100% Valid ISTQB CT-UT PDF Dumps and CT-UT Exam Questions

The price for CT-UT learning materials is quite reasonable, no matter you are a student or you are an employee in the company, and you can afford the expense. Besides, CT-UT exam braindumps of us is famous for the high-quality and accuracy. You can pass the exam just one time if you choose us. CT-UT Learning Materials contain both questions and answers, and you can know the answers right now after you finish practicing. We offer you free update for one year and the update version for CT-UT exam dumps will be sent to your email automatically.

ISTQB Certified Tester Usability Tester Sample Questions (Q10-Q15):

NEW QUESTION # 10
During a usability test, a user suggested that a quick search box on every page would help a lot for several of the main tasks. You added this finding to the list.
What's the correct classification for these kinds of findings?

- A. Usability problem
- B. Good idea
- C. Functional problem
- D. Positive finding

Answer: B

Explanation:
In usability evaluations, a distinction is made between actual usability problems (where a user struggles to complete a task or is confused by the interface) and suggestions or ideas that users provide based on their preferences or perceived improvements. When a participant offers a new feature idea (such as a quick search box), this is classified as a "good idea" or "feature suggestion," not necessarily a usability problem. It may inform future design enhancements but does not indicate a failure in usability for existing

functionality.

ISO 25062:2006 - Usability Test Reports
###

NEW QUESTION # 11

Usability reviews aim to identify potential usability problems based on certain criteria. Which of the following is a reasonable criterion for a usability review?

* A. Functional requirements
* B. Usability standards
* C. Opinion of the management
* D. Statutory Code of Practice

Answer: B

Explanation:
Usability reviews evaluate a system or interface against established usability principles or standards to identify potential issues before user testing. A recognized criterion for such reviews includes adherence to usability standards such as ISO 9241 or the Web Content Accessibility Guidelines (WCAG). These standards are derived from years of research and user-centered design principles. Options A and C do not directly relate to usability. Functional requirements (option B) refer to what the system should do, not how usable it is.
Hence, option D is correct as usability standards provide a consistent, objective basis for evaluating usability.

###

NEW QUESTION # 12

What is a usability test task?

* A. A usability test execution activity specified by the moderator that needs to be accomplished by a usability test participant within a given period of time
* B. A document specifying a sequence of actions for the execution of a usability test. It is used by the moderator to keep track of briefing and pre-session interview questions, usability test tasks, and post- session interview questions
* C. A process through which information about the usability of a system is gathered in order to improve the system (known as formative evaluation) or to assess the merit or worth of a system (known as summative evaluation)
* D. A test session in usability testing in which a usability test participant is executing tests, moderated by a moderator and observed by a number of observers

Answer: A

Explanation:
A usability test task is a clearly defined activity that a participant is asked to perform during a usability test session. These tasks are typically created by the test designer or moderator and are designed to reflect realistic user goals (e.g., "Find and buy a product"). The purpose is to observe the participant's interaction with the system and identify usability issues. Option A describes a usability test script, not a task. Option C defines usability evaluation in general, and D refers to a session, not a specific task. Therefore, B is correct.
References:
* ISO 25062:2006 - Common Industry Format (CIF) for Usability Test Reports
* Nielsen Norman Group: Writing Effective Usability Tasks
* Usability.gov: Usability Test Task Design
###

NEW QUESTION # 13

In the last project, the usability tests substantially exceeded the budget of the test plan. Which quality control task could have been used to avoid this?

- A. Check that the usability test plan has been properly reviewed
- B. Check whether the usability test report conforms to the best practices
- C. Check consumed resources regularly and compare with the estimates
- D. Check that findings are communicated to the stakeholders

Answer: C

Explanation:
To prevent usability testing from exceeding budget, active monitoring and control of project resources are critical. The best practice is to regularly check consumed time, costs, and effort against the original estimates, allowing timely adjustments to scope or resources. This is a classic quality control practice aligned with ISO
9001 principles and standard project management methodologies. Option A relates to test preparation, option C concerns reporting and communication, and option D applies after test execution. Only option B deals directly with budget control during the test.

* ISO 9001:2015 - Quality Management Systems
* ISTQB: Usability Testing Guidelines
* Nielsen Norman Group: Budgeting for Usability Testing
###

NEW QUESTION # 14

What location is NOT suitable for conducting a usability test?

- A. A room at the place where the test participant lives or works.
- B. Two office rooms that are connected by a video link.
- C. A public place, such as a cafe.
- D. A room where no action of the user can be seen or recorded by any means.

Answer: D

Explanation:
The primary goal of usability testing is to observe and record user behavior while interacting with the system.
A location where user actions cannot be seen or recorded (option A) completely undermines the test's purpose and is therefore not suitable.
While options B, C, and D are not ideal in all cases, they can still be valid settings depending on the context.
Testing in a user's natural environment (B) increases ecological validity. Remote testing via video link (C) is widely accepted. Testing in a public setting (D) can be useful for mobile apps or services intended for real- world use.
