Explanation:

Defect recording in SAP QM (e.g., transaction QF01 or QE51N) is tied to specific objects:

* Inspection Lots (A): Defects are recorded directly against an inspection lot (e.g., during results recording), linking to the lot's context (e.g., material, supplier).

* Inspection Characteristics (B): Within an inspection lot, defects can be recorded at the characteristic level (e.g., a specific MIC fails), allowing detailed defect analysis.

* Business Partners (C): Defects aren't recorded against suppliers/customers directly; they're tied to lots or notifications.

* Quality Certificates (D): Certificates document results, not serve as objects for defect recording.
