Our web-based practice exam software is an online version of the Google Cloud-Digital-Leader practice test. It is also quite useful for instances when you have internet access and spare time for study. To study and pass the certification exam on the first attempt, our Google Cloud-Digital-Leader Practice Test software is your best option. You will go through Google Cloud-Digital-Leader exams and will see for yourself the difference in your preparation.

iPassleader will provides the facility of online chat to all prospective customers to discuss any issue regarding, different vendors' certification tests, Cloud-Digital-Leader exam materials, discount offers etc. Our efficient staff is always prompt to respond you. If you need detailed answer, you send emails to our customers' care department, we will help you solve your problems as soon as possible. You will never regret to choose Cloud-Digital-Leader Exam Materials.

How to Crack the Challenging Google Cloud-Digital-Leader Exam Easily and Quickly?

It is convenient for our consumers to check Google Cloud-Digital-Leader exam questions free of charge before purchasing the Google Cloud-Digital-Leader practice exam. Google is an excellent platform where you get relevant, credible, and unique Google Cloud-Digital-Leader Exam Dumps designed according to the specified pattern, material, and format as suggested by the Google Cloud-Digital-Leader exam.

The Google Cloud-Digital-Leader exam covers a wide range of topics, including cloud computing basics, Google Cloud Platform architecture, data management, machine learning, security, and compliance. It is a comprehensive exam that requires a deep understanding of Google Cloud technologies and their applications in real-world scenarios. Passing Cloud-Digital-Leader Exam demonstrates your ability to lead digital initiatives and drive innovation using Google Cloud technologies, making you a valuable asset to any organization looking to leverage the power of the cloud to drive growth and success.

Google Cloud Digital Leader Sample Questions (Q29-Q34):

NEW QUESTION # 29

What are the key features of Google Cloud Identity.

- A. Works with your favorite apps and Endpoint management
- B. Multi-factor authentication (MFA)
- C. Single sign-on (SSO)
- D. All of the Above

Answer: D

Explanation:

Cloud Identity:

A unified identity, access, app, and endpoint management (IAM/EMM) platform.

- Give users easy access to apps with single sign-on.
- Multi-factor authentication protects user and company data.
- Endpoint management enforces policies for personal and corporate devices

KEY FEATURES :

Modernize IT and strengthen security

Multi-factor authentication (MFA)

Help protect your user accounts and company data with a wide variety of MFA verification methods such as push notifications, Google Authenticator, phishing-resistant Titan Security Keys, and using your Android or iOS device as a security key.

Endpoint management

Improve your company's device security posture on Android, iOS, and Windows devices using a unified console. Set up devices in minutes and keep your company data more secure with endpoint management. Enforce security policies, wipe company data, deploy apps, view reports, and export details.

Single sign-on (SSO)

Enable employees to work from virtually anywhere, on any device, with single sign-on to thousands of pre-integrated apps, both in the cloud and on-premises.

Works with your favorite apps

Cloud Identity integrates with hundreds of cloud applications out of the box-and we're constantly adding more to the list so you can count on us to be your single identity platform today and in the future.

NEW QUESTION # 30

Why is data stored in Google Cloud secure and private?

- A. Data is encrypted when an appropriate tag is applied
- **B. Data is encrypted by default**
- C. Data is encrypted by Cloud Data Loss Prevention
- D. Data is encrypted by the Security Command Center

Answer: B

Explanation:

<https://cloud.google.com/docs/security/encryption/default-encryption#:~:text=Google%20uses%20the%20Advanced%20Encryption,to%202015%20that%20use%20AES128>

NEW QUESTION # 31

Which of the following is true while creating a boot persistent disk from a snapshot.

- **A. All of the above.**
- B. After you create a snapshot of a boot persistent disk, you can apply data from that snapshot to new persistent disks.
- C. You cannot apply a snapshot to an existing persistent disk, or apply a snapshot to persistent disks that belong to a different project than that snapshot.
- D. It is only possible to apply data from a snapshot when you first create a persistent disk.

Answer: A

Explanation:

When you create a virtual machine (VM) instance, you must also create a boot disk for the VM. You can use a public image, a custom image, or a snapshot that was taken from another boot disk. When you create a boot disk, limit the disk size to 2 TB to account for the limitations of MBR partitioning.

Compute Engine automatically creates a boot persistent disk when you create an instance. If you require additional data storage space for your instances, add one or more secondary instance storage options.

You might need to create a standalone boot persistent disk and attach it to an instance later, or resize a boot persistent disk to improve performance and add more space for additional applications or operating system files. That process is described in Add or resize a persistent disk.

As a best practice, do not use regional persistent disks for boot disks. In a failover situation, they do not force-attach to a VM.

After you create a snapshot of a boot persistent disk, you can apply data from that snapshot to new persistent disks. It is only possible to apply data from a snapshot when you first create a persistent disk. You cannot apply a snapshot to an existing persistent disk, or apply a snapshot to persistent disks that belong to a different project than that snapshot.

NEW QUESTION # 32

An IoT platform is providing services to home security systems. They have more than a million customers, each with many home devices. Burglaries or child safety issues are concerns that the clients customers. Therefore, the platform has to respond very quickly in near real time. What could be a typical data pipeline used to support this platform on Google Cloud?

- A. Cloud Pub/Sub, Cloud Dataflow, Data Studio
- B. Cloud Pub/Sub, Cloud Dataflow, BigQuery
- C. Cloud Functions, Cloud Dataproc, BigQuery
- D. Cloud Functions, Cloud Dataproc, Looker

Answer: A

Explanation:

=> Cloud Pub/Sub- Cloud Pub/Sub is the best to be the end-point for ingesting large amounts of data. It will grow as required, can stream data to downstream systems, and can also work with intermittently available backends.

=> Cloud Dataflow- supports streaming data and therefore is an appropriate option for processing the data that is ingested.

=> BigQuery- BigQuery also supports streaming data and its possible to do real time ana-lytics on it.

=> DataStudio- DataStudio and Looker are for visualization. They don't have any in-built analysis.

=> Cloud Functions- Cloud Functions is a useful serverless endpoint. However, Pub/Sub is better in this case because it can also retain messages for a set period if it was not possi-ble to deliver it first time.

=>Cloud Dataproc- Cloud Dataproc is used for Hadoop/Spark workloads and won't be a good fit here.

NEW QUESTION # 33

Your organization runs many workloads in different Google Cloud projects, each linked to the same billing account. Each project's workload costs can vary from month to month, but the overall combined cost of all projects is relatively stable. Your organization needs to optimize its cost.

What should your organization do?

- A. Turn on committed use discount sharing, and create a commitment for the combined usage
- B. Move all workloads from all different projects into one single consolidated project
- C. Purchase a commitment per project for each project's usual minimum
- D. Create a billing account per project, and link each project to a different billing account

Answer: A

Explanation:

Turn on committed use discount sharing, and create a commitment for the combined usage Sharing your committed use discounts across all your projects reduces the overhead of managing discounts on a per-project basis, and maximizes your savings by pooling all your discounts across your projects' resource usage. If you have multiple projects that share the same Cloud Billing account, you can enable committed use discount sharing so all of your projects within that Cloud Billing account share all of your committed use discount contracts. Your sustained use discounts are also pooled at the same time. That is, sustained use discounts are calculated using the total resources across these projects, rather than just the resources within a single project.

NEW QUESTION # 34

.....

In today's society, everyone wants to find a good job and gain a higher social status. As we all know, the internationally recognized Cloud-Digital-Leader certification means that you have a good grasp of knowledge of certain areas and it can demonstrate your ability. This is a fair principle. But obtaining this Cloud-Digital-Leader certificate is not an easy task, especially for those who are busy every day. We do not charge extra service fees, but the service quality is high. Your satisfaction is the greatest affirmation for us and we sincerely serve you. Our Cloud-Digital-Leader Exam Guide deliver the most important information in a simple, easy-to-understand language that you can learn efficiently learn with high quality. Whether you are a student or an in-service person, our Cloud-Digital-Leader exam torrent can adapt to your needs.
