is FALSE?

- A. BGP is notified if several BFD control packets are missed.
- B. The BFD endpoints agree on the send/receive rate of control packets.
- C. Using BFD can speed up the BGP advertisement interval.
- D. It can help rapidly detect link failures.

正解: C

解説:

BFD helps detect link failures rapidly and notifies BGP to trigger route updates quickly, but it does not speed up the BGP advertisement interval itself. BGP advertisement intervals are controlled by BGP timers, not by BFD.

質問 # 20

Which of the following statements about the VXLAN tunneling in data centers is FALSE?

- A. VXLAN tunnel endpoints can be on hypervisors, leaf routers, or datacenter gateways.
- B. Each VXLAN tunnel endpoint is automatically assigned with a unique VNI value.
- C. VXLAN tunneling is used to provide Layer 2 connectivity between workloads over a common underlay network.
- D. EVPN routes are exchanged between VXLAN tunnel endpoints.

正解: B

解説:

VXLAN tunnel endpoints (VTEPs) are configured with VNI (VXLAN Network Identifier) values, but these VNIs are not automatically assigned; they must be explicitly configured to define Layer 2 segments.

質問 # 21

Which of the following statements about resilient ECMP load balancing is TRUE?

- A. Hash buckets are used to ensure that flows egressing the same interface on one router use different egress interfaces on downstream routers.
- B. A different hash seed is used on downstream routers to ensure that flows are randomly distributed across all eligible router interfaces.
- C. When one of the next-hops fail, only flows currently egressing to that next-hop are impacted.
- D. The hash value used to distribute traffic is calculated as a modulo function on specific fields of the packet header.

正解: C

解説:

In resilient ECMP load balancing, when a next-hop fails, only the flows that were using that specific next-hop are affected and need to be redistributed, minimizing disruption to other flows.

質問 # 22

Based on the exhibit output, which of the following is NOT the reason the user runs the "baseline diff" command?

```
A:dc-leaf-1# enter candidate private
--{ + candidate private private-admin }--[ ]--
A:dc-leaf-1# interface lol subinterface 0 ipv4 address 200.1.1.1/32
--{ +* candidate private private-admin }--[ interface lol subinterface 0 ipv4 address
200.1.1.1/32 ]--
A:dc-leaf-1#
--{ +! candidate private private-admin }--[ ]--
A:dc-leaf-1# baseline diff
    interface ethernet-1/1 {
-        admin-state disable
    }
```

- A. User admin notices that "!" appears in the CLI prompt.
- B. User admin wants to check if there are differences between the current running config and their baseline datastore.
- C. Another user has committed changes.
- D. User admin is not able to commit their changes.

正解: D

解説:

The "baseline diff" command is used to compare the candidate configuration against the baseline datastore to see changes or conflicts, especially when multiple users are involved or to verify differences. It does not indicate that the user is unable to commit changes.

質問 # 23

Which of the following is NOT one of the characteristics of Nokia's SR Linux?

- A. It uses mature and stable SNMP protocol to access the command line interface.
- B. It includes a NetOgs development kit that supports the integration of third-party applications.
- C. It uses an unmodified Linux kernel that simplifies the use of third party applications.
- D. It uses a modular, state-driven architecture that gives applications efficient access to system information.

正解: A

解説:

Nokia's SR Linux does not rely on the SNMP protocol for accessing the command line interface; instead, it uses modern, programmable interfaces aligned with its modular architecture.

質問 # 24

.....

私たちの努力は自分の人生に更なる可能性を増加するためのことであると思われれます。あなたは弊社 CertShikenのNokia 4A0-D01試験問題集を利用し、試験に一回合格しました。Nokia 4A0-D01試験認証証明書を持つ皆様は面接のとき、他の面接人員よりもっと多くのチャンスがあります。その他、4A0-D01試験認証証明書も仕事昇進にたくさんのメリットを与えられます。
