NEW QUESTION # 271

Which of the following operating systems uses the ext4 filesystem type?

- A. Linux
- B. iOS
- C. macOS
- D. Windows

Answer: A

Explanation:

The ext4 (fourth extended filesystem) is a journaling file system for Linux. It is widely used in many Linux distributions due to its performance, robustness, and advanced features like large file and volume support.

macOS: Uses filesystems like HFS+ or APFS.

iOS: Uses APFS (Apple File System).

Linux: Uses ext4 among other filesystems like ext3, XFS, Btrfs, etc.

Windows: Uses NTFS, FAT32, and exFAT, not ext4.

NEW QUESTION # 272

A user updates a mobile device's OS. A frequently used application becomes consistently unresponsive immediately after the device is launched. Which of the following troubleshooting steps should the user perform FIRST?

- A. Uninstall and reinstall the application.
- B. Check for application updates.
- C. Roll back the OS update.
- D. Delete the application's cache.

Answer: B

Explanation:

Checking for application updates is the first troubleshooting step that the user should perform, because the application may not be compatible with the new OS version and may need an update to fix the issue. Deleting the application's cache, rolling back the OS update, or uninstalling and reinstalling the application are possible solutions, but they are more time-consuming and disruptive than checking for updates. Answer:

Explanation:

see the answer below in explanation.

Explanation:

The user is experiencing a system error that prevents them from using the Testing program. The error message indicates that the file MSVCP100.dll is missing from the computer. This file is part of the Microsoft Visual C++ 2010 Redistributable Package, which is required by some applications to run properly. The error may have occurred due to a corrupted or incomplete software deployment. To resolve this issue, the user needs to restore the missing file and register it in the system. One possible way to do this is to copy the file from another computer that has the Testing program installed and working, and then use the regsvr32 command to register it. The steps are as follows:

- * On another computer (User-PC02) that has the Testing program installed and working, locate the file MSVCP100.dll in the folder C:\Program Files\Testing.
- * Share the folder C:\Windows\System32 on User-PC02 by right-clicking on it, selecting Properties, then Sharing, then Advanced Sharing, then checking Share this folder, then clicking OK.
- * On the user's computer (User-PC01), open a command prompt as an administrator by clicking Start, typing cmd, right-clicking on Command Prompt, and selecting Run as administrator.
- * In the command prompt, type the following command to copy the file MSVCP100.dll from User-PC02 to User-PC01: copy "C:\Program Files\Testing\msvcp100.dll" "\User-PC02\C\$\Windows\System32"
- * After the file is copied, type the following command to register it in the system: regsvr32 msvcp100.dll
