C_TS470_2412 New Dumps Files - Free PDF C_TS470_2412 - First-grade SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service Latest Test Simulations

You won't need anything else if you prepare for the exam with our SAP C_TS470_2412 Exam Questions. Our experts have

prepared SAP C_TS470_2412 dumps questions that will eliminate your chances of failing the exam. We are conscious of the fact that most of the candidates have a tight schedule which makes it tough to prepare for the SAP C_TS470_2412 Exam Preparation.

SAP C_TS470_2412 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Organizational Data: This section of the exam measures the skills of Enterprise Data Managers and covers the structuring and management of organizational data within SAP systems. It focuses on defining key organizational elements, configuring data hierarchies, and ensuring proper integration across business units. Mastery of this domain is essential for maintaining accurate reporting structures, workflow efficiency, and compliance with enterprise-wide data governance policies.
Topic 2	<ul style="list-style-type: none">Service Master Data: This section of the exam measures the skills of SAP Master Data Specialists and covers the management and configuration of service-related master data within SAP environments. It includes defining service objects, managing attributes, and ensuring accurate data flow across modules. Effective service master data management helps improve service delivery, optimize resource utilization, and maintain consistency across business processes.
Topic 3	<ul style="list-style-type: none">Service Order Management: This section of the exam measures the skills of SAP Service Operations Consultants and covers the end-to-end management of service orders within SAP. It includes the creation, processing, tracking, and fulfillment of service requests, ensuring seamless coordination between departments. Proper service order management enables organizations to enhance customer satisfaction, streamline operations, and improve response times through integrated workflows.
Topic 4	<ul style="list-style-type: none">Managing Clean Core: This section of the exam measures the skills of SAP Solution Architects and covers the principles of maintaining a clean core within SAP systems. It focuses on strategies for minimizing customizations, leveraging standard SAP functionalities, and ensuring system integrity while allowing for necessary extensions. The goal is to enhance system performance, ease upgrades, and maintain long-term sustainability.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service Sample Questions (Q70-Q75):

NEW QUESTION # 70

In the service order, which reference objects can you assign on service item level? Note: There are 2 correct answers to this question.

- A. Counter
- B. Product
- C. Installed base
- D. Serial number

Answer: C,D

Explanation:

In a service order, reference objects at the item level specify what's being serviced. The correct answers are installed base (B) and serial number (C).

* Installed base (B): An installed base (IBASE) groups technical objects (e.g., a customer's system), assignable to a service item for context.

* Serial number (C): Identifies a specific instance of a material/equipment, linked to the item for tracking.

Why Not the Others?

* Counter (A): Used for measurements, not a reference object.

* Product (D): A material, not a reference object like IBASE or serial.

"Reference objects at the service item level include installed base and serial number."

NEW QUESTION # 71

When using a configurable service product in the service contract, which condition type is used to reflect the price of the selected configuration?

- **A. VA00 (Variant Price)**
- B. 871 (Service Type (Abs.))
- C. PSI1 (Price f. Srv. Cntr. Itm)
- D. VASE (Variant Price)

Answer: A

Explanation:

In SAP S/4HANA Cloud Private Edition, Service, a configurable service product in a service contract uses variant configuration to allow customization (e.g., selecting specific service options). The pricing for the selected configuration is reflected using the condition type VA00 (Variant Price) (Option B).

VA00 is a standard condition type in SAP's pricing framework that adjusts the base price based on the chosen configuration variants. It is linked to the variant configuration profile and updates the contract item price dynamically.

* VASE (A): This is not a standard SAP condition type; it seems to be a typo or misinterpretation.

* 871 (C): This is not a recognized condition type for configurable products in service contracts.

* PSI1 (D): This might relate to service contract items but is not specific to configurable product pricing.

"The condition type VA00 (Variant Price) is used in service contracts with configurable products to reflect the price adjustments based on the selected configuration."

NEW QUESTION # 72

What are examples of customizing activities required for an in-house repair process? Note: There are 3 correct answers to this question.

- **A. Enable Item-Based Accounting for Service Management**
- **B. Define Number Ranges**
- C. Define Derivation of Attendance Type, Activity Type, and Cost Element
- **D. Define Basic Settings for Transactions**
- E. Define Partner Determination Procedure

Answer: A,B,D

Explanation:

The in-house repair process (scope item 3XK) in SAP S/4HANA Cloud Private Edition requires specific customizing activities to set up the system:

* Enable Item-Based Accounting for Service Management: This is critical for in-house repair to activate item-level cost and revenue tracking, ensuring accurate financial postings for repair orders.

* Define Basic Settings for Transactions: This includes configuring transaction types (e.g., REPA for repair orders) and item categories, which are foundational for processing in-house repairs.

* Define Number Ranges: Number ranges must be defined for repair orders and related documents to ensure unique identification and proper document flow.

* Define Derivation of Attendance Type, Activity Type, and Cost Element: This is more relevant to time recording or project accounting, not a core requirement for in-house repair.

* Define Partner Determination Procedure: While useful, it's not mandatory for the basic in-house repair process setup. These activities are outlined in the SAP Best Practices for in-house repair configuration. "Customizing for in-house repair includes enabling item-based accounting, defining transaction settings, and setting up number ranges." (SAP Signavio Process Navigator, In-House Repair).

NEW QUESTION # 73

What does the repair order status "Released" mean?

- **A. The repair object is ready to be scheduled for repair**
- B. The repair object has been scheduled for repair
- C. This is the initial status of all repair orders
- D. The repair object has been sent back to the customer

Answer: A

Explanation:

In an in-house repair process, the repair order status "Released" (e.g., REPO transaction type) has a specific meaning. Let's dive in.

Released Status:

"Released" (system status REL) means the repair order is approved and ready to be scheduled for repair. It's a preparatory step, allowing planning (e.g., resource allocation) before execution begins.

Why Not the Others?

* A: Scheduling happens after release, not indicated by it.

* B: Initial status is "Created" (CRTD), not "Released."

* C: Return to customer is a later status (e.g., "Completed").

Flow:

Created # Released (ready to schedule) # In Process # Completed.

"The 'Released' status indicates the repair object is ready to be scheduled for repair."

NEW QUESTION # 74

Which of the following is the correct sequence when creating a hierarchical structure in organizational management?

- A. Position # Holder # User # Organizational unit
- **B. Organizational unit # Position # Holder # User**
- C. Position # User # Organizational unit # Holder
- D. Organizational unit # Holder # User # Position

Answer: B

Explanation:

In SAP S/4HANA Organizational Management (integrated with HCM or service structures):

* Organizational unit # Position # Holder # User: The sequence starts with defining an organizational unit (e.g., department), then positions within it (e.g., service technician), followed by assigning holders (employees) to positions, and finally linking users (system logins) to holders. This hierarchy is built using transaction PPOME or similar tools.

* Other sequences disrupt the logical top-down structure required for organizational management. This aligns with SAP's standard organizational setup process. "Create organizational units, then positions, assign holders, and link users in that order for a hierarchical structure." (SAP Help Portal, Organizational Management).

NEW QUESTION # 75

.....

We have three versions for your practice according to your study habit. The pdf version is for you to print the C_TS470_2412 Dump pdf out and you can share your C_TS470_2412 exam dumps with your friends and classmates. The test engine version enables you feeling the atmosphere of formal test because it is a simulation of real test. The soft version is same as the test engine but it allows you to practice your SAP Certified Associate real dumps in any electronic equipment.
