最新D-UN-DY-23考證 & D-UN-DY-23考試備考經驗

VCESoft是個為EMC D-UN-DY-23 認證考試提供短期的有效培訓的網站，但是VCESoft能保證你的EMC D-UN-DY-23 認證考試及格。如果你不及格，我們會全額退款。在你選擇購買VCESoft的產品之前，你可以在VCESoft的網站上免費下載我們提供的部分關於EMC D-UN-DY-23認證考試的練習題及答案作為嘗試，那樣你會更有信心選擇VCESoft的產品來準備你的EMC D-UN-DY-23 認證考試。

最新的 Proven Professional D-UN-DY-23 免費考試真題 (Q238-Q243):

問題 #238

A storage administrator wants to create a series of daily snapshots for an existing critical LUN.
How can the snapshots be created?

- A. only manually taken snapshots are supported on existing LUNs
- B. From the Pool Properties page configure the Snapshot schedule
- C. Snapshot schedules can only be configured within the LUN Creation wizard
- D. From the LUN Properties page, configure the Snapshot schedule

答案：D

問題 #239

Which storage objects support Advanced Deduplication?

- A. VMFS datastores and vVols
- B. Vols and Thick LUNs
- C. Thin LUNs and thin VMFS datastores
- D. Thin LUNs and thick LUNs

答案： C

問題 #240

Which Unity feature benefits oracle OLTP environments by improving storage utilization?

- A. Automatic Storage tiering
- B. 4 block formatting
- C. VVOLS
- D. increased SP Cache size

答案： A

問題 #241

What types of file retention are available with the Dell EMC Unity XT family arrays?

- A. Enterprise and Compliance
- B. Community and Professional editions
- C. Professional and Enterprise editions
- D. Integrated and Centralized

答案： A

問題 #242

What is a characteristic of FAST VP?

- A. Users can set the Fast VP data relocation rate.
- B. Fast VP data relocation runs in the background at all times once it is enabled.
- C. Users can enable or disable FAST VP at the LUN level.
- D. Fast VP optimizes data replacement by moving 1 GB slices between disk tiers.

答案： A

解題說明：

FAST VP (Fully Automated Storage Tiering for Virtual Pools) is a feature that automatically moves data within a storage pool based on the performance requirements and access patterns of the data. FAST VP data relocation runs in the background according to a user-defined schedule and rate. The schedule determines when the data relocation starts and ends, and the rate determines how much system resources are used for the data relocation. Users can set the Fast VP data relocation rate to High, Medium, Low, or None. High means that the data relocation has the highest priority and uses the most system resources, while None means that the data relocation is disabled. Fast VP data relocation does not run at all times, but only during the scheduled window. Fast VP optimizes data placement by moving 256 MB slices between disk tiers, not 1 GB slices. Users cannot enable or disable FAST VP at the LUN level, but only at the storage pool level.
