Guidewire ClaimCenter-Business-Analysts Prüfungsplan:

Thema	Einzelheiten
Thema 1	<ul style="list-style-type: none"> Claim Center Data Model and Adjudication: This domain examines ClaimCenter's data model architecture, claim setup, adjudication processes, financial terminology and concepts, and payment creation procedures.
Thema 2	<ul style="list-style-type: none"> Claim Center Financials Transactions: This section covers financial controls including payment approvals and holds, contact and vendor management, service request handling, and security framework with permissions and access control lists.
Thema 3	<ul style="list-style-type: none"> Behavior Driven Development at Guidewire: This section introduces BDD methodology and its application in Guidewire implementations, focusing on collaborative development approaches and writing clear, testable requirements using BDD principles.
Thema 4	<ul style="list-style-type: none"> Quality Analyst Basics: This domain covers quality assurance fundamentals including driving quality throughout development, integrating quality from inception, risk assessment and mitigation, test strategy selection, and defect management processes.
Thema 5	<ul style="list-style-type: none"> InsuranceSuite Analyst Fundamentals: This domain covers InsuranceSuite platform fundamentals including user interface, data model, application logic, integration mechanisms, and hands-on workshop exercises for practical application.

Guidewire ClaimCenter Business Analyst - Mammoth Proctored Exam ClaimCenter-Business-Analysts Prüfungsfragen mit Lösungen (Q16-Q21):

16. Frage

An Adjuster at Succeed Insurance increases the reserve on a claim's exposure from \$1,000 to \$1,500 to account for inflation in repair costs. A week later, a Supervisor reviews the claim and wants to know specifically who made this change, the exact date and time it was made, and what the previous value was.

The Supervisor needs a chronological audit trail of changes to the claim file without navigating through complex financial ledgers. Which screen in the ClaimCenter user interface should the Supervisor access to find this information?

- A. Financials > Transactions
- B. Notes
- C. Loss Details > Status
- **D. History**

Antwort: D

17. Frage

Succeed Insurance has a strategic initiative to change auto insurance into a pay-as-you-drive model... When claims are processed, claimants must provide the log from the application for the date of incident. The log's details are essential to validation and analysis of the monitoring system's activity at the time of the incident.

Without the application log, claims should not be processed to indemnification.

Executives say the implementation team must maintain the base product functionality where appropriate and only change those things essential to the success of the initiative...

Which two requirements are in scope based on the guiding principles? (Choose two.)

- A. As an Adjuster, the insured application log must be received, reviewed, and attached to the claim to analyze and validate the monitoring systems activity at the time of the claim.
- B. As an Adjuster, vehicle mileage/kilometers must be captured during adjudication to track mileage /kilometers, and potentially prevent fraudulent activities.
- C. As an Adjuster, the system should prevent indemnification of claimants if the application log has not been provided and reviewed to prevent payments without validation.
- D. As a business, integration to the top five vehicle manufacturers must be completed to maximize accuracy of claim processing. Succeed intends to complete one integration every 30 days.

Antwort: A,C

Begründung:

When defining scope based on specific strategic initiatives and guiding principles (such as "only change those things essential"), the Business Analyst must map requirements directly to the stated business rules and critical success factors.

* Requirement D (Log Intake):The scenario explicitly states:"The log's details are essential to validation and analysis... claimants must provide the log."Option D directly captures this by requiring the log to be received, reviewed, and attached. This is the core data intake requirement.

* Requirement C (Validation Rule):The scenario states:"Without the application log, claims should not be processed to indemnification."Option C directly maps to this business rule. It utilizes base product capabilities (Validation Rules) to enforce the "No Log, No Pay" constraint, ensuring the initiative's security and validity.

Why other options are incorrect:

* Option B (OEM Integration):The scenario mentions leveraging integration "where possible," but creates a requirement for "application logs," not direct integration with "top five vehicle manufacturers." Adding a rigid schedule ("one integration every 30 days") is a high-cost, high- complexity constraint that contradicts the principle of maintaining base functionality and minimizing cost/maintenance unless explicitly required.

* Option A (Mileage):While mileage is part of the concept, theessentialrequirement described for the claim process is thevalidation of the logfor the incident. Tracking mileage is secondary to the critical path of validating the accident data via the log.

18. Frage

Satisfied with the outcome of a Requirements Workshop, a Business Analyst (BA) attributed the success to preparation. The assigned task had been to document the requirements for capturing details on vehicle incidents for Personal Auto.

* Before the session, the BA reviewed ClaimCenter functionality by creating a new Personal Auto Claim involving physical damage to a vehicle.

* During review, the BA saw that ClaimCenter did not have a graphical representation of a vehicle with clickable hot spots to identify the damage areas like they have in their current application.

* Upon further research, the BA found that Guidewire does offer this functionality and even provides a Graphical Incident Capture Accelerator to ease implementation.

* During the workshop, the BA was able to clearly present all options for capturing vehicle incident details. Instead of having to develop the Vehicle Incident Capture functionality from scratch, the team was able to make a quick decision to add this functionality and end the meeting 30 minutes early.

Which two outcomes demonstrate the importance of preparing for a Requirements Workshop by becoming familiar with the features and functionality of ClaimCenter? (Choose two.)

- A. The BA prevented the team from rebuilding something in a less effective way.
- B. The BA was able to gain team acceptance of the base product process instead of the legacy system process.
- C. The BA was able to make decisions in advance about where gaps existed and where changes were needed.
- D. The BA was able to compare their legacy process to how ClaimCenter handles the same business process.

Antwort: A,D

Begründung:

This scenario highlights the value of Feature Knowledge and Gap Analysis during preparation.

* Prevention of unnecessary work (Option A):Because the BA researched and found the "Graphical Incident Capture Accelerator," the team avoided the costly mistake of deciding to "develop the... functionality from scratch." This is a direct outcome of the BA's preparation preventing an inefficient custom build.

* Comparison of Legacy vs. New (Option B):The text details that the BA "reviewed ClaimCenter functionality" and explicitly noted the difference ("saw that ClaimCenter did not have... like they have in their current application"). This ability to articulate the gap between theAs-Is(Legacy) and theTo-Be (Base ClaimCenter) allowed the BA to present the Accelerator as the perfect bridge solution.

Why other options are incorrect:

* Option C: The team did not accept the "base product process" (which lacked the graphics); they accepted the Accelerator (an add-on) to match the legacy expectation of clickable hot spots.

* Option D: The decision was not made "in advance." The text states the team made the "quick decision" during the workshop. The preparation enabled the team's decision, but the BA did not make it unilaterally beforehand.

19. Frage

Whenever the Total Loss Calculator determines that a vehicle is a total loss, Succeed Insurance wants to create a custom history event with the exposure name and total loss score.

□ Which step in the claim setup process flow must be completed before the history event can be created?

- A. Add a new step before the Vehicle Incident step to create the history event.
- **B. Add a new step after the Total Loss Calculator to create the history event.**
- C. Add a new step before the Total Loss Calculator to create the history event.
- D. Add a new step after the Vehicle Incident step to create the history event.

Antwort: B

Begründung:

250 to 350 words From Exact Extract of Guidewire ClaimCenter Business Analyst documentation:

In Guidewire ClaimCenter workflow analysis and configuration, defining the correct sequence of operations is critically dependent on Data Availability and Data Dependency.

The specific requirement here dictates that the custom history event must capture the Total Loss Score. In the context of the ClaimCenter object model and process flow, the Total Loss Score is an output value generated specifically by the Total Loss Calculator engine. Before this calculator runs, the score attribute is effectively null or non-existent.

Therefore, to satisfy the business requirement, the step that writes the history event must be placed after the step that generates the data it needs to record.

* Process Logic: If the Business Analyst were to place the history event creation step before the Total Loss Calculator (Option B) or before the Vehicle Incident (Option D), the system would attempt to write a record containing a score that has not yet been calculated. This would result in either a system error or a history event with a blank/zero value, failing to meet the business requirement.

* Dependency Chain: The workflow dependency is: Vehicle Data Entry -> Total Loss Calculation -> Score Generation -> History Event Creation.

* Implementation Note: In a typical Guidewire implementation, this logic is often handled via "Event Fired" rules or specific "Exit Points" in the workflow. The system waits for the confirmation that the Total Loss calculation service has successfully returned a result. Once that transaction is committed and the score is persisted on the Vehicle or Exposure entity, the subsequent rule to generate the History Event can trigger successfully.

Consequently, Option C is the only viable placement in the process flow. It ensures that the prerequisite action (calculation) is complete and the required data payload (the score) is available for the subsequent action (logging the history event).

20. Frage

What is a reason to assign a unique identification number to each User Story Card in ClaimCenter implementation projects?

- A. The number identifies total time estimated for building out the related User Story.
- B. The number provides the primary means for organizing tasks in backlog.
- C. The number helps to identify accepted and rejected Acceptance Criteria on Burndown Charts.
- **D. The number is used in the naming convention of: Product - Theme - Subtheme - ID number.**

Antwort: D

Begründung:

In Guidewire implementation methodology (such as SurePath), traceability and organization are maintained through strict naming conventions.

* Naming Convention (Option C): A unique identification number is assigned to every User Story Card to create a consistent naming structure: Product - Theme - Subtheme - ID. (For example: CC - FNOL - Vehicle - 001).

* Purpose: This convention allows Business Analysts, Developers, and QA testers to easily reference, search, and trace requirements across different tools (e.g., from the Story Card in Excel/Jira to the code in Studio and the test cases in the testing suite).

* Why not A, B, or D? Time estimation (A) uses "Story Points," not the ID. Burndown charts (B) track velocity/points, not criteria IDs. Backlogs (D) are organized by Business Value/Priority, not just numerically by ID.
