

High Pass-Rate ZDTE Trusted Exam Resource | ZDTE 100% Free Pdf Pass Leader

In order to let customers understand our ZDTE exam dumps better, our company will provide customers with a trail version. And the trail version is free for customers. The trail version will offer demo to customers, it means customers can study the demo of our ZDTE Exam Torrent for free. If you use our ZDTE test quiz, we believe you will know fully well that our product is of superior quality, other products can't be compared with it. Don't hesitate, just buy our ZDTE test quiz!

Now we can say that Zscaler Digital Transformation Engineer (ZDTE) exam questions are real and top-notch Zscaler ZDTE exam questions that you can expect in the upcoming Zscaler Digital Transformation Engineer (ZDTE) exam. In this way, you can easily pass the ZDTE exam with good scores. The countless ZDTE Exam candidates have passed their dream ZDTE certification exam and they all got help from real, valid, and updated ZDTE practice questions, You can also trust on Itexamguide and start preparation with confidence.

>> ZDTE Trusted Exam Resource <<

ZDTE Pdf Pass Leader | ZDTE Latest Exam Pdf

Our company Itexamguide is glad to provide customers with authoritative study platform. Our ZDTE quiz torrent was designed by a lot of experts and professors in different area in the rapid development world. At the same time, if you have any question on our ZDTE exam questions, we can be sure that your question will be answered by our professional personal in a short time. In a word, if you choose to buy our ZDTE Quiz torrent, you will have the chance to enjoy the authoritative study platform provided by our company.

Zscaler Digital Transformation Engineer Sample Questions (Q59-Q64):

NEW QUESTION # 59

An IT administrator is reviewing the recently configured ZDX module in their environment and checks the performance data on the dashboard. The administrator notices that no software inventory has populated. What could be a probable reason?

- A. ZDX client is not configured to collect inventory data
- B. ZDX license doesn't have inventory collection entitlement
- C. ZDX client version being used is 4.3
- D. Zscaler Client Connector needs to be whitelisted on the EDR tool

Answer: A

Explanation:

Zscaler Digital Experience (ZDX) relies on Zscaler Client Connector to collect device and application telemetry from endpoints. Performance metrics (such as device, network, and application scores) are enabled as part of the core ZDX deployment, which explains why the administrator can already see performance data on the dashboard. However, software inventory is an additional inventory feature that must be explicitly enabled in the ZDX administration settings.

ZDX documentation describes an "Inventory Settings" page where administrators must turn on a setting such as "Collect Software Inventory Data." When this option is enabled and the minimum supported versions of Client Connector and the ZDX module are present, Client Connector begins collecting installed software details and sending this inventory to the ZDX cloud for visualization. If the collection toggle is left disabled, ZDX will continue to show performance metrics but no entries appear under Software Inventory or related views, even though licensing and versions are otherwise correct. The other options listed either relate to licensing, generic EDR conflicts, or a specific client version and do not match the documented dependency on enabling software-inventory collection. Therefore, the most accurate reason is that the ZDX client (via policy) is not configured to collect inventory data.

NEW QUESTION # 60

What is one benefit of OneAPI?

- A. Multiple registration processes
- B. Multiple token requests
- C. Simplifies API integration by using a single entry point
- D. Repeated authorization messages required for increasing security

Answer: C

Explanation:

Zscaler OneAPI is described in the Digital Transformation Engineer and Zero Trust Automation content as a unified API gateway for the entire Zscaler platform. Official OneAPI overview material explains that it provides "a common API endpoint" and "a single programming interface for the entire Zscaler platform," so automation engineers no longer need to manage different endpoints, authentication patterns, or schemas for each product.

The Zero Trust Automation at-a-glance guide further emphasizes that OneAPI "uses a single API to enable automation as an administrator," which accelerates deployment and reduces human error. Study resources summarizing OneAPI reinforce that it "simplifies integration by providing a single-entry point for accessing multiple APIs," reducing complexity and making it easier to build consistent automation across ZIA, ZPA, ZDX, and ZCC.

The other options contradict this design. OneAPI is specifically intended to avoid multiple registration processes and repeated token or authorization workflows; OAuth 2.0 is centralized via ZIdentity so that API clients authenticate once and then use scoped access across services. Therefore, the clearly documented benefit that matches the Zscaler Digital Transformation Engineer description is that OneAPI simplifies API integration by using a single entry point, making C the correct answer.

NEW QUESTION # 61

The Zscaler for Users - Engineer (EDU-202) learning path consists of various solutions covered in eleven courses. Which of the following topics is out of scope for the Zscaler for Users - Engineer learning path?

- A. In-depth overview of Zscaler's architecture platform, including its global scale, additional capabilities, and API infrastructure.
- B. Exploring Intrusion Prevention System, DNS Control, Tenant Restrictions, and secure application segmentation.
- C. Configuration of ZDX for applications, call quality monitoring, probes, diagnostics, alerts, and role-based administration to ensure effective SaaS and web application monitoring.
- D. Enabling versions to control which version (if any) of Zscaler Client Connector is available when end users manually update the app or when you configure automatic app updates.

Answer: D

Explanation:

Official EDU-202 materials describe the Engineer path as focusing on advanced architecture, connectivity, platform, access control, cyberthreat protection, data protection, risk management, ZDX, and Zero Trust Automation. The published learning outcomes explicitly include: discussing the architecture of the Zscaler platform and its API infrastructure; configuring advanced connectivity options; and configuring advanced cybersecurity services and Zscaler Digital Experience (ZDX)-including application monitoring, call quality, probes, diagnostics, alerts, and role-based administration. These map directly to options A, C, and D, which align to Zscaler Architecture, Cyberthreat/Access Control Services (IPS, DNS Control, Tenant Restrictions, segmentation), and ZDX content in the EDU-202 outline.

By contrast, Client Connector App Store "version enablement" and controlling which build is available when users manually or automatically update the app is documented as an administration task in the Client Connector help and is typically taught in the Essentials/Administrator (EDU-200) path, not in the Engineer path. Those materials show how to use the App Store to enable builds and control available versions, positioning it as operational client management rather than an advanced Engineer-level topic. Consequently, option B is considered out of scope for EDU-202 in the ZDTE context.

NEW QUESTION # 62

Which type of sensitive information can be protected using OCR (Optical Character Recognition) technology?

- A. Personally Identifiable Information (PII)
- B. Financial transactions
- C. Network configurations
- D. Software licenses

Answer: A

Explanation:

Zscaler's Data Protection platform integrates Optical Character Recognition (OCR) into its inline Data Loss Prevention (DLP) capabilities. OCR enables Zscaler to extract text embedded within images-such as screenshots, scanned documents, or photos of forms-and subject that text to the same DLP inspection engines that normally analyze plain text content.

Once OCR has converted image content into text, Zscaler can apply predefined dictionaries, custom dictionaries, and advanced classifiers to detect sensitive data types, including personally identifiable information (PII) such as national ID numbers, passport numbers, addresses, or other regulated personal data. This is crucial because many data leaks occur via screenshots or scanned documents that traditional, text- only DLP engines would miss.

While OCR could, in theory, detect patterns related to network configurations, software licenses, or financial transactions, Zscaler's training and exam materials emphasize its use to protect sensitive data in images- especially user-related regulated data such as PII and other compliance-relevant information. Network configurations and software licenses are better addressed through configuration management and IP protection policies, and "financial transactions" describes activities rather than a specific information pattern. Therefore, Personally Identifiable Information (PII) is the best and most exam-accurate answer for the type of sensitive information protected using OCR.

NEW QUESTION # 63

A security analyst is configuring Zscaler Data Loss Prevention (DLP) policies and wants to ensure that sensitive files are accurately identified and inspected. They ask about the methods Zscaler DLP uses to inspect files and detect potential data leaks.

What are the three levels of inspection that Zscaler DLP employs to accurately identify and inspect files?

- A. File header, file extension, and encryption status
- B. Magic Bytes, MIME type, encryption status
- C. File header, file extension, and file signature
- D. Magic Bytes, MIME type, and file extension

Answer: D

Explanation:

The Data Protection section of the Zscaler Digital Transformation study guide explains that, before applying DLP dictionaries, IDM/EDM, or OCR, Zscaler must reliably determine the actual file type being inspected.

To prevent simple evasion techniques (for example, renaming an executable to .pdf), Zscaler performs a three-layer file-type inspection.

The documentation states that Zscaler first examines the file's "magic bytes" (the signature in the file header), then validates the MIME type reported by the content, and finally compares these to the file extension seen in the transaction. This layered approach

ensures that if a user tampers with the extension or the declared MIME type, the underlying binary signature will still reveal the true file type, allowing the correct DLP engine and policy to be applied.

Other attributes like encryption status are indeed considered elsewhere in the DLP workflow (for example, to understand if a file can be decrypted or inspected), but the study guide is explicit that the three levels of file- type inspection are Magic Bytes, MIME type, and file extension, matching option B.

NEW QUESTION # 64

.....

Customers first are our mission, and we will try our best to help all of you to get your ZDTE certification. We offer you the best valid and latest Zscaler ZDTE study practice, thus you will save your time and study with clear direction. Besides, we provide you with best safety shopping experience. The Paypal system will guard your personal information and keep it secret. In addition, the high pass rate will ensure you pass your ZDTE Certification with high score.
