Veeam Certified Engineer v12 Sample Questions (Q154-Q159):

NEW QUESTION # 154
On Monday, a backup administrator found out that some backup jobs were missing from a configuration. They want to roll back the configuration database to Friday's state. Which configuration restore mode should be used?

- A. Instant SQL Recovery
- B. Migrate
- C. Restore
- D. Veeam Explorer for Microsoft SQL

Answer: C

Explanation:
To roll back the configuration database to Friday's state, the backup administrator should use the
'Restore' mode available in Veeam Backup & Replication. This mode allows for the entire configuration backup to be restored, which includes the job settings and history, and brings the configuration database back to the state it was in at the time of the backup.

NEW QUESTION # 155
An engineer has used a Linux Hardened Repository as the backup repository. The immutability period is set to 60 days.
The backup settings are:
Retention Policy: 14 days
GFS Weekly full backup: 1 week
GFS Monthly full backup: 6 months
If a full backup is created on 27th May 2023 with a monthly GFS flag, when will this restore point be automatically deleted?

- A. 28th November 2023
- B. 28th July 2023
- C. 2V June 2023
- D. 5th August 2023

Answer: A

Explanation:
The immutability period set on a Linux Hardened Repository prevents deletion of backup files for the duration of the immutability period. In this case, it is set to 60 days. However, the GFS (Grandfather-Father-Son) retention policy specifies that a monthly full backup is to be kept for 6 months. Since the full backup was created on 27th May 2023 and flagged as a monthly GFS backup, it will be retained for 6 months irrespective of the retention policy or the immutability setting. Hence, the restore point will be automatically deleted after 6 months, which would be on the 28th of November 2023.References:

NEW QUESTION # 156

A corporation needs to give their MS SQL DBAs a way to restore their MS SQL databases. Which action would allow the corporation to grant this access without giving access to other operations?

- A. Delegate application item recoveries to the DBA Group
- B. Give the DBA group Restore Operator access to the backup server
- C. Deny access to restore VMs in Enterprise Manager
- D. Give the DBA group Restore Operator access to MS SQL DBs in Enterprise Manager

Answer: D

Explanation:
To grant MS SQL DBAs the ability to restore their databases without giving access to other operations, the appropriate action is to give the DBA group Restore Operator access specifically to MS SQL databases within Veeam Enterprise Manager. This role-based access control allows DBAs to perform the needed restores while restricting access to other functionality.

NEW QUESTION # 157
At 18:00, after a Windows update installation, a VM is stuck in an infinite boot loop. The VM is configured as follows.

Platform	VMware vSphere
Application	SQL Server
Disk 1 (OS)	60 GB, CBT enabled
Disk 2 (DATA)	400 GB, CBT enabled

The last backup was created at 01:00. Choose the recovery approach that provides the lowest RTO with the least data loss.

- A. Instant VM Recovery
- B. VM disk recovery with quick rollback of Disk 1
- C. Virtual disk restore of Disk 1
- D. Instant VM Recovery with quick rollback

Answer: B

Explanation:
Explanation
It is recommended that you use quick rollback if you restore a VM or VM disk after a problem that has occurred at the level of the VM guest OS - for example, there has been an application error or a user has accidentally deleted a file on the VM guest OS
"Windows update installation is a OS Problem"

NEW QUESTION # 158
In Veeam Enterprise Manager, what granular restoration permission can be set for the Restore Operator role?

- A. Active Directory items
- B. File items
- C. OneDrive items
- D. SharePoint items

Answer: B

Explanation:
In Veeam Enterprise Manager, granular restoration permissions can be set for the Restore Operator role, including the restoration of file items. This role allows designated users to perform file-level restores, ensuring that they can recover individual files without having full administrative privileges over the backup infrastructure.References:
