OmniStudio-Developer Study Tool Will Be Valuable Investment with Reasonable Prices - DumpStillValid

It is all due to the top features of Salesforce Certified OmniStudio Developer OmniStudio-Developer exam dumps. These features are three Salesforce Certified OmniStudio Developer exam questions formats, free exam dumps download facility, three months updated Salesforce OmniStudio-Developer exam dumps download facility, affordable price and 100 exams passing money back guarantee. All these Salesforce Certified OmniStudio Developer dumps features are designed to assist you in Salesforce Certified

OmniStudio Developer OmniStudio-Developer Exam Preparation and enable you to pass the exam with flying colors.

Salesforce Certified OmniStudio Developer Sample Questions (Q175-Q180):

NEW QUESTION # 175

A company wants to allow agents to send customers a quote for signature. The quote is a document created using a DocuSign template that has been prefilled with all of the quote details. The document will be emailed to one or more recipients for signature. How should a developer configure this functionality in OmniScript?

- A. Email Action
- B. DocuSign Signature Action
- **C. DocuSign Envelope Action**
- D. PDF Acwm

Answer: C

Explanation:

Explanation

A DocuSign Envelope Action can be used to create and send a document for signature using a DocuSign template. The developer can specify the template ID, recipient details, and prefill data in the action configuration

NEW QUESTION # 176

Which two of these options can a developer use to retrieve data from a Salesforce object?

Choose 2 answers

- **A. A DataRaptor Load Action**
- B. A DataRaptor Extract Action
- C. A DataRaptor or Post Action
- **D. A Lookup Input Element**

Answer: A,D

Explanation:

Explanation

A DataRaptor Load Action can be used to retrieve data from a Salesforce object by specifying the object name, fields, and filter criteria. A Lookup Input Element can be used to retrieve data from a Salesforce object by allowing the user to search for a record using a lookup field

NEW QUESTION # 177

The phone number of a Contact is changed in an OmniScript. What should an OmniStudio Developer configure to update the Contact record in Salesforce?

- A. A Data Mapper Transform that maps the new phone number to the old Phone Number field
- **B. A Data Mapper Load that includes the RecordId, the upsert key selected, and the new phone number**
- C. A Data Mapper Extract that includes the RecordId, the upsert key selected, and the new phone number
- D. A Data Mapper Transform that includes the previous phone number with the upsert key selected and the new phone number

Answer: B

Explanation:

Updating Salesforce data from an OmniScript requires a write operation, so the correct tool is a Data Mapper Load. A Data Mapper Extract reads data from Salesforce; it cannot update the Contact record. A Data Mapper Transform only reshapes data between formats and does not perform the Salesforce database update. The Data Mapper Load should include the Contact identifier and the new Phone value so Salesforce can update the correct record. When upsert behavior is needed, the appropriate field mapping must identify the key used to determine whether the record already exists. The question asks specifically about changing a Contact phone number from an OmniScript, so the correct configuration is a Data Mapper Load with the RecordId/key and updated phone value.

NEW QUESTION # 178

An OmniStudio Developer is using a Data Mapper Transform. The source JSON has a field named Phone_Number, which is a string. The target JSON requires the field to be an array named ContactDetails containing a Phone object: { "ContactDetails": [{ "Phone": "..."}]}. Which mapping technique is required?

- A. Mapping the source to the nested target path and relying on the Data Mapper to create the array and object nodes
- B. Mapping the source to the root node
- C. Direct mapping from Phone_Number to ContactDetails:Phone
- D. Creating an intermediate array in the Formula tab

Answer: A

Explanation:

A Data Mapper Transform is used to restructure input JSON into the output JSON format required by a target system. Since the target requires a nested array of objects, the developer must map the source value into the correct nested target path so the Data Mapper output structure creates the ContactDetails array and Phone object. A flat direct mapping does not describe the required parent array and child object structure. A Formula is not required just to place an existing source value into a nested output structure; formulas are used when the value itself must be calculated or transformed. Mapping to the root node would lose the required ContactDetails and Phone hierarchy. The correct method is nested target path mapping.

NEW QUESTION # 179

A developer has an existing DataRaptor Load that insert Contact records with inputs as LastName and firstName. The DataRaptor works as expected when previewed.

The developer creates an integration Procedure to test the DataRaptor and is using a SetValues element in the Integration Procedure to set the first name and last name for the contact record. The DataRaptor and Integration Procedure are set up as shown in the exhibit below.

When the developer executes the Integration procedure in preview, the following error message displays:

Required fields are missing: [last Name]",

How should the developer address this issue?

- A. The Set values Action Keys should include the DataRaptor Post Action element name path, e,g LoadContactDetails, lastname
- B. SetValuesContactDetails should have been added to Additional input of DataRaptor Post Action in Integration Procedure
- C. The valid field names should be added in the Domain object field in the DataRaptor
- D. The DataRaptor Post Action in the integration procedure should have been executed before the Set Values Action

Answer: B

NEW QUESTION # 180

.....

In the past ten years, we have made many efforts to perfect our Salesforce OmniStudio-Developer study materials. Our OmniStudio-Developer study questions cannot tolerate any small mistake. All staff has made great dedication to developing the

Salesforce OmniStudio-Developer Exam simulation. Our professional experts are devoting themselves on the compiling and updating the exam materials.
