Free PDF Quiz 2026 Fortinet NSE4_FGT_AD-7.6 Updated Reliable Study Materials

Actual4Dumps offers Fortinet NSE 4 - FortiOS 7.6 Administrator (NSE4_FGT_AD-7.6) practice exams (desktop & web-based) which are customizable. It means candidates can set time and Fortinet NSE4_FGT_AD-7.6 questions of the NSE4_FGT_AD-7.6 practice exam according to their learning needs. The Real NSE4_FGT_AD-7.6 Exam environment of practice test help test takers to get awareness about the test pressure so that they become capable to counter this pressure during the final exam.

Fortinet NSE4_FGT_AD-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	• VPN: This domain focuses on implementing meshed or partially redundant IPsec VPN topologies for secure connections.
Topic 2	• Routing: This domain covers configuring static routes for packet forwarding and implementing SD-WAN to load balance traffic across multiple WAN links.
Topic 3	• Deployment and System Configuration: This domain covers initial FortiGate setup, logging configuration and troubleshooting, FGCP HA cluster configuration, resource and connectivity diagnostics, FortiGate cloud deployments (CNF and VM), and FortiSASE administration with user onboarding.
Topic 4	• Content Inspection: This domain addresses inspecting encrypted traffic using certificates, understanding inspection modes and web filtering, configuring application control, deploying antivirus scanning modes, and implementing IPS for threat protection.

Topic 5	• Firewall Policies and Authentication: This domain focuses on creating firewall policies, configuring SNAT and DNAT for address translation, implementing various authentication methods, and deploying FSSO for user identification.

Actual4Dumps is a website that provide the counseling courses for IT professionals to participate in Fortinet certification NSE4_FGT_AD-7.6 exam and help them get the Fortinet NSE4_FGT_AD-7.6 certification. The courses of Actual4Dumps is developed by experienced experts' extensive experience and expertise and the quality is very good and have a very fast update rate. Besides, exercises we provide are very close to the real exam questions, almost the same. When you select Actual4Dumps, you are sure to 100% pass your first time to participate in the difficult and critical Fortinet Certification NSE4_FGT_AD-7.6 Exam.

Fortinet NSE 4 - FortiOS 7.6 Administrator Sample Questions (Q38-Q43):

NEW QUESTION # 38
An administrator configured a FortiGate device to act as a collector for agentless polling mode.
What must the administrator add to the FortiGate device to retrieve AD user group information?

- A. RADIUS server
- B. TACACS server
- C. LDAP server
- D. Keycloak server

Answer: C

Explanation:
In agentless polling mode, FortiGate directly queries Active Directory to obtain user and group information. To do this, the administrator must configure an LDAP server on the FortiGate, which allows it to retrieve user group membership details from AD.

NEW QUESTION # 39
An administrator notices that some users are unable to establish SSL VPN connections, while others can connect without any issues.
What should the administrator check first?

- A. Ensure that user traffic is hitting the firewall policy.
- B. Ensure that the affected users are using the correct port number.
- C. Ensure that the HTTPS service is enabled on SSL VPN tunnel interface
- D. Ensure that forced tunneling is enabled to reroute all traffic through the SSL VPN
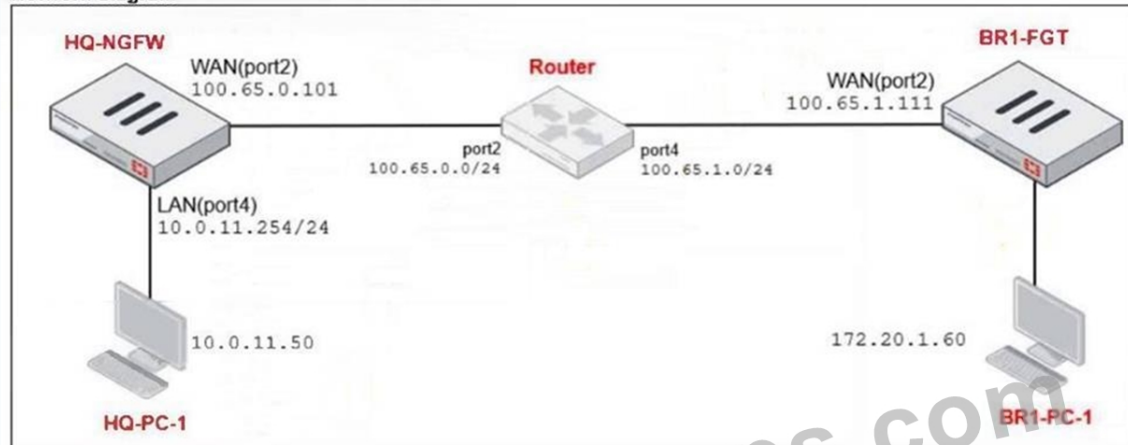

Answer: A

Explanation:
If user traffic is not matching the appropriate firewall policy that permits SSL VPN, users will be unable to establish connections, making this the first aspect to verify.

NEW QUESTION # 40
Refer to the exhibits. The exhibits show a diagram of a FortiGate device connected to the network, as well as the IP pool configuration and firewall policy objects.

The WAN (port2) interface has the IP address 100.65.0.101/24. The LAN (port4) interface has the IP address 10.0.11.254/24.
Which IP address will be used to source NAT (SNAT) the traffic, if the user on HQ-PC-1 (10.0.11.50) pings the IP address of
BR-FGT (100.65.1.111)

- A. 100.65.0.101
- B. 100.65.0.49
- C. 100.65.0.149
- D. 100.65.0.99

Answer: D

Explanation:
The ping traffic policy uses the IP pool named SNAT-Remote1, which has the external IP range
100.65.0.99. Therefore, traffic matching this policy (ping from HQ-PC-1 to BR1-FGT) will use
100.65.0.99 for source NAT.

NEW QUESTION # 41
FortiGate is integrated with FortiAnalyzer and FortiManager.
When creating a firewall policy, which attribute must an administrator include to enhance functionality and enable log recording on
FortiAnalyzer and FortiManager?

- A. Universally Unique Identifier
- B. Log ID
- C. Sequence ID
- D. Policy ID

Answer: A

Explanation:

When creating firewall objects or policies, a UUID attribute is added so that logs can record these UUIDs and improve functionality when integrating with FortiManager or FortiAnalyzer.

The exhibits show a diagram of a FortiGate device connected to the network, VIP configuration, firewall policy, and the sniffer CLI output on the FortiGate device.

The WAN (port1) interface has the IP address 10.200.1.1/24.

The LAN (port3) interface has the IP address 10.0.1.254/24.

The webserver host (10.0.1.10) must use its VIP external IP address as the source NAT (SNAT) when it pings remote server (10.200.3.1).

Which two statements are valid to achieve this goal? (Choose two.)

- A. Enable NAT on the Allow_access firewall policy.
- B. Create a new firewall policy before Internet_Access for the webserver and apply the IP pool.
- C. Disable port forwarding on the VIP object.
- D. Disable NAT on the Internet_Access firewall policy.

Answer: B,C

Explanation:

The current VIP is configured with port forwarding, so it only applies to TCP/80 traffic. To use the VIP's external address (10.200.1.200) as the source for any outbound sessions (such as ICMP ping), the VIP must be a full static 1-to-1 NAT, which requires disabling port forwarding.

You then need a dedicated firewall policy for the webserver that is placed before the generic Internet_Access policy and that uses an IP pool with 10.200.1.200. Traffic from 10.0.1.10 will match this policy first and be SNATed to 10.200.1.200, so the remote server 10.200.3.1 sees the VIP external IP as the source.
