An administrator is tasked with updating firmware on several remote servers without interrupting the operating system. Which method should they use?

- A. Clone the OS configuration
- **B. Utilize iDRAC**
- C. Implement OpenManage Enterprise
- D. Set up System Setup

Answer: B

Explanation:

The Integrated Dell Remote Access Controller (iDRAC) allows administrators to update firmware on PowerEdge servers remotely without interrupting the operating system. iDRAC's out-of-band management enables firmware updates via its web interface or CLI, ensuring minimal disruption. OpenManage Enterprise requires additional software and is for broader management, System Setup requires local access and may interrupt operations, and cloning OS configuration is unrelated to firmware updates. iDRAC is the most efficient method for remote, non-disruptive updates.
