Microsoft Administering Information Security in Microsoft 365 認定 SC-401 試験問題 (Q135-Q140):

質問 # 135
You have a Microsoft 365 E5 subscription. The subscription contains a user named User1 and the sensitivity labels shown in the following table.

Name	Authenticated users: View content (VIEW)	Authenticated users: Copy and extract content (EXTRACT)	Authenticated users: Export content (EXPORT)
Label1	Granted	Not granted	Not granted
Label2	Granted	Granted	Not granted
Label3	Granted	Not granted	Granted

You publish the labels to User1.
The subscription contains the files shown in the following table.

Name	Label
File1	Label1
File2	Label2
File3	Label3

Which files can Microsoft 365 Copilot summarize for User1?

- A. File3 only
- B. File1, File2, and File3
- C. File2 and File3 only
- D. File2 only

正解：D

解説：

For Microsoft 365 Copilot to summarize data within a file, the user must have both the EXTRACT and VIEW usage rights on the sensitivity label applied to that file, according to Microsoft Learn.

This ensures that Copilot can access and process the file's content for summarization purposes.

If a file is encrypted using Azure Rights Management without a sensitivity label, the same permissions (EXTRACT and VIEW) are still required for Copilot to function.

質問 # 136

You have a Microsoft 365 E5 subscription.

You create a sensitivity label named Label1 and publish Label1 to all users and groups.

You have the following files in a SharePoint site:

* File1.doc
* File2.docx
* File3.xlsx
* File4.txt

You need to identify which files can have Label1 applied.

Which files should you identify?

- A. File2.docx only
- B. File1.doc File2-docx, and File3.xlsx only
- C. File2.docx and File3.xlsx only
- D. File1.doc File2-docx, File3.xlsx, and File4.txt

正解：C

解説：

Sensitivity labels can be applied to modern Office file types that support protection:

Supported: .docx, .xlsx, .pptx, etc.

Not supported: Legacy formats like .doc or non-Office formats like .txt.

Therefore, only File2.docx and File3.xlsx can have Label1 applied.

質問 # 137

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft 365 tenant and 500 computers that run Windows 11. The computers are onboarded to Microsoft Purview.

You discover that a third-party application named Tailspin_scanner.exe accessed protected sensitive information on multiple computers.

Tailspin_scanner.exe is installed locally on the computers.

You need to block Tailspin_scanner.exe from accessing sensitive documents without preventing the application from accessing other documents.

Solution: From the Microsoft Defender for Cloud Apps, you mark the application as Unsanctioned.

Does this meet the goal?

- A. No
- B. Yes

正解：A

解説：

You can unsanction a specific risky app by clicking the three dots at the end of the row. Then select Unsanction. Unsanctioning an app doesn't block use, but enables you to more easily monitor its use with the Cloud Discovery filters. You can then notify users of the unsanctioned app and suggest an alternative safe app for their use.

Answer Area

Upload:
- Data hashes
- Data in the XML format
- Digitally signed data

Use:
- Azure Storage Explorer
- EDM upload agent
- Microsoft Purview portal
- The Set-DlpKeywordDictionary cmdlet

EDM does not store raw data; instead, it requires hashed versions of sensitive data for privacy and security.
To upload the hashed data, Microsoft provides the EDM upload agent. This ensures that the data is securely processed and recognized by the EDM service in Microsoft 365.
