## Pdf AI-102 Pass Leader | AI-102 Certification Dumps

In addition to the comprehensive Microsoft AI-102 practice exams, our product also includes Designing and Implementing a Microsoft Azure AI Solution (AI-102) PDF questions developed by our team to help you get prepared in a short time. Our Prepare for your Designing and Implementing a Microsoft Azure AI Solution (AI-102) PDF format works on all smart devices without limits of time and place.

## Microsoft Designing and Implementing a Microsoft Azure AI Solution Sample Questions (Q194-Q199):

### NEW QUESTION # 194

You are building a model to detect objects in images.

The performance of the model based on training data is shown in the following exhibit.

□

**Answer:**

Explanation:

□

Explanation

□

### NEW QUESTION # 195

You are building an AI solution that will use Sentiment Analysis results from surveys to calculate bonuses for customer service staff. You need to ensure that the solution meets the Microsoft responsible AI principles.

What should you do?

- A. Add a human review and approval step before making decisions that affect the staff's financial situation
- B. Publish the raw survey data to a central location and provide the staff with access to the location.
- C. Include the Sentiment Analysis results when surveys return a low confidence score.
- D. Use all the surveys, including surveys by customers who requested that their account be deleted and their data be removed.

**Answer: A**

Explanation:

This question aligns with Microsoft Responsible AI principles (Fairness, Reliability & Safety, Privacy & Security, Inclusiveness, Transparency, and Accountability).

The scenario:

- \* Sentiment Analysis is used to determine staff bonuses (a financial impact).
- \* Automated sentiment classification can be biased or produce incorrect results.
- \* Decisions that affect people's financial or legal status should never be made fully automated.

Analysis of the options:

- \* A. Add a human review and approval step # Correct. This ensures accountability and fairness, reducing harm from potential model bias or errors.
- \* B. Include results even with low confidence # Wrong. That increases risk of incorrect decisions.
- \* C. Use all surveys including deleted accounts # Wrong. Violates privacy and compliance.
- \* D. Publish raw survey data # Wrong. Violates privacy and security principles.

Therefore, the best responsible AI-compliant action is to add human review before making financial decisions.

Correct Answer for Q186: A

- \* Microsoft Responsible AI principles
- \* Responsible use of AI in decision-making

## NEW QUESTION # 196

You are building content for a video training solution.

You need to create narration to accompany the video content. The solution must use Custom Neural Voice.

What should you use to create a custom neural voice, and which service should you use to generate the narration? To answer, select the appropriate options in the answer area.

NOTE: Each correct answer is worth one point.

☐

**Answer:**

Explanation:

☐

Explanation

☐

## NEW QUESTION # 197

You are developing an app that will use the text-to-speech capability of the Azure AI Speech service. The app will be used in motor vehicles.

You need to optimize the quality of the synthesized voice output.

Which Speech Synthesis Markup Language (SSML) attribute should you configure?

- A. the style attribute of the mstts: express -as element
- B. the effect attribute of the voice element
- C. the pitch attribute of the prosody element
- D. the level attribute of the emphasis element

**Answer: C**

Explanation:

The scenario:

- \* You are building an in-vehicle application that uses Azure AI Speech for text-to-speech (TTS).
- \* Requirement: Optimize the quality of synthesized voice output.
- \* You must choose the most appropriate SSML (Speech Synthesis Markup Language) attribute.
- \* Used to apply expressive styles like "cheerful," "empathetic," or "angry."
- \* Helpful for emotion/tone, but not specifically about audio quality for clarity in motor vehicles.

- \* Controls how strongly certain words are emphasized.
  - \* Improves meaning and focus, but does not optimize overall voice quality.
  - \* The <prosody> element allows adjustments to pitch, rate, and volume.
  - \* Adjusting pitch directly affects the naturalness and clarity of the synthesized speech.
  - \* Especially useful in noisy environments such as cars, because modifying pitch can make speech stand out better against background noise.
  - \* This directly improves perceived quality of voice output.
  - \* Used for special voice effects (like whispering).
  - \* Not typically used for general clarity or quality improvements.
- The answer: C. the pitch attribute of the prosody element
- \* SSML support in Azure AI Speech
  - \* Prosody element in SSML

### NEW QUESTION # 198

You are developing the smart e-commerce project.

You need to implement autocompletion as part of the Cognitive Search solution.

Which three actions should you perform? Each correct answer presents part of the solution. (Choose three.) NOTE: Each correct selection is worth one point.

- A. Add a suggester for each of the three product name fields.
- B. Set the analyzer property for the three product name variants.
- C. Add a suggester that has the three product name fields as source fields.
- D. Set the searchAnalyzer property for the three product name variants.
- E. Make API queries to the autocomplete endpoint and include suggesterName in the body.
- F. Make API queries to the search endpoint and include the product name fields in the searchFields query parameter.

**Answer: B,C,E**

Explanation:

Scenario: Support autocompletion and autosuggestion based on all product name variants.

A: Call a suggester-enabled query, in the form of a Suggestion request or Autocomplete request, using an API.

API usage is illustrated in the following call to the Autocomplete REST API.

POST /indexes/myxboxgames/docs/autocomplete?search&api-version=2020-06-30

```
{
  "search": "minecraft",
  "suggesterName": "sg"
}
```

B: In Azure Cognitive Search, typeahead or "search-as-you-type" is enabled through a suggester. A suggester provides a list of fields that undergo additional tokenization, generating prefix sequences to support matches on partial terms. For example, a suggester that includes a City field with a value for "Seattle" will have prefix combinations of "sea", "seat", "seatt", and "seattl" to support typeahead.

F: Use the default standard Lucene analyzer ("analyzer": null) or a language analyzer (for example, "analyzer":

"en.Microsoft") on the field.
