The Open Group OGEA-101認定試験に関連する最高な過去問問題集

JPNTestは、最新のOGEA-101試験トレンドが能力を強化し、OGEA-101試験に合格して認定を取得するのに非常に役立つと深く信じています。嫌がらせから抜け出すために、OGEA-101学習教材は高品質で高い合格率を備えています。ほとんどの時間インターネットにアクセスできない場合、どこかに行く必要がある場合はオフライン状態ですが、OGEA-101試験のために学習したい場合、当社のウェブサイトは、優れたOGEA-101試験問題の助けを借りて問題の解決に役立ちます。

The Open Group OGEA-101 認定試験の出題範囲:

トピック	出題範囲
トピック 1	<ul style="list-style-type: none">ADM Phase Requirements: This topic of the TOGAF Enterprise Architecture Part 1 exam focuses on the specific requirements for each ADM phase, including stakeholder identification and architecture scope definition. It measures the ability of aspiring TOGAF Practitioner to apply these requirements in real-world scenarios.
トピック 2	<ul style="list-style-type: none">Introduction to the Architecture Development Method (ADM): The ADM is central to TOGAF, outlining a structured approach to developing and managing enterprise architecture. This section assesses comprehension of TOGAF practitioners about the ADM phases and their application, ensuring they grasp the method's iterative nature, which is vital for the OGEA-101 exam.

トピック 3	<ul style="list-style-type: none"> Architecture Vision: Aspiring TOGAF practitioners learn to develop an architecture vision that aligns with business goals and drivers. This topic evaluates the skills in articulating a clear and compelling vision, a necessary competency for successfully navigating the OGEA-101 exam and implementing enterprise architecture.
トピック 4	<ul style="list-style-type: none"> Implementation Governance: This topic of The Open Group OGEA-101 exam emphasizes the governance framework for architecture implementation, including compliance processes. It measures the understanding of TOGAF practitioners about governance principles, a key competency for the OGEA-101 exam.
トピック 5	<ul style="list-style-type: none"> Architecture Content Framework: Candidates learn about the TOGAF content metamodel and architecture artifacts. This topic of the OGEA-101 exam measures their understanding of content organization and documentation.

The Open Group TOGAF Enterprise Architecture Part 1 Exam 認定 OGEA-101 試験問題 (Q162-Q167):

質問 # 162

Complete the following sentence. In the ADM documents which are under development and have not undergone any formal review and approval process are_____.

- A. Called "draft"
- B. In between phases
- C. Invalid
- D. Known as "Version 0.1"

正解: A

解説:

In the ADM documents which are under development and have not undergone any formal review and approval process are called "draft". This indicates that they are subject to change and refinement as the architecture development progresses. Reference: The TOGAF Standard | The Open Group Website, Section 4.2.5 Architecture Deliverables.

質問 # 163

What is an objective of the ADM Preliminary Phase?

- A. To develop a vision of the business value to be delivered by the proposed enterprise architecture
- B. To obtain approval for the Statement of Architecture Work
- C. To select and implement tools to support the Architecture Capability
- D. To create the initial version of the Architecture Roadmap

正解: C

解説:

The Preliminary Phase is the preparatory phase of the Architecture Development Method (ADM) cycle, which sets the context and direction for the architecture work. One of the objectives of this phase is to select and implement tools to support the Architecture Capability, which is the ability of an organization to perform enterprise architecture effectively and efficiently. Tools can include software applications, methods, techniques, standards, and frameworks that assist the architecture development and governance processes. The selection and implementation of tools should be based on the requirements and constraints of the organization, and the alignment with the Architecture Principles and the Architecture Vision³ References: 3: The TOGAF Standard, Version 9.2, Part II: Architecture Development Method (ADM), Chapter 6: Preliminary Phase : The TOGAF Standard, Version 9.2, Part VI: Architecture Capability Framework, Chapter 45: Establishing and Maintaining an Enterprise Architecture Capability : The TOGAF Standard, Version 9.2, Part VI: Architecture Capability Framework, Chapter 46: Tools for Architecture Development

質問 # 164

Consider the following descriptions of deliverables consumed and produced across the TOGAF ADM cycle.

* General rules and guidelines, intended to be enduring and seldom amended, that inform and support the way in which an

organization sets about fulfilling its mission

* The joint agreements between development partners and sponsors on the deliverables, quality, and fitness-for-purpose of an architecture

* A document that is sent from the sponsoring organization to the architecture organization to trigger the start of an architecture development cycle

* A set of quantitative statements that outline what an implementation project must do in order to comply with the architecture

Complete the sentence. Deliverable 1 is an output from the _____, deliverable 2 can occur _____.

- A. Phase A, in Requirements Management
- **B. Preliminary Phase, at various stages of the ADM**
- C. Phase A, once an architecture has been defined
- D. Preliminary Phase, in Phase E

正解: B

解説:

Deliverable 1 refers to Architecture Principles. In TOGAF, Architecture Principles are established as part of the Preliminary Phase, where the enterprise prepares the architecture capability, defines the framework and governance approach, and sets the foundational rules that will guide architecture work. These principles are intended to be enduring and stable, which matches the wording in the question exactly.

Deliverable 2 refers to Architecture Contracts. In TOGAF, Architecture Contracts are formal agreements between development partners and sponsors concerning the deliverables, quality expectations, and fitness-for-purpose of the architecture. These contracts are not limited to a single phase only. They may be initiated and refined at various stages of the ADM, especially wherever there is a need to formalize agreement between architecture and implementation organizations. Although they are strongly associated with implementation governance, the concept is broader and can appear across the ADM lifecycle depending on governance needs. The other answer options are incorrect because Architecture Principles are not outputs of Phase A, and Architecture Contracts are not restricted only to Phase E or Requirements Management. Therefore, the correct completion is that deliverable 1 is from the Preliminary Phase, and deliverable 2 can occur at various stages of the ADM.

質問 # 165

Which of the following matches the Architecture Capability component of the Architecture Repository?

- * A record of governance activity across the enterprise
- * The architectural representation of assets in use or planned
- * The parameters, structures, and processes to support governance of the Repository
- * The standards with which new architectures must comply
- * The authorized change requests from the Architecture Board

- A. A record of governance activity across the enterprise.
- **B. The parameters, structures, and processes to support governance of the Repository.**
- C. The architectural representation of assets in use or planned.
- D. The standards with which new architectures must comply.

正解: B

解説:

Within the TOGAF Architecture Repository, the Architecture Capability component contains the organizational and governance support needed to operate the repository and the architecture function effectively. This includes the parameters, structures, roles, processes, and control mechanisms that allow the repository and architecture practice to be governed in a disciplined way. Because of that, option D is the correct match.

The other descriptions relate to different repository components. "The architectural representation of assets in use or planned" belongs more closely to the Landscape Repository, which captures current and planned architecture assets. "The standards with which new architectures must comply" corresponds to the Standards Information Base, where relevant standards and rules are maintained. "A record of governance activity across the enterprise" aligns with the Governance Log, which tracks governance-related actions and decisions.

"Authorized change requests from the Architecture Board" would be treated as governance-controlled change information rather than the Architecture Capability itself.

TOGAF distinguishes the Architecture Capability from the content held in the repository because capability is about how architecture is governed and supported, not only what architecture content is stored. Therefore, the correct answer is the parameters, structures, and processes to support governance of the Repository, which is option D.

質問 # 166

In the ADM, what is the name for a document deliverable that has completed a review and is approved?

- A. approved
- B. version 0.9
- C. final
- D. ratified

正解: C

解説:

Comprehensive and Detailed Explanation

In the TOGAF ADM, deliverables go through a lifecycle of development, review, approval, and usage.

TOGAF distinguishes between draft deliverables (work-in-progress) and final deliverables (those that have been formally reviewed and signed off).

* Draft deliverables are produced as working versions of the required outputs in each ADM phase.

These may carry version labels such as 0.1, 0.5, 0.9, etc., and are subject to stakeholder review and refinement.

* Once the document has been reviewed and approved by the relevant stakeholders (e.g., Architecture Board, governance bodies), it becomes a final deliverable.

* Final deliverables are baseline-controlled items and are formally stored in the Architecture Repository as an approved architecture artifact.

Thus, the correct term for a deliverable that has completed review and is approved is "final".

Why the other options are incorrect

* B. Approved: While true in general language, TOGAF uses the formal term "final deliverable", not "approved deliverable."

* C. Ratified: This term is not used in TOGAF to describe the state of a deliverable.

* D. Version 0.9: This is a draft numbering convention, not the status of an approved deliverable.
