It includes forming the right team, promoting agile thinking, and driving successful Fit-to-Standard workshops that align the project with business goals in a cloud environment.

SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition C-S4CPB-2502 Prüfungsfragen mit Lösungen (Q10-Q15):

10. Frage

What defines the organizational entities that are required in SAP Central Business Configuration? Note:

There are 2 correct answers to this question

- A. System consistency checks
- B. Added partner content
- C. The selected scope
- D. The selected deployment target

Antwort: A,C

11. Frage

In which deployment models is application management the responsibility of the customer? Note: There are 3 correct answers to this question.

- A. Private Cloud
- B. Software as a Service
- C. Platform as a Service
- D. On premise
- E. Infrastructure as a Service

Antwort: A,C,D

Begründung:

In different deployment models, the responsibility for application management varies, with the customer typically taking on more responsibility in certain models:

* Platform as a Service (PaaS): In this model, the customer is responsible for managing the applications they develop or deploy on

the platform, even though the provider manages the underlying infrastructure, operating systems, and middleware.

* On premise: In an on-premise deployment, the customer has full responsibility for managing both the applications and the infrastructure they run on. This includes maintenance, updates, security, and compliance for both the applications and the hardware/software infrastructure.

* Private Cloud: Similar to on-premise deployments, customers in a private cloud model are typically responsible for managing their applications, including SAP S/4HANA Cloud Public Edition. The cloud provider may manage the cloud infrastructure and virtualization layer, but the customer often handles application-level management tasks, including updates, customization, and user management.

These deployment models contrast with Software as a Service (SaaS), where the service provider is generally responsible for managing the application, including its maintenance, updates, and availability.

12. Frage

If a customer wants to develop their own custom application and integrate it with SAP S/4HANA Cloud Public Edition, what tools would you recommend to develop the app? Note: There are 2 correct answers to this question.

- A. SAP HANA Cloud
- B. SAP Build
- C. SAP Business Application Studio
- D. SAP Cloud Portal Service

Antwort: B,C

Begründung:

SAP Business Application Studio and SAP Build are two tools that enable customers to develop their own custom applications and integrate them with SAP S/4HANA Cloud Public Edition. SAP Business Application Studio is a cloud-based development environment that offers both low-code and full-stack development capabilities. It supports various SAP technologies and frameworks, such as SAP Fiori, SAPUI5, SAP Cloud Application Programming Model, and SAP Cloud SDK. SAP Build is a cloud-based prototyping and user research tool that helps customers to design and test user interfaces for their applications. It provides a drag- and-drop interface, a library of UI components, and integration with SAP Web IDE and SAP Fiori Launchpad. Both tools are part of the SAP Extension Suite, which provides a range of services and capabilities to extend SAP applications and processes.
