Besides, there is no difficult sophistication about the procedures, our latest SPLK-2003 Exam Torrent materials have been in preference to other practice materials and can be obtained immediately.

## Splunk Phantom Certified Admin Sample Questions (Q121-Q126):

### NEW QUESTION # 121

Phantom supports multiple user authentication methods such as LDAP and SAML2. What other user authentication method is supported?

- A. OpenID
- **B. PIV/CAC**
- C. SAML3
- D. Biometrics

**Answer: B**

Explanation:

Splunk SOAR supports multiple user authentication methods to ensure secure access to the platform. Apart from LDAP (Lightweight Directory Access Protocol) and SAML2 (Security Assertion Markup Language 2.0), SOAR also supports PIV (Personal Identity Verification) and CAC (Common Access Card) as authentication methods. These are particularly used in government and military organizations for secure and authenticated access to systems, providing a high level of security through physical tokens or cards that contain encrypted user credentials.

### NEW QUESTION # 122

When the Splunk App for SOAR Export executes a Splunk search, which activities are completed?

- A. CIM fields are mapped to CEF fields and a container is created on the SOAR server.
- B. CIM fields are mapped to CEF and a container is created on the Splunk server.
- C. CEF fields are mapped to CIM fields and a container is created on the SOAR server.
- D. CEF fields are mapped to CIM and a container is created on the Splunk server.

**Answer: A**

Explanation:

When the Splunk App for SOAR Export executes a Splunk search, it typically involves mapping Common Information Model (CIM) fields from Splunk to the Common Event Format (CEF) used by SOAR, after which a container is created on the SOAR server to house the related artifacts and information. This process allows for the integration of data between Splunk, which uses CIM for data normalization, and Splunk SOAR, which uses CEF as its data format for incidents and events.

Splunk App for SOAR Export is responsible for sending data from your Splunk Enterprise or Splunk Cloud instances to Splunk SOAR. The Splunk App for SOAR Export acts as a translation service between the Splunk platform and Splunk SOAR by performing the following tasks:

- Mapping fields from Splunk platform alerts, such as saved searches and data models, to CEF fields.
- Translating CIM fields from Splunk Enterprise Security (ES) notable events to CEF fields.
- Forwarding events in CEF format to Splunk SOAR, which are stored as artifacts.

### NEW QUESTION # 123

Playbooks typically handle which types of data?

- A. Container data, Artifact CEF data, Result data, List data
- B. Container CEF data, Artifact data, Result data, List data
- C. Container data, Artifact data, Result data, Threat data
- D. Container data, Artifact CEF data, Result data, Threat data

**Answer: A**

### NEW QUESTION # 124

Which of the following roles is appropriate for a Splunk SOAR account that will only be used to execute automated tasks?

- A. Service Account
- B. Automation
- C. Automation Engineer
- D. Non-Human

**Answer: B**

### NEW QUESTION # 125

Where in SOAR can a user view the JSON data for a container?

- A. In the data ingestion display.
- B. On the Investigation page.
- C. In the analyst queue.
- D. In the audit log.

**Answer: B**

Explanation:

In Splunk SOAR, the Investigation page is where users can delve into the details of containers, artifacts, and actions. It provides a comprehensive view of the incident or event under investigation, including the JSON data associated with containers. This JSON data represents the structured information about the container, including its attributes, artifacts, and actions taken within the

playbook.

A container is the top-level data structure that SOAR playbook APIs operate on. Every container is a structured JSON object which can nest more arbitrary JSON objects, that represent artifacts.

A container is the top-level object against which automation is run. To view the JSON data for a container, you need to navigate to the Investigation page, which shows the details of a container, such as its name, label, owner, status, severity, and artifacts. On the Investigation page, you can click on the JSON tab, which displays the JSON representation of the container and its artifacts.

## NEW QUESTION # 126

.....

Many students did not perform well before they use Splunk Phantom Certified Admin actual test. They did not like to study, and they disliked the feeling of being watched by the teacher. They even felt a headache when they read a book. There are also some students who studied hard, but their performance was always poor.
