Sie können im Internet teilweise die Fragenkatalogen zur SAP C-S4CPB-2508 Zertifizierungsprüfung von EchteFrage kostenlos herunterladen. Dann werden Sie mehr Vertrauen in unsere Produkte haben. Sie können sich dann gut auf Ihre SAP C-S4CPB-2508 Zertifizierungsprüfung vorbereiten. Schicken bitte schnell die Produkte von EchteFrage in den Warenkorb.

SAP C-S4CPB-2508 Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Data Migration and Business Process Testing: This section of the exam measures skills of Business Process Experts and focuses on preparing, migrating, and validating business data within SAP S • 4HANA Cloud. It also includes setting up and executing business process testing to ensure smooth operations after go-live.

Thema 2	• Introduction to Cloud Computing and SAP Cloud ERP Basics: This section of the exam measures skills of Implementation Consultants and covers the fundamental understanding of cloud computing principles along with the basics of SAP S • 4HANA Cloud ERP. It ensures that candidates know the value of cloud solutions, the key concepts of ERP in the cloud, and how SAP's offering supports digital transformation for businesses.
Thema 3	• Configuration and the SAP Fiori Launchpad: This section of the exam measures the skills of Implementation Consultants and covers the ability to configure the system to meet customer requirements. It also evaluates knowledge of using the SAP Fiori Launchpad to personalize user experiences and manage business roles within the cloud environment.

SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition C-S4CPB-2508 Prüfungsfragen mit Lösungen (Q10-Q15):

10. Frage

After integration requirements have been finalized, what is used to analyze, design, and document the integration strategy?

- A. Integration and API List
- **B. Integration Solution Advisory Methodology**
- C. SAP Cloud ALM Requirements app
- D. SAP Business Accelerator Hub

Antwort: B

11. Frage

After integration requirements have been finalized, what is used to analyze, design, and document the integration strategy?

- A. Integration and API List
- **B. Integration Solution Advisory Methodology**
- C. SAP Cloud ALM Requirements app
- D. SAP Business Accelerator Hub

Antwort: B

Begründung:

The Integration Solution Advisory Methodology (ISA-M) is a framework that helps customers and partners to define their integration strategy, design the integration architecture, and document the integration solution.

ISA-M covers the entire integration lifecycle, from planning and scoping to testing and deployment. ISA-M is based on best practices and recommendations from SAP and industry experts. ISA-M supports different integration scenarios, such as cloud-to-cloud, cloud-to-on-premise, and hybrid integration. ISA-M also provides tools and templates to facilitate the integration process, such as the Integration Assessment Questionnaire, the Integration Architecture Document, and the Integration Test Plan. /4HANA Cloud, Public Edition - All Learning Journeys > Implementing SAP S/4HANA Cloud Public Edition > Unit 2: Integration Strategy and Architecture > Topic 2.1: Introduction to Integration Solution Advisory Methodology (ISA-M)

12. Frage

Where do you enable a customer-specific field to be available for UIs and reports relevant for the same business context?

- A. In the Runtime Authoring mode
- B. In the Extensibility Cockpit app
- C. In the Maintain SAP Business Technology Platform Extensions app
- **D. In the Custom Fields app**

Antwort: D

13. Frage

In which deployment models is application management the responsibility of the customer? Note: There are 3 correct answers to this question.

- A. Infrastructure as a Service
- **B. On premise**
- **C. Platform as a Service**
- **D. Private Cloud**
- E. Software as a Service

Antwort: B,C,D

Begründung:

In different deployment models, the responsibility for application management varies, with the customer typically taking on more responsibility in certain models:

* Platform as a Service (PaaS): In this model, the customer is responsible for managing the applications they develop or deploy on the platform, even though the provider manages the underlying infrastructure, operating systems, and middleware.

* On premise: In an on-premise deployment, the customer has full responsibility for managing both the applications and the infrastructure they run on. This includes maintenance, updates, security, and compliance for both the applications and the hardware/software infrastructure.

* Private Cloud: Similar to on-premise deployments, customers in a private cloud model are typically responsible for managing their applications, including SAP S/4HANA Cloud Public Edition. The cloud provider may manage the cloud infrastructure and virtualization layer, but the customer often handles application-level management tasks, including updates, customization, and user management.

These deployment models contrast with Software as a Service (SaaS), where the service provider is generally responsible for managing the application, including its maintenance, updates, and availability.

14. Frage

Where do you enable a customer-specific field to be available for UIs and reports relevant for the same business context?

- A. In the Runtime Authoring mode
- B. In the Extensibility Cockpit app
- C. In the Maintain SAP Business Technology Platform Extensions app
- **D. In the Custom Fields app**

Antwort: D

Begründung:

You enable a customer-specific field to be available for UIs and reports relevant for the same business context in the Custom Fields app. The Custom Fields app allows you to create and manage custom fields for business objects in SAP S/4HANA Cloud, public edition. You can define the properties of the custom fields, such as the label, data type, length, and default value. You can also specify the UIs and reports where you want the custom fields to appear, and the business context that determines the visibility and authorization of the custom fields. The Custom Fields app also enables you to activate the custom fields and generate the corresponding CDS views and OData services for consumption by other applications.
