Study guides are essentially a detailed LEED-Green-Associate tutorial and are great introductions to new LEED-Green-Associate training courses as you advance. The content is always relevant, and compound again to make you pass your LEED-Green-Associate Exams on the first attempt. You will frequently find these LEED-Green-Associate PDF files downloadable and can then archive or print them for extra reading or studying on-the-go.

USGBC LEED Green Associate Exam Sample Questions (Q222-Q227):

NEW QUESTION # 222

Which of the following is a benefit of a building owner choosing to install a solar photovoltaic?

- A. Decreased upfront building cost
- B. Lower liabilities
- **C. Reduced greenhouse gas emissions**
- D. Heat Island Reduction

Answer: C

Explanation:

Installing a solar photovoltaic system can significantly reduce greenhouse gas emissions from a building.

Solar panels generate electricity from sunlight, a renewable resource, instead of burning fossil fuels that release carbon dioxide and other greenhouse gases. While solar panels do require an upfront investment, they can also result in lower energy bills over time.

NEW QUESTION # 223

What is pre-consumer recycled content?

- **A. Waste material that is diverted from the waste stream during the manufacturing process**
- B. Waste material that is generated from factories
- C. Virgin material that is not utilized in production
- D. Waste material that is generated by households or by commercial use

Answer: A

Explanation:

Pre-consumer recycled content refers to waste material that is diverted from the waste stream during the manufacturing process. This can include scraps or trimmings that are collected and returned to the manufacturing process. It does not include rework, regrind, or scrap materials capable of being reclaimed within the same process that generated them. References: LEED Green Associate Candidate Handbook, U.S.

NEW QUESTION # 224

A retail store is pursuing LEED for Interior Design and Construction certification. Which of the following strategies should be conducted first?

- A. Create an energy budget analysis
- B. Perform a life-cycle analysis
- C. Perform an energy model according to ASHRAE 90.1
- D. **Conduct a charrette with the project team**

Answer: D

NEW QUESTION # 225

Which of the following credit categories is affected by increasing the amount of ventilation in an occupied space?

- A. Indoor Ventilation and Energy
- B. **Indoor Environmental Quality**
- C. Materials and Resources
- D. Water Efficiency

Answer: B

Explanation:

Explanation

Increasing the amount of ventilation in an occupied space affects the Indoor Environmental Quality credit category. Ventilation is the process of supplying fresh outdoor air and removing stale indoor air from a building. Ventilation can improve the indoor environmental quality by diluting or removing indoor pollutants, such as carbon dioxide, volatile organic compounds, or particulate matter, and enhancing the thermal comfort and well-being of the occupants. The LEED Green Associate Candidate Handbook states that one of the strategies for achieving indoor environmental quality is to "increase ventilation rates" [1, p. 16]. NEW QUESTION # 226

Sustainable forestry is the practice of maintaining forest resources to meet the long-term forest product needs of humans while maintaining the

- A. quality Of salvaged wood products
- B. **biodiversity of the forest and landscape**
- C. cost of the forest products
- D. harvesting of the rapidly grown forest

Answer: B

Explanation:

Sustainable forestry is the practice of managing forest resources in a way that meets the current and future needs of humans for forest products, while also conserving and enhancing the ecological, social, and economic values of the forest and its surrounding landscape¹. One of the key aspects of sustainable forestry is to maintain the biodiversity of the forest, which refers to the variety and abundance of living organisms, such as plants, animals, fungi, and microorganisms, and their interactions within the forest ecosystem². Biodiversity is important for the health and resilience of the forest, as it provides essential ecosystem services, such as carbon sequestration, water purification, soil formation, nutrient cycling, pollination, pest control, and climate regulation²³. Biodiversity also supports the livelihoods, cultures, and well-being of forest-dependent communities and indigenous peoples²³.

What is sustainable forestry?

Why is biodiversity important for forests?
