

PCCP Valid Practice Materials - 100% PCCP Accuracy

1. Strength

LOADING	FORMULA	FLEXURAL STRENGTH	COMPRESSIVE STRENGTH
Third Point Loading	$R = PL/bd^2$	3.8 Mpa (550 psi)	
Center Point Loading	$R = 3PL/2bd^2$	450 Mpa (650 psi)	
	$R_c/P/A$		24.1 Mpa (3500psi)

Rate of Loading = 125 ~ 175 psi/min

2. Consistency

- 10~40mm if vibrated
- 40~75mm if not vibrated

3. Forms

- Steel
- Should not deviate for more than 1cm from true lines
- Remain undisturbed for 24 hours

4. Mixing Concrete

- Mixing
 - 50~90 seconds
- Transporting
 - <45 min, if non-agitating trucks
 - <90 min, if agitating trucks

5. Placing

- Consolidated by vibrator, vertical, 15sec/location, 50~60 interval
- Placing concrete adjoining a newly constructed lane
 - Must attained 14-day strength if mechanical eqpt is to be placed on the new lane
 - After 3 days if finishing eqpt only is to be placed on the new lane

6. Test Specimen

- 1 set-3 concrete beams, 6'x6'x21' for every 330 sq.m., 230mm depth, or per 75 cu.m.
- Sample should be taken from two or more regular intervals during discharge of middle portion batch
- 2 layers, rodded 63 times

7. Joints

- Longitudinal Joint
 - Lanes are constructed separately
 - Deformed tie bars, perpendicular to this joint, not painted
- Transverse Contraction Joint
 - Known as weakened plane joint, every 4.5m
 - Concrete sawing for contraction joint
 - 50mm depth, 6mm width
 - Saw 4~24 hours from the start of concreting
 - Sawing is omitted if cracks occurred at or near the joint
- Transverse Construction Joint
 - Known as cold joint
 - Formed if there is an interruption of 30 min in concreting operation
 - No cold joint within 1.5m from expansion or contraction joint.
 - Dowels are load transfer device, round bars parallel to centerline, painted with thin film of bitumen to prevent corrosion and facilitate sliding

8. Final Finish

- Brooming, 1.5mm deep

Engr. Rowell A. Atendido
Civil Engr. / Materials Engr. II

ValidExam is a reliable study center providing you the valid and correct PCCP questions & answers for boosting up your success in the actual test. PCCP PDF file is the common version which many candidates often choose. If you are tired with the screen for study, you can print the PCCP Pdf Dumps into papers. With the pdf papers, you can write and make notes as you like, which is very convenient for memory. We can ensure you pass with Palo Alto Networks study torrent at first time.

ValidExam Palo Alto Networks PCCP exam information are cheap and fine. We use simulation questions and answers dedication to our candidates with ultra-low price and high quality. We sincerely hope that you can pass the exam. We provide you with a convenient online service to resolve any questions about Palo Alto Networks PCCP Exam Questions for you.

>> PCCP Valid Practice Materials <<

100% PCCP Accuracy - Trustworthy PCCP Exam Torrent

With the help of PCCP study materials, you can conduct targeted review on the topics which to be tested before the exam, and then you no longer have to worry about the problems that you may encounter a question that you are not familiar with during the exam. With PCCP study materials, you will not need to purchase any other review materials. We have hired professional IT staff to maintain PCCP Study Materials and our team of experts also constantly updates and renew the question bank according to changes in the syllabus. With PCCP study materials, you can study at ease, and we will help you solve all the problems that you may encounter in the learning process.

Palo Alto Networks PCCP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Network Security: This domain targets a Network Security Specialist and includes knowledge of Zero Trust Network Access (ZTNA) characteristics, functions of stateless and next-generation firewalls (NGFWs), and the purpose of microsegmentation. It also covers common network security technologies such as intrusion prevention systems (IPS), URL filtering, DNS security, VPNs, and SSL• TLS decryption. Candidates must understand the limitations of signature-based protection, deployment options for NGFWs, cybersecurity concerns in operational technology (OT) and IoT, cloud-delivered security services, and AI-powered security functions like Precision AI.
Topic 2	<ul style="list-style-type: none">• Security Operations: This final section measures skills of a Security Operations Analyst and covers key characteristics and practices of threat hunting and incident response processes. It explains functions and benefits of security information and event management (SIEM) platforms, security orchestration, automation, and response (SOAR) tools, and attack surface management (ASM) platforms. It also highlights the functionalities of Cortex solutions, including XSOAR, Xpanse, and XSIAM, and describes services offered by Palo Alto Networks' Unit 42.
Topic 3	<ul style="list-style-type: none">• Secure Access: This part of the exam measures skills of a Secure Access Engineer and focuses on defining and differentiating Secure Access Service Edge (SASE) and Secure Service Edge (SSE). It covers challenges related to confidentiality, integrity, and availability of data and applications across data, private apps, SaaS, and AI tools. It examines security technologies including secure web gateways, enterprise browsers, remote browser isolation, data loss prevention (DLP), and cloud access security brokers (CASB). The section also describes Software-Defined Wide Area Network (SD-WAN) and Prisma SASE solutions such as Prisma Access, SD-WAN, AI Access, and enterprise DLP.
Topic 4	<ul style="list-style-type: none">• Cybersecurity: This section of the exam measures skills of a Cybersecurity Practitioner and covers fundamental concepts of cybersecurity, including the components of the authentication, authorization, and accounting (AAA) framework, attacker techniques as defined by the MITRE ATT&CK framework, and key principles of Zero Trust such as continuous monitoring and least privilege access. It also addresses understanding advanced persistent threats (APT) and common security technologies like identity and access management (IAM), multi-factor authentication (MFA), mobile device and application management, and email security.

Palo Alto Networks Certified Cybersecurity Practitioner Sample Questions (Q149-Q154):

NEW QUESTION # 149

An administrator finds multiple gambling websites in the network traffic log.
What can be created to dynamically block these websites?

- A. Custom signatures
- B. URL category
- C. Application group
- D. Decryption policy

Answer: B

Explanation:

URL categories classify websites based on content type or risk, enabling dynamic policy enforcement such as blocking or allowing access. Administrators can create custom URL categories to group sites like gambling domains and apply blocking rules across the firewall infrastructure. Palo Alto Networks firewalls leverage URL categorization combined with threat intelligence to provide granular web filtering, reducing exposure to malicious or unwanted sites. This dynamic grouping approach is more manageable and scalable than creating individual signatures or static lists and allows for automated policy application aligned with organizational compliance requirements.

NEW QUESTION # 150

Which type of attack involves sending data packets disguised as queries to a remote server, which then sends the data back to the attacker?

- A. Port evasion
- B. Command-and-control (C2)
- C. DNS tunneling
- D. DDoS

Answer: C

Explanation:

DNS tunneling is an attack technique where data packets are disguised as DNS queries and sent to a remote server. That server, often under the attacker's control, responds with additional data or instructions, effectively creating a covert command-and-control (C2) channel over DNS.

NEW QUESTION # 151

What is a key method used to secure sensitive data in Software-as-a-Service (SaaS) applications?

- A. Allow downloads to managed devices but block them from unmanaged devices.
- B. Allow downloads to both managed and unmanaged devices.
- C. Allow users to choose their own applications to access data.
- D. Leave data security in the hands of the cloud service provider.

Answer: A

Explanation:

One of the best practices for securing sensitive data in SaaS applications is to control the access and usage of data based on the device type. Managed devices are those that are enrolled and monitored by the organization's IT department, and have security policies and controls applied to them. Unmanaged devices are those that are not under the organization's control, such as personal laptops or mobile phones. Allowing downloads to managed devices but blocking them from unmanaged devices prevents data leakage and unauthorized access to sensitive data. This can be achieved by using a cloud access security broker (CASB) solution, such as Prisma SaaS from Palo Alto Networks, which can enforce granular policies based on device posture, user identity, and data sensitivity¹². References: 1: Securing SaaS applications on the cloud is a critical aspect of protecting sensitive data and maintaining the trust of customers. By implementing best practices, such as enhanced authentication, data encryption, Break Glass, and oversight, organizations can mitigate the security risks associated with SaaS applications²: Prisma SaaS - Palo Alto Networks

NEW QUESTION # 152

Which analysis detonates previously unknown submissions in a custom-built, evasion-resistant virtual environment to determine real-world effects and behavior?

- A. Bare-metal
- B. Pre-exploit protection
- C. Dynamic
- D. Static

Answer: C

Explanation:

Dynamic analysis is a method of malware analysis that executes the malware in a controlled environment and observes its behavior and effects. Dynamic analysis can reveal the malware's network activity, file system changes, registry modifications, and other indicators of compromise. Dynamic analysis is performed by Palo Alto Networks WildFire, a cloud-based service that analyzes unknown files and links from various sources, such as email attachments, web downloads, and firewall traffic. WildFire uses a custom-built, evasion-resistant virtual environment to detonate the submissions and generate detailed reports and verdicts. WildFire can also share the threat intelligence with other Palo Alto Networks products and partners to prevent future attacks. References: WildFire Overview, WildFire Features, WildFire Dynamic Analysis

NEW QUESTION # 153

Which technology secures software-as-a-service (SaaS) applications and network data, and also enforces compliance policies for application access?

- A. DNS Security
- B. DLP
- C. URL filtering
- **D. CASB**

Answer: D

Explanation:

A Cloud Access Security Broker (CASB) secures SaaS applications and network data by providing visibility, data security, threat protection, and compliance enforcement. It acts as a control point between users and cloud service providers to enforce security policies.

NEW QUESTION # 154

.....

The objective of the ValidExam is to help PCCP exam applicants crack the test. It follows its goal by giving a completely free demo of Real PCCP Exam Questions. The free demo will enable users to assess the characteristics of the Palo Alto Networks Certified Cybersecurity Practitioner exam product.
