## Latest EMT Dumps Ebook | EMT Test Dumps Free

The memory needs clues, but also the effective information is connected to systematic study, in order to deepen the learner's impression, avoid the quick forgetting. Therefore, we can see that in the actual EMT exam questions, how the arrangement plays a crucial role in the teaching effect. The EMT Study Guide in order to allow the user to form a complete system of knowledge structure, the qualification EMT examination of test interpretation and supporting course practice organic reasonable arrangement together.

## NREMT Emergency Medical Technicians Exam Sample Questions (Q58-Q63):

NEW QUESTION # 58

Following insertion of an oropharyngeal airway in an unresponsive 1-year-old male, he develops cyanosis and bradycardia. You should

- A. Start CPR if his heart rate falls below 100
- **B. Remove the airway and ventilate him**
- C. Increase the ventilation rate to 40-60
- D. Continue ventilation with the airway in place

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In infants, improper insertion of an OPA (oropharyngeal airway) can stimulate the vagus nerve, leading to bradycardia or even complete airway obstruction. If cyanosis and bradycardia develop after OPA insertion, immediate removal and resumption of ventilations with a bag-valve mask is critical.

The OPA must be properly sized and inserted only in patients without a gag reflex. Ventilations alone often reverse vagally induced bradycardia.

#### NEW QUESTION # 59

A 32-year-old female has a history of dysmenorrhea, abdominopelvic pain, and pain when having a bowel movement. She has not been sexually active in 8 months. Her symptoms are most likely caused by

- A. Premature menopause
- **B. Endometrial tissue growing outside the uterus**
- C. An infection that is either bacteria or a virus
- D. Spontaneous abortion

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

These symptoms are classic for endometriosis, where endometrial tissue grows outside the uterus.

Symptoms often include:

- \* Pelvic pain
- \* Painful menstruation (dysmenorrhea)
- \* Painful bowel movements or intercourse

Spontaneous abortion does not apply here due to lack of pregnancy. Premature menopause is rare at this age and presents differently. Infection is less likely in the absence of recent sexual activity or fever.

#### NEW QUESTION # 60

Which of the following techniques are appropriate for examining a patient with an acute abdomen? Select the two correct options.

- **A. Visualize the abdomen before palpation**
- B. Press softly if the abdomen has a pulsating mass
- C. Begin palpation with the most painful quadrant
- D. Palpate the abdomen prior to auscultation
- **E. Lie the patient supine with legs flexed**

**Answer: A,E**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In patients with acute abdominal pain, you must first inspect (visualize) for distension, discoloration, or masses before touching. Palpation always begins away from the most painful area. The patient should be in a supine position with knees flexed to relax the abdominal muscles and ease the exam.

Palpating a pulsating mass could rupture an abdominal aortic aneurysm and is contraindicated.

### NEW QUESTION # 61

Reassessment of a patient begins with repeating the

- A. Primary survey
- B. Scene size-up
- C. Secondary assessment
- D. Vital signs

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The reassessment phase in the EMT patient assessment model starts with repeating the primary survey (also called the primary assessment), which includes:

- \* Airway
- \* Breathing
- \* Circulation
- \* Disability (mental status)
- \* Exposure/environment

The purpose is to identify any changes or deterioration in the patient's life-threatening conditions, especially in dynamic or unstable patients. Only after this do EMTs check vitals and reevaluate secondary complaints.

### NEW QUESTION # 62

When using the SALT method for triage, which of the following interventions should the EMT perform during the individual assessment step?

- A. Bleeding control, opening the airway, and administering two rescue breaths for pediatric patients
- B. Completing first responder scorecards to track patients
- C. Insertion of airway adjuncts, bleeding control, and moving patients to the triage area
- D. Assessing respirations, administering two rescue breaths, and assessing patient mentation

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

SALT (Sort, Assess, Lifesaving interventions, Treatment/Transport) is a mass casualty triage method recommended by the CDC and the National Association of EMS Physicians (NAEMSP). During the

"Assess" step, responders:

- \* Check respirations
- \* Provide lifesaving interventions such as rescue breaths if the patient is not breathing but has a pulse
- \* Evaluate mentation (e.g., ability to follow commands)

Airway adjuncts and full transport do not happen at this stage. Scorecards and pediatric-specific modifications are addressed later in the protocol.
