Free PDF Quiz 2026 Valid SAP Valid Test C-BCBDC-2505 Tips

What is more, we have free demos are freebies for your information. In case you are tentative about their quality, we give these demos form which you could get the brief outline and questions closely related with the C-BCBDC-2505 practice materials. Only by practising them on a regular base, you will see clear progress happened on you. Besides, rather than waiting for the gain of our C-BCBDC-2505 practice materials, you can download them immediately after paying for it, so just begin your journey toward

success now.

SAP Certified Associate - SAP Business Data Cloud Sample Questions (Q56-Q61):

NEW QUESTION # 56

In SAP Analytics Cloud, you have a story based on an import model. The transactional data in the model's data source changes. How can you update the data in the model?

- A. Allow model import
- B. Schedule the import
- C. Refresh the story
- D. Refresh the data source

Answer: B

Explanation:

When an SAP Analytics Cloud (SAC) story is based on an import model, the data is physically copied and stored within SAC. Therefore, simply refreshing the story (option A) will only update the visualization with the data already in the model and will not pull new data from the source. Similarly, "Allow model import" (option B) isn't a direct action for updating data, but rather a prerequisite for the import process itself. "Refresh the data source" (option C) is not an action performed within SAC for an import model. To update the data in the model when the transactional data in its source changes, you must schedule the import (option D) or manually re-run the import process. This process re-fetches the latest data from the original source system and updates the SAC import model, ensuring your story reflects the most current information. This scheduling can be set up to occur at regular intervals, keeping the model synchronized with the source data.

NEW QUESTION # 57

What are the three primary access levels you can assign when sharing files?

There are 3 correct answers to this question.

Response:

- A. Full Control
- B. Read Only
- C. Edit
- D. Read/Write
- E. View

Answer: A,C,E

NEW QUESTION # 58

Which component of SAP Business Data Cloud allows for the creation of data models?

Please choose the correct answer.

Response:

- A. Data Marketplace
- B. Data Monitor
- C. Data Builder
- D. Data Catalog

Answer: C

NEW QUESTION # 59

What is a key function of the Business Catalog in SAP Business Data Cloud?

Please choose the correct answer.

Response:

- A. To register, document, and reuse business entities and models

- B. To import legacy data from non-SAP systems
- C. To perform real-time analytics directly on operational systems
- D. To store backups of all business data models

Answer: A

NEW QUESTION # 60

What are some use cases for an SAP Datasphere task chain? Note: There are 3 correct answers to this question.

- **A. Execute a Replication Flow and Transformation Flow in sequence**
- B. Upload a CSV file into a local table
- **C. Run an Open SQL Schema Procedure**
- D. Execute a data action for a planning function
- **E. Create or Refresh View Persistency**

Answer: A,C,E

Explanation:

SAP Datasphere task chains are powerful tools for orchestrating and automating sequences of operations, making them ideal for managing complex data pipelines and recurring processes. One key use case is to Create or Refresh View Persistency (A). If you have views for which you want to persist the data (materialize them into tables) for performance or specific analytical needs, a task chain can automate the scheduled recreation or refresh of these persistent views. Another common use case is to Execute a Replication Flow and Transformation Flow in sequence (C). This allows you to define a process where data is first replicated from a source system into Datasphere, and then immediately followed by transformation steps to cleanse, enrich, or aggregate that data, ensuring a fully automated end-to-end data preparation. Furthermore, task chains can be used to Run an Open SQL Schema Procedure (D). This provides flexibility to integrate custom SQL logic or stored procedures into an automated workflow, enabling advanced data manipulation or administrative tasks. Uploading a CSV file (B) is typically a manual import action, and executing a data action for a planning function (E) relates to planning models, not general Datasphere task chains.

NEW QUESTION # 61

.....

As old saying goes, no pains, no gains. You must depend on yourself to acquire what you want. No one can substitute you with the process. Of course, life has shortcut, which can ensure you have a bright future. Our C-BCBDC-2505 training quiz will become your new hope. As the most popular exam provider in the market, we are warmly praised and we can receive thousands of the grateful feedbacks from our worthy customers on C-BCBDC-2505 Exam Questions. please trust and buy our C-BCBDC-2505 study materials!
