## Cloud Security Alliance Certificate of Cloud Security Knowledge v5 (CCSKv5.0) Sample Questions (Q108-Q113):

### NEW QUESTION # 108

Which of the following is a responsibility of Cloud customer?

- A. Secure Virtualization Infrastructure
- B. Meta Structure
- C. Isolation
- D. Image Asset Management

**Answer: D**

Explanation:

Image asset management. Cloud compute deployments are based on master images-be it a virtual machine, container, or other code-that are then run in the cloud. This is often highly automated and results in a larger number of images to base assets on, compared to traditional computing master images. Managing these-including which meet security requirements, where they can be deployed, and who has access to them-is an important security responsibility.

#### **NEW QUESTION # 109**

APIs and web services require extensive hardening and must assume attacks from authenticated and unauthenticated adversaries.

- **A. True**
- B. False

**Answer: A**

#### **NEW QUESTION # 110**

In the cloud provider and consumer relationship, which entity manages the virtual or abstracted infrastructure?

- A. Only the cloud consumer
- B. It is outsourced as per the entity agreement
- **C. Both the cloud provider and consumer**
- D. Only the cloud provider
- E. It is determined in the agreement between the entities

**Answer: C**

#### **NEW QUESTION # 111**

What is a key component of governance in the context of cybersecurity?

- A. Standardizing technical specifications for security control
- **B. Defining roles and responsibilities**
- C. Defining tools and technologies
- D. Enforcement of the Penetration Testing procedure

**Answer: B**

Explanation:

A key component of governance in cybersecurity is defining roles and responsibilities. Governance ensures that the right people within an organization are assigned specific duties related to security and that they are held accountable for those responsibilities. This helps establish clear lines of authority and accountability, ensuring that everyone knows what they are responsible for in terms of security practices, policies, and procedures.

While standardizing technical specifications, defining tools and technologies, and enforcing penetration testing are important elements of a cybersecurity strategy, defining roles and responsibilities is essential for overall governance to ensure that security practices are consistently followed.

#### **NEW QUESTION # 112**

What is a common characteristic of Platform as a Service (PaaS)?

- A. Fully hosted application stack
- **B. Integration with application development frameworks and middleware capabilities**
- C. Satisfies compliance and security requirements
- D. Limited configuration options increases security risks

**Answer: B**

Explanation:

Platform as a Service (PaaS) provides a development and deployment environment with resources that enable users to deliver everything from simple cloud-based apps to sophisticated, cloud-enabled enterprise applications.

According to CSA Security Guidance v4.0 - Domain 1: Cloud Computing Concepts and Architectures:

"PaaS adds an additional layer of integration with application development frameworks, middleware capabilities, and functions such as databases, messaging, and queuing. These services allow developers to build applications on the platform with programming languages and tools that are supported by the stack." (CSA Security Guidance v4.0, Domain 1) This integration with app development and middleware is the key defining feature of PaaS.
