- A. A host OS is the virtualization software layer.
- B. A host machine is a physical machine.
- C. A guest machine is a virtual machine (VM).
- D. A guest OS is the operating system running on a virtual machine (VM).

**Answer: A**

Explanation:

The HCIA-Cloud Computing syllabus clearly defines the basic terminology used in virtualization.

Option A is correct. A guest OS refers to the operating system installed and running inside a virtual machine.

Option B is correct. A guest machine is another term for a virtual machine (VM).

Option C is correct. A host machine typically refers to the physical server that provides hardware resources for virtualization.

Option D is false. A host OS is not the virtualization software layer. The virtualization layer is the hypervisor (such as KVM, Xen, or Fusion Compute). In some architectures, the host OS and hypervisor may coexist, but they are not the same concept.

Therefore, the false statement is D.
