Exam XK0-006 Vce, XK0-006 Pdf Torrent

From the experience of our former customers, you can finish practicing all the contents in our XK0-006 training materials within 20 to 30 hours, which is enough for you to pass the XK0-006 exam as well as get the related certification. That is to say, you can pass the XK0-006 Exam as well as getting the related certification only with the minimum of time and efforts under the guidance of our XK0-006 training materials. And the pass rate of our XK0-006 learning guide is as high as more than 98%.

CompTIA Linux+ Certification Exam Sample Questions (Q80-Q85):

NEW QUESTION # 80

A systems administrator is having issues with a third-party API endpoint. The administrator receives the following output:

Which of the following actions should the administrator take to resolve the issue?

- A. Review and fix the DNS client configuration file.
- B. Open a secure port in the server's firewall.
- C. Request a new API endpoint from a third party.
- D. Enable internet connectivity on the host.

Answer: A

Explanation:

The dig comptia.com output shows NXDOMAIN and that the query is being sent to 10.255.255.254, which is not a valid DNS server. This indicates a misconfigured DNS client configuration (e.g., /etc/resolv.conf). Fixing the DNS settings will allow proper hostname resolution.

NEW QUESTION # 81

An administrator completes maintenance on a server but cannot remount the logical volume.

Given the following output:

Which of the following commands should the administrator execute to resolve the issue?

- A. `vgimport data`
- B. `lvchange -ay /dev/data/files`
- C. `lvscan --all`
- D. `vgchange -ay data`

Answer: D

Explanation:

The error message "special device /dev/data/files does not exist" suggests that the volume group data is not activated. From the `lvs` and `vgs` output:

- The logical volume `files` exists within the `data` volume group.
- The volume group (VG) and logical volume (LV) appear correctly listed, but they might be in an inactive state due to maintenance.

NEW QUESTION # 82

A DevOps engineer made some changes to files on a local repository. The engineer realizes that the changes broke the application and the changes need to be reverted back. Which of the following commands is the best way to accomplish this task?

- A. `git stash`
- B. `git rebase`
- C. `git reset`
- D. `git pull`

Answer: C

Explanation:

The `git reset` command reverts changes in the local repository to a previous commit, effectively discarding the problematic modifications and restoring the application to a working state.

NEW QUESTION # 83

Which of the following filesystems contains non-persistent or volatile data?

- A. `/boot`
- B. `/proc`
- C. `/var`
- D. `/usr`

Answer: B

Explanation:

The `/proc` filesystem is a virtual filesystem that provides process and kernel information. It is non-persistent and volatile, meaning its contents exist only in memory and are regenerated at each system boot.

NEW QUESTION # 84

An administrator thinks that the user Joe may be running an unauthorized process on a Linux server. Which of the following commands should the administrator run to confirm this idea?

- A. `ps -ax 'Joe'`
- B. `top -u 'Joe'`
- C. `jobs -n 'Joe'`
- D. `lsuf -p 'Joe'`

Answer: B
