

NSE6_FMG_AD-7.6 Reliable Braindumps Files - Valid NSE6_FMG_AD-7.6 Study Notes

Our exam dumps are created by our professional IT trainers who are specialized in the Fortinet real dumps for many years and they know the key points of test well. So we can ensure you the accuracy and valid of NSE6_FMG_AD-7.6 dump pdf. Before you buy, you can download the free trial of NSE6_FMG_AD-7.6 Exam Cram. If you have any problems in the course of purchasing or downloading the NSE6_FMG_AD-7.6 certification dumps you can contact us anytime.

Fortinet NSE6_FMG_AD-7.6 Exam Syllabus Topics:

Section	Objectives
Policy and Objects	- Policy management 1. Configure workspace mode 2. Perform policy imports and installations 3. Manage ADOM revisions 4. Perform policy and object management
Administration	- FortiManager features 1. Describe FortiManager features 2. Configure administrative domains (ADOMs) 3. Perform initial configuration
Troubleshooting	- Troubleshooting scenarios 1. Troubleshoot system issues 2. Troubleshoot import and installation issues 3. Troubleshoot device-level and ADOM-level issues 4. Describe FortiManager deployment scenarios
Advanced Configuration	- Advanced deployment 1. Configure the global database ADOM 2. Configure FortiGuard services 3. Describe FortiManager high availability (HA)

- Device management

Device Manager

- 1. Install configuration changes using scripts
- 2. Diagnose issues using revision history
- 3. Register devices in ADOMs

Valid NSE6_FMG_AD-7.6 Study Notes - New NSE6_FMG_AD-7.6 Test Duration

Our company is a multinational company which is famous for the NSE6_FMG_AD-7.6 training materials in the international market. After nearly ten years' efforts, now our company have become the topnotch one in the field, therefore, if you want to pass the NSE6_FMG_AD-7.6 exam as well as getting the related certification at a great ease, I strongly believe that the NSE6_FMG_AD-7.6 Study Materials compiled by our company is your solid choice. To be the best global supplier of electronic NSE6_FMG_AD-7.6 study materials for our customers' satisfaction has always been our common pursuit.

Fortinet NSE 6 - FortiManager 7.6 Administrator Sample Questions (Q45-Q50):

NEW QUESTION # 45

Refer to the exhibit.

Device Interface	Mapping Type	Normalized Interface
port2	Per-Device	LAN
port4	Per-Device	Port4
port6	Per-Device	port6

An administrator added a FortiGate device to FortiManager with the default object settings at the ADOM layer. What can you conclude from the import policy package process of the HQ-NGFW- 1 device?

- A. The administrator must select Per Platform for all interfaces to correctly detect all interfaces from HQ- NGFW-1.
- B. FortiManager will create LAN, port4, and port6 as normalized interfaces at the ADOM layer.
- C. The administrator must manually create the port4 interface on the ADOM layer to avoid import policy errors.
- D. FortiGate may not work as expected when the administrator does not import all objects.

Answer: B

Explanation:

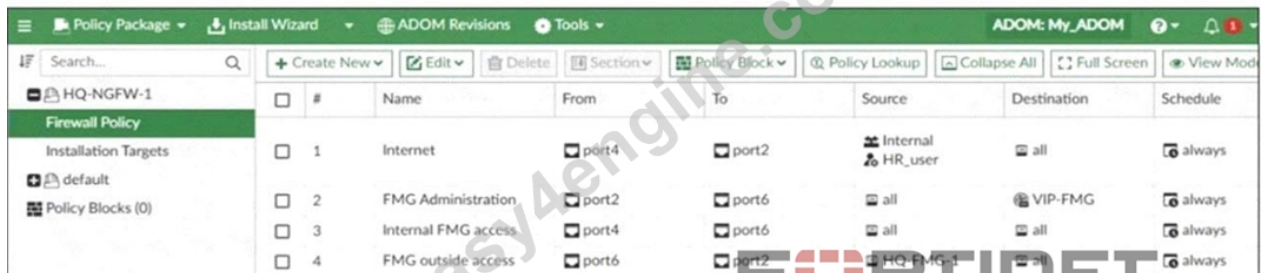

The import process shows that FortiManager will create normalized interfaces named LAN, port4, and port6 at the ADOM layer,

mapping them to the corresponding device interfaces based on the import settings.

NEW QUESTION # 46

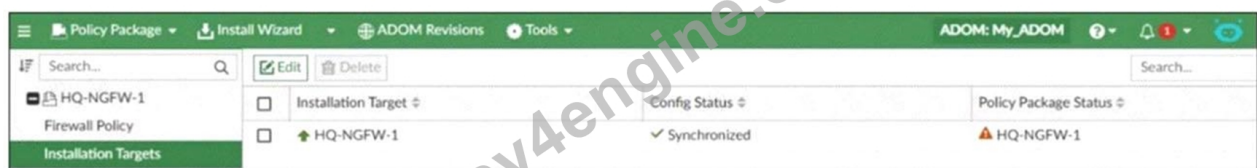

Refer to the exhibits.

Firewall policies

#	Name	From	To	Source	Destination	Schedule
1	Internet	port4	port2	Internal HR_user	all	always
2	FMG Administration	port2	port6	all	VIP-FMG	always
3	Internal FMG access	port4	port6	all	all	always
4	FMG outside access	port6	port2	HQ-FMG-1	all	always

Installation target

Installation Target	Config Status	Policy Package Status
HQ-NGFW-1	✓ Synchronized	⚠ HQ-NGFW-1

BR1-FGT-1 FortiTokens

Type	Serial Number	Status	User
Mobile Token	FTKMOB4A9AC5C56D	Available	*
Mobile Token	FTKMOB4AE1B8B609	Available	*

An administrator needs to push a FortiToken Mobile to assign it to HR_user in the HQ-NGFW-1.

However, when installing the policy package, they receive the following error message:

Copy device global objects

```
Vdom copy failed:  
error -999 -
```

```
Copy objects for vdom root
```

```
"firewall policy", "1", id=5532, COMMIT FAIL - invalid value - prop[user fortitoken]:  
Mobile FortiToken FTKMOB4A9AC5C56D used by user local HR_user could not be found at  
device  
"user local", "FTKMOB4A9AC5C56D", id=5586, COMMIT FAIL - invalid value - prop[user  
fortitoken]: Mobile FortiToken FTKMOB4A9AC5C56D used by user local HR_user could not  
be found at device
```

Why is the administrator not able to install the FortiToken on the HQ-NGFW-1 firewall?

- A. The administrator must use per-device mapping to assign the FortiToken to HQ-NGFW-1.
- **B. The administrator must use a valid FortiToken that exists on HQ-NGFW-1.**
- C. The administrator must use a user local meta field to assign FortiToken.
- D. The administrator must use a metadata variable to assign the same FortiToken to multiple users in FortiManager.

Answer: B

Explanation:

The error occurs because the FortiToken used (FTKMOB4A9AC5C56D) must already exist and be registered on the FortiGate device HQ-NGFW-1. FortiManager cannot push or create new FortiTokens on the device; the token must be valid and present on the FortiGate before it can be assigned to a user.

A service provider administrator has assigned a global policy package to a managed customer ADOM named My_ADOM. The customer administrator has access only to My_ADOM.

- A. The customer administrator can edit the header policy by using workspace mode on the global ADOM.
- B. The customer administrator cannot edit the global header policy; only the service provider administrator can make changes from the global ADOM.
- C. The customer administrator can edit the header policy by using workflow mode on the global ADOM and My_ADOM.
- D. The service provider administrator can unlock the global policy from the global ADOM to authorize changes to the customer administrator.

Customer administrators with access solely to their ADOM (My_ADOM) cannot edit the global header policy; such changes must be made by the service provider administrator in the global ADOM.

FortiManager # diagnose dvm device list
--- There are currently 6 devices/vdoms managed ---
--- There are currently 6 devices/vdoms count for license ---

TYPE          OID      SN              HA      IP          NAME          ADOM      IPS          FIRMWARE      Hw_GenX
fmgfaz-managed 188      FGVM02TN24013504 -      100.65.1.111 BR1-FGT-1     My_ADOM    7.0 MR6 (3401) N/A
| - STATUS: dev-db: not modified; conf: in sync; cond: OK; dm: installed; conn: up; template:[installed]default
| - vdom:[3]root flags:0 adom:My_ADOM pkg:[unknown]BR1-FGT-1
```

- A. The administrator installed only the device-level configuration.
- B. The administrator set the flag to 0 to prevent configuration overrides.
- C. The administrator needs to retrieve the device to correctly detect the FortiGate firmware version.

- D. The administrator reinstalled the policy package.

Answer: A

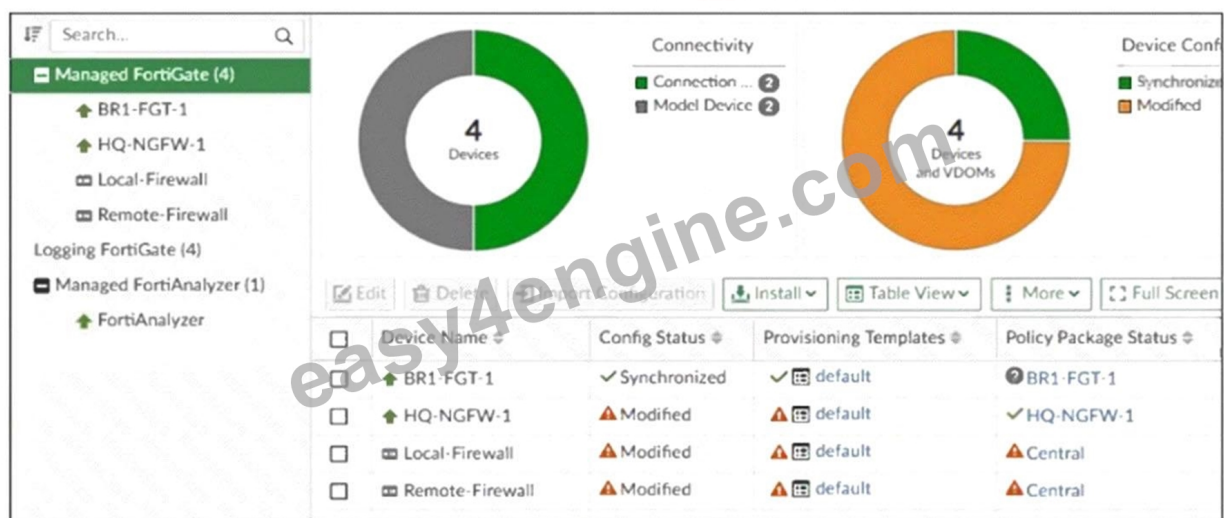

Explanation:

The correct answer is D. The exact extract from the study guide says a revert operation "Reverts only the device database to the previous revision" and "Does not revert policies and objects-you must import them." It further states: "Performing a revert operation followed by an installation only reverts device-level changes and does not revert policy packages." That exactly matches the CLI output. The device shows the device manager portion as installed and synchronized, while the policy package appears as unknown, which indicates the revert and installation affected the device-level configuration only. It did not reinstall or synchronize the policy package. Therefore B is incorrect. A is unsupported by the source, and C is unrelated because the firmware version is already shown in the device list output. The study guide also states that after revert you must use Import Configuration to synchronize policy information.

NEW QUESTION # 49

Refer to the exhibits.

FortiManager device database

Installation Targets Central policy package

BR1-FGT-1	Installation Target	Config Status	Policy Package Status
Central	BR1-FGT-1	✓ Synchronized	BR1-FGT-1
Firewall Policy	Local-Firewall	Unknown	▲ Central
Installation Targets	Remote-Firewall	Unknown	▲ Central
HQ-NGFW-1			
default			

An administrator has been asked to install the same policies from a central policy package onto the BR1-FGT-1 firewall.

The administrator added BR1-FGT-1 as a target in the central policy package installation.

What should the administrator do when reinstalling the central policy package on the BR1-FGT-1 firewall?

- A. Import the policy package to change the unknown status and synchronize the policy package.
- B. Assign only one policy package to the firewall because FortiManager does not allow more than one policy package assigned per device at the same time.
- C. Use the install wizard to install the central policy package on the BR1-FGT-1 firewall.
- D. First resolve the modified status in the configuration and provisioning templates to allow a smooth installation.

Answer: C

Explanation:

Using the Install Wizard is the recommended method to reinstall the central policy package on the BR1-FGT-1 firewall, ensuring all settings, installation targets, and dependencies are correctly processed during installation.

NEW QUESTION # 50

.....

Why we can produce the best NSE6_FMG_AD-7.6 exam prep and can get so much praise in the international market. On the one hand, the software version can simulate the real NSE6_FMG_AD-7.6 examination for you and you can download our study materials on more than one computer with the software version of our study materials. On the other hand, you can finish practicing all the contents in our NSE6_FMG_AD-7.6 practice materials within 20 to 30 hours. So what are you waiting for? Just rush to buy our NSE6_FMG_AD-7.6 exam questions!
