InsuranceSuite-Analyst VCE Torrent & InsuranceSuite-Analyst Exam Dumps & InsuranceSuite-Analyst Study Materials

The passing rate of our InsuranceSuite-Analyst training braindump is 99% which means that you almost can pass the InsuranceSuite-Analyst test with no doubts. The reasons why our InsuranceSuite-Analyst test guide' passing rate is so high are varied. That is

because our test bank includes two forms and they are the PDF test questions which are selected by the senior lecturer, published authors and professional experts and the practice test software which can test your mastery degree of our InsuranceSuite-Analyst study question at any time. The two forms cover the syllabus of the entire InsuranceSuite-Analyst test. You will pass the InsuranceSuite-Analyst exam with it.

Guidewire Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam Sample Questions (Q26-Q31):

NEW QUESTION # 26

_____ provide starting points for solutions that can be customized and added to the Guidewire products.

- A. User Story Cards
- B. Extension Packs
- C. Product Documentation
- **D. Accelerators**

Answer: D

Explanation:

Comprehensive and Detailed Explanation:

Accelerators (Option D) are the correct Guidewire term for pre-built solutions provided by Guidewire or its partners (available on the Guidewire Marketplace).

* Definition: An Accelerator is a software asset that provides a "starting point" for a specific business problem or integration (e.g., a "London Market Accelerator" or a specific "Payment Gateway Accelerator").

* Purpose: They are designed to be customized. Unlike the core product (which you configure) or a SaaS service (which you consume), an accelerator is often code or configuration that you download, install, and then modify to fit your specific project needs. They are not "plug-and-play" in the strictest sense; they accelerate the development by providing the foundational code.

Why other options are incorrect:

* B. Extension Packs: While similar, "Extension Packs" (now often referred to as simply Extensions or Standards-based templates) typically refer to smaller, verified add-ons that might not require as much

"customization" as an accelerator. However, "starting point for solutions" is the textbook definition for Accelerators.

* A. User Story Cards: These are documentation artifacts, not software solutions.

NEW QUESTION # 27

Please select Elaboration session best practice(s):

- A. Focus on the client's current workflow in order to write requirements that define their current system
- **B. Don't allow multiple conversations to go on at the same time**
- C. Revisit decisions made in prior sessions
- D. Don't suggest that something is out of scope

Answer: B

Explanation:

Elaboration sessions are structured, collaborative workshops intended to validate requirements, align stakeholders, and refine user stories based on Guidewire out-of-the-box functionality. Following best practices ensures these sessions remain productive and value-focused.

A key best practice is preventing multiple conversations from occurring at the same time (Option A). Side conversations reduce focus, create misalignment, and often result in missed decisions or conflicting outcomes.

A single-threaded discussion ensures all participants hear the same information and contribute effectively.

The other options contradict Guidewire elaboration best practices. Analysts should suggest when something is out of scope (Option B) to protect delivery timelines and avoid scope creep. Revisiting decisions from prior sessions (Option C) undermines progress and should only occur if new, critical information emerges. Finally, focusing on the client's current workflow (Option D) leads to replicating legacy systems; Guidewire elaboration should emphasize future-state processes enabled by the product.

NEW QUESTION # 28

Which of the following are deliverables during the Inception Phase of a project? choose two

- A. Process Maps
- **B. Conceptual Sprint Plan**
- **C. Estimated User Stories**
- D. Detail Design Document (DDD)

Answer: B,C

Explanation:

Comprehensive and Detailed Explanation:

The Inception Phase focuses on defining the project scope and planning the execution. The two primary deliverables that enable the project to move into the Development (Construction) phase are:

* Estimated User Stories (Option C): During Inception, the team conducts "Elaboration" workshops to define requirements as User Stories. Critically, these stories must be estimated (usually in story points) by the development team. Without estimates, the scope cannot be measured against the timeline.

* Conceptual Sprint Plan (Option B): Using the estimates from Option C, the team creates a high-level roadmap (Conceptual Sprint Plan) that slots the user stories into specific sprints. This sets the expectation for what will be delivered when and defines the Minimum Viable Product (MVP).

Why other options are incorrect:

* A. Detail Design Document (DDD): This is associated with "Waterfall" methodologies (Big Design Up Front). In Guidewire's Agile methodology (SurePath), detailed technical design happens during the sprint, just before implementation, not as a massive document at the start.

* D. Process Maps: While Process Maps are created (often as part of the "Current State vs. Future State" analysis), they are typically considered inputs or supporting artifacts for the User Stories, rather than a primary "Phase Deliverable" in the same critical category as the Schedule (Plan) and the Scope (Backlog).

NEW QUESTION # 29

Which of the activities below could assist an analyst in determining whether changes to application logic are needed? (Choose two)

- **A. Identify if any objects or activities need to be created automatically to improve the process**
- **B. Consider whether validation is needed for entered data and if an alert or message should display**
- C. Interrogate the widgets to inspect the accuracy of Gosu code
- D. Review the fields on each screen to identify data model entities to be added or removed

Answer: A,B

Explanation:

Application logic in Guidewire InsuranceSuite governs how the system behaves, including automation, validations, and business rules. Business Analysts play a key role in determining when changes to this logic are required, even though they do not implement the logic themselves.

Identifying whether objects or activities should be created automatically (Option A) directly relates to application logic. For example, automatically creating activities, notes, or assignments based on certain conditions requires business rules or workflow logic.

Considering whether validations or alert messages are needed (Option B) is another core indicator of application logic changes. Data validation rules, warning messages, and error handling are all implemented through logic and must be clearly defined by analysts.

The remaining options are not analyst-level logic activities. Inspecting Gosu code (Option C) is a developer responsibility. Reviewing screen fields to add or remove entities (Option D) relates to data model and UI changes rather than application logic behavior.

By focusing on automation and validation needs, analysts help ensure Guidewire applications behave correctly and consistently with business expectations.

NEW QUESTION # 30

Guidewire Training Resources include content on the Out-of-the-Box functionality of Guidewire products. What website would you access to gain information and details on how to write a Quote?

- **A. <https://educationmarketplace.guidewire.com>**
- B. <http://www.guidewire.com>
- C. <http://education.guidewire.com>
- D. <https://marketplace.guidewire.com>

Answer: A

Explanation:

Guidewire provides structured training resources that explain Out-of-the-Box (OOTB) functionality, including core business processes such as quoting, policy issuance, endorsements, and renewals. The correct platform for accessing this training content is the Guidewire Education Marketplace, making Option B the correct answer.

The Education Marketplace is Guidewire's official learning portal for analysts, developers, and project team members. It contains role-based courses, videos, documentation, and hands-on learning paths that explain how Guidewire products work from a functional and technical perspective. Training modules on quoting walk users through OOTB workflows, required data elements, validation rules, and system behavior.

The other options do not serve this purpose. The main Guidewire website (Option A) provides corporate and marketing information.

The Guidewire Marketplace (Option C) focuses on partner solutions and extensions.

The legacy education URL (Option D) is no longer the primary access point for training materials.

NEW QUESTION # 31

.....

The versions of our InsuranceSuite-Analyst study guide includes the PDF version, PC version, APP online version. Each version's using method and functions are different and the client can choose the most convenient version to learn our InsuranceSuite-Analyst exam materials. For example, the PDF version is convenient for you to download and print our InsuranceSuite-Analyst Test Questions and is suitable for browsing learning. If you use the PDF version you can print our InsuranceSuite-Analyst test torrent on the papers and it is convenient for you to take notes. You can learn our InsuranceSuite-Analyst test questions at any time and place.
