

Reliable EMEA-Advanced-Support Test Question & Accurate EMEA-Advanced-Support Answers

P.S. Free & New EMEA-Advanced-Support dumps are available on Google Drive shared by ValidBraindumps:
https://drive.google.com/open?id=1YA8hTKMo2rshxEWBb-r6_IDu15NZpx4A

With our EMEA-Advanced-Support practice test software, you can simply assess yourself by going through the EMEA-Advanced-Support practice tests. We highly recommend going through the EMEA-Advanced-Support answers multiple times so you can assess your preparation for the Fortinet EMEA Advanced Support Exam. Make sure that you are preparing yourself for the EMEA-Advanced-Support test with our practice test software as it will help you get a clear idea of the real EMEA-Advanced-Support exam scenario. By passing the exams multiple times on practice test software, you will be able to pass the real EMEA-Advanced-Support test in the first attempt.

The EMEA-Advanced-Support exam practice test questions are designed and verified by experienced and qualified Fortinet EMEA-Advanced-Support exam trainers. They check and verify all Fortinet EMEA-Advanced-Support exam dumps one by one and offer the best possible answers to a particular Fortinet EMEA-Advanced-Support Exam Questions. So you will find each Fortinet EMEA-Advanced-Support exam questions and their respective answers correct and error-free and assist to complete the EMEA-Advanced-Support exam preparation quickly.

Fortinet Reliable EMEA-Advanced-Support Test Question: Fortinet EMEA Advanced Support Exam - ValidBraindumps Help you Pass Once

The experts in our company have been focusing on the EMEA-Advanced-Support examination for a long time and they never overlook any new knowledge. The content of our study materials has always been kept up to date. Don't worry if any new information comes out after your purchase of our EMEA-Advanced-Support study guide. We will inform you by E-mail when we have a new version. With our great efforts, our study materials have been narrowed down and targeted to the EMEA-Advanced-Support examination. So you don't need to worry about wasting your time on useless EMEA-Advanced-Support exam materials information.

Fortinet EMEA Advanced Support Exam Sample Questions (Q30-Q35):

NEW QUESTION # 30

What is the purpose of FortiGate's 'FortiGuard' service in security profiles?

- A. Manages HA cluster synchronization
- B. Enables local storage of security logs
- C. Configures VPN tunnel encryption
- **D. Provides real-time threat intelligence updates**

Answer: D

Explanation:

FortiGuard services provide real-time threat intelligence updates to FortiGate for signatures, URL databases, and anti-malware, enhancing security profiles like IPS and web filtering. It does not handle log storage (B), VPN encryption (C), or HA synchronization (D). Exact extract: "FortiGuard services deliver real-time threat intelligence, updating FortiGate with the latest signatures, URL databases, and anti-malware definitions for security profiles."

NEW QUESTION # 31

Which of these BGP paths will be the preferred one ?

- **A. Prefer the path with the highest Local Preference value**
- B. Prefer the path with the shortest AS Path
- C. Prefer External path (learned via EBGP) over Internal path (IBGP)
- D. Prefer the path with the lowest Multi-Exit Discriminator (MED)

Answer: A

Explanation:

BGP path selection follows a specific order of attributes to determine the best path. The process prefers the path with the highest local preference first, as it is one of the earliest steps in the decision process. Local preference is used within an AS to influence outbound traffic. Only if local preferences are equal does it move to the next criteria, such as shortest AS path. The AS path length is considered after local preference, MED after that, and eBGP over iBGP even later. Therefore, among the options, the highest local preference (D) is the most preferred criterion. The original document's answer B is incorrect based on standard BGP selection rules implemented in Fortinet. Exact extract: This article describes the BGP route selection process. Scope FortiGate. Solution Consider only routes with no AS loops and a valid next hop. BGP makes routing decisions based on path, network policies and rulesets ... select the route with the lowest router ID as the best path. Network. Type. To achieve this, multiple route selection techniques can be used. Some are protocol- agnostic (for example, weight) and others are protocol-specific (for example ...).

NEW QUESTION # 32

Which statement is true about IPsec VPNs and SSL VPNs?

- **A. All of the above**
- B. SSL VPN creates a HTTPS connection. IPsec does not
- C. Either a SSL VPN or an IPsec VPN can be established between an end-user workstation and a FortiGate device
- D. Both SSL VPNs and IPsec VPNs are standard protocols

Answer: A

Explanation:

Both SSL VPN and IPsec VPN are standard protocols supported by FortiGate devices for secure remote access. SSL VPN typically uses HTTPS (TCP port 443) for encrypted communication, while IPsec uses protocols like IKE and ESP. Both can be configured between an end-user workstation (e.g., via FortiClient) and a FortiGate device, supporting various authentication methods. All options are correct, making D the correct answer. Exact extract: "SSL VPN technology uses the standard SSL/TLS protocol to provide a secure connection to the FortiGate unit. The FortiGate SSL VPN can be configured to use HTTPS..." and "IPsec VPNs use standardized protocols like IKE and ESP to create secure tunnels... FortiClient supports both IPsec and SSL VPN connections to FortiGate devices for remote access."

NEW QUESTION # 33

Client is connected to firewall via link with MTU 1500 bytes, server is connected to firewall via link with MTU 1496 bytes. The firewall is rewriting both sender and receiver tcp-mss to 1450 bytes. What maximum size of IP packets are we going to see when client connects to server?

- A. 1496 bytes
- B. 1500 bytes
- C. 1450 bits
- **D. 1450 bytes**
- E. 1500 bits
- F. 1496 bits

Answer: D

Explanation:

The TCP MSS (Maximum Segment Size) defines the maximum TCP payload size, excluding headers. When the firewall sets MSS to 1450 bytes, the TCP segment size is limited to this value. For IP packets, the total size includes the TCP header (20 bytes) and IP header (20 bytes), so $1450 \text{ (MSS)} + 20 \text{ (TCP)} + 20 \text{ (IP)} = 1490$ bytes, which fits within both link MTUs (1500 and 1496 bytes). Thus, the maximum IP packet size is not limited by the link MTUs but by the MSS, adjusted for headers. Options C and F (bits) are incorrect units; A and B exceed the MSS limit. Exact extract: "The TCP MSS is adjusted to prevent fragmentation... FortiGate can rewrite the MSS in TCP SYN packets to ensure the total IP packet size (including IP and TCP headers) does not exceed the configured value."

NEW QUESTION # 34

Link aggregation allows network devices to _____

- A. None of the above
- B. Restrict the bandwidth
- C. Increase bandwidth of an interface
- **D. Increase bandwidth by binding physical interfaces into a single channel**

Answer: D

Explanation:

Link aggregation, also known as IEEE 802.3ad or 802.1ax, enables the binding of multiple physical interfaces to form a single logical interface, which increases the overall bandwidth and provides redundancy. This is achieved by combining the bandwidth of the individual links into one aggregated link. For example, if two

1Gbps interfaces are aggregated, the logical link can provide up to 2Gbps bandwidth. This configuration is commonly used in FortiGate devices to enhance network performance without replacing hardware. The option B correctly describes this by stating "Increase bandwidth by binding physical interfaces into a single channel," which aligns with the official description. Incorrect options include A, which is vague and does not specify the method of binding multiple interfaces; C, which is the opposite of the purpose; and D, which is invalid.

Exact extract: Link aggregation (IEEE 802.3ad/802.1ax) enables you to bind two or more physical interfaces together to form an aggregated (combined) link. This new link ... Link aggregation combines multiple physical interfaces into a single logical interface, increasing bandwidth and link redundancy. Traffic is distributed evenly.

NEW QUESTION # 35

.....

You can directly refer our Fortinet EMEA-Advanced-Support study materials to prepare the exam. Once the newest test syllabus is issued by the official, our experts will quickly make a detailed summary about all knowledge points of the real Fortinet EMEA-Advanced-Support Exam in the shortest time. All in all, our EMEA-Advanced-Support exam quiz will help you grasp all knowledge points.

Accurate EMEA-Advanced-Support Answers: <https://www.validbraindumps.com/EMEA-Advanced-Support-exam-prep.html>

As our EMEA-Advanced-Support study materials are surely valid and high-efficiency, you should select us if you really want to pass exam one-shot, We are confident that all users can pass exams if you can pay attention to our EMEA-Advanced-Support exam questions and answers, Any time if you want to know something about our products EMEA-Advanced-Support: Fortinet EMEA Advanced Support Exam exam cram, we will serve for you immediately, Fortinet Reliable EMEA-Advanced-Support Test Question Many candidates may feel difficult when they take part in their exams first time, if you have our products, you will attend exam and pass exam casually.

In most cases they do not believe that the holder of the certificate Exam EMEA-Advanced-Support Quiz is the same one that did the course and therefore they tend to be more resistant when it comes to offering them a job.

for several years, Microsoft Word and Excel EMEA-Advanced-Support were the only two applications that took full advantage of the Windows interface, As our EMEA-Advanced-Support study materials are surely valid and high-efficiency, you should select us if you really want to pass exam one-shot.

Realistic Reliable EMEA-Advanced-Support Test Question, Ensure to pass
