Cisco Understanding Cisco Cybersecurity Operations Fundamentals Sample Questions (Q14-Q19):

NEW QUESTION # 14

Endpoint logs indicate that a machine has obtained an unusual gateway address and unusual DNS servers via DHCP. Which type of attack is occurring?

- A. command injection
- B. evasion methods
- C. man in the middle attack
- D. phishing

Answer: C

Explanation:

The situation where endpoint logs show a machine receiving an unusual gateway address and DNS servers via DHCP is indicative of a Man-in-the-Middle (MitM) attack, specifically a DHCP spoofing attack. In this type of attack, an adversary can set up a rogue DHCP server or manipulate the DHCP communication to provide false gateway and DNS information to clients. This allows the attacker to intercept, monitor, or manipulate traffic between the client and the intended gateway or DNS servers².

A network administrator is investigating suspicious network activity by analyzing captured traffic. An engineer notices abnormal behavior and discovers that the default user agent is present in the headers of requests and data being transmitted. What is occurring?

- A. indicators of data exfiltration HTTP requests must be plain text
- **B. cache bypassing attack: attacker is sending requests for noncacheable content**
- C. garbage flood attack attacker is sending garbage binary data to open ports
- D. indicators of denial-of-service attack due to the frequency of requests

Answer: B

NEW QUESTION # 17

Which metric in CVSS indicates an attack that takes a destination bank account number and replaces it with a different bank account number?

- A. confidentiality
- B. scope
- **C. integrity**
- D. availability

Answer: C

Explanation:

Integrity is a metric in CVSS that measures the impact of a vulnerability on the trustworthiness and veracity of the data or information in a system. A vulnerability that affects the integrity of a system can allow an attacker to modify, delete, or corrupt the data or information without authorization. An example of such a vulnerability is a bank account number tampering attack, where an attacker changes the destination bank account number of a transaction to redirect the funds to their own account. NEW QUESTION # 18

Which type of data must an engineer capture to analyze payload and header information?

- A. alert data
- **B. full packet**
- C. frame check sequence
- D. session logs

Answer: B

Explanation:

To analyze both payload and header information, an engineer must capture the full packet data. This includes all protocol and payload information for the traffic, allowing for a comprehensive analysis of the data being transmitted. Reference: Full packet capture is a common practice in network monitoring and security, as it provides detailed insights into the data transmitted over the network, including both payload and header information
