#### NEW QUESTION # 98

An end user's laptop is having network drive connectivity issues in the office. The end user submits a help desk ticket, and a support technician is able to establish a remote connection and fix the issue. The following day, however, the network drive is disconnected again. Which of the following should the technician do next?

- A. Keep the ticket open until next day, then close the ticket.
- B. Escalate the ticket to the next level.
- C. Connect remotely to the user's computer to see whether the network drive is still connected.
- D. Send documentation about how to fix the issue in case it reoccurs.

Escalation is part of the standard support protocol when issues reoccur despite initial troubleshooting.

A: Rechecking remotely may confirm the issue, but doesn't resolve it long term.

B: Providing documentation helps the user but doesn't solve the root cause.

D: Keeping the ticket open is passive and doesn't address the recurring issue.
