Our UiPath-ADPv1 study materials are very popular in the international market and enjoy wide praise by the people in and outside the circle. We have shaped our UiPath-ADPv1 exam braindumps into a famous and top-ranking brand and we enjoy well-deserved reputation among the clients. Our UiPath-ADPv1 Training Questions boost many outstanding and superior advantages which other same kinds of products don't have. You won't regret if you buy them!

## UiPath UiPath-ADPv1 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Debugging and Testing: This section is about utilizing logging and debugging tools and adopting unit testing and test automation strategies.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• UiPath Studio Fundamentals: In this section, the focus is given to the understanding of Robotic Process Automation (RPA) concepts; it covers UiPath Studio and its components, Working with the UiPath user interface, project creation, management, and version control.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• UiPath Activities: In this section, the discussion is related to various UiPath activities for UI interaction, data manipulation, control flow, and more.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• Design and Development: This section covers designing workflows using sequences, flowcharts, and state machines, building reusable components with libraries, exception handling and debugging techniques, etc.</li></ul>

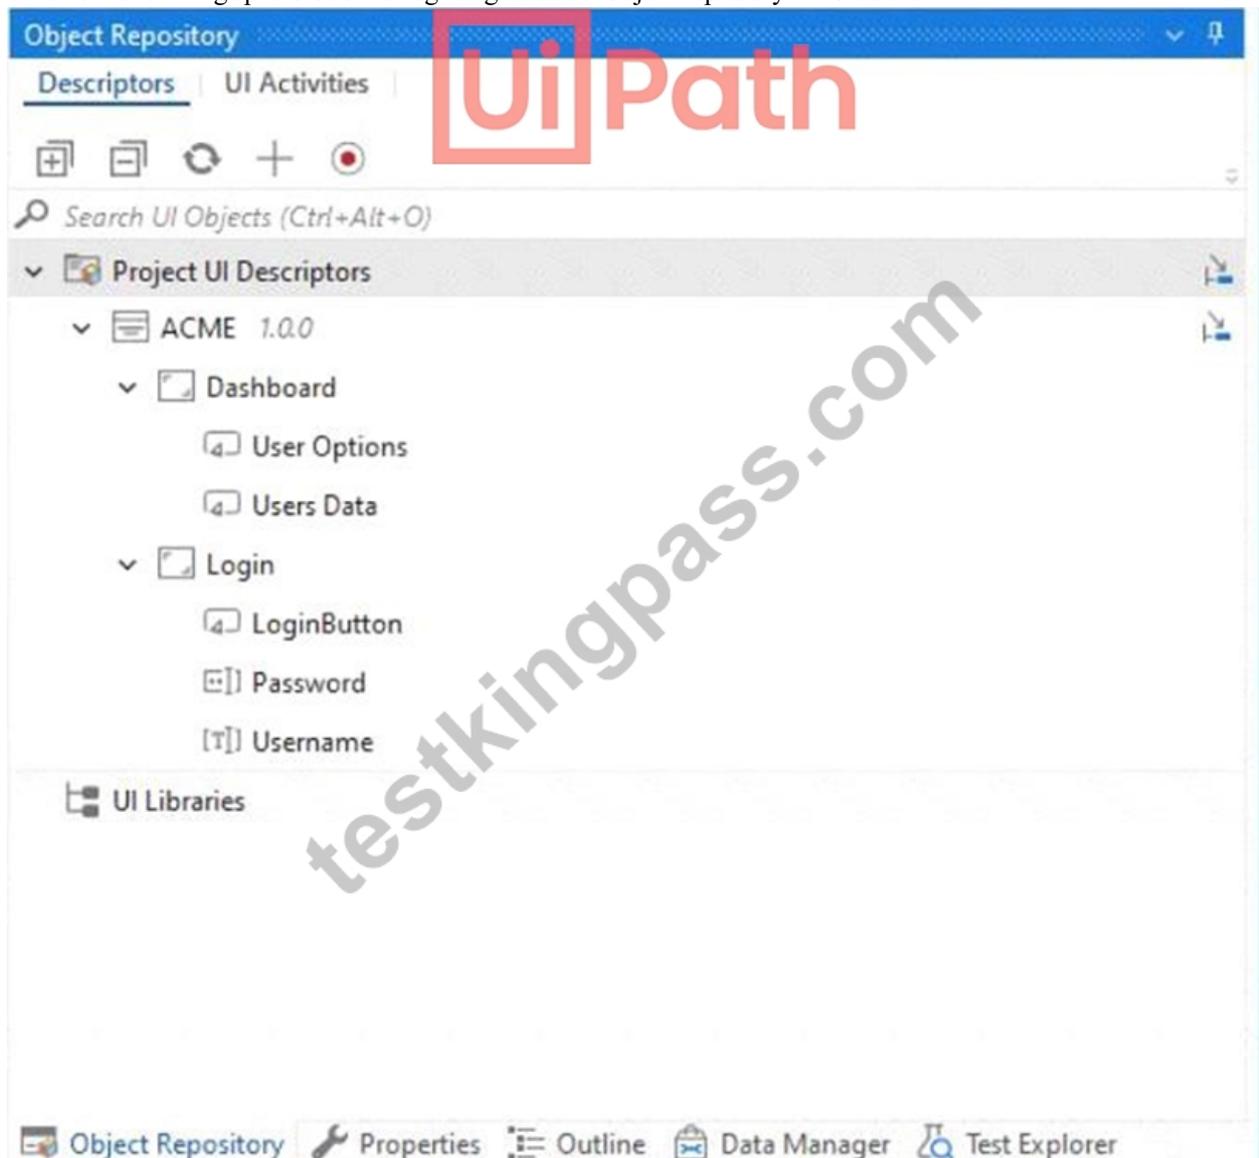

## Valid UiPath UiPath-ADPv1 Questions: 100% Authentic [2026]

TestkingPass has built customizable UiPath UiPath-ADPv1 practice exams (desktop software & web-based) for our customers. Users can customize the time and UiPath-ADPv1 questions of UiPath UiPath-ADPv1 Practice Tests according to their needs. You can give more than one test and track the progress of your previous attempts to improve your marks on the next try.

### UiPath (ADPv1) Automation Developer Professional Sample Questions (Q151-Q156):

#### NEW QUESTION # 151

Which of the following options is correct regarding the below Object Repository tree structure?

- A. One Application  
Two Screens  
Five UI Elements
- B. One Screen  
Two Applications  
Two UI Elements
- C. One Application

- Two UI Elements
- Five Screens
- D. One Screen
- Two Applications
- Five UI Elements

**Answer: A**

Explanation:

Based on the provided screenshot of the Object Repository tree structure in UiPath, the correct hierarchy and count of elements are as follows:

There is one Application, which is "ACME 1.0.0".

Within this application, there are two Screens: "Dashboard" and "Login".

Under the "Dashboard" screen, there are three UI Elements: "User Options", "Users Data".

Under the "Login" screen, there are two UI Elements: "LoginButton", "Password", "Username".

Therefore, the correct option regarding the tree structure displayed would be:

C: One Application Two Screens Five UI Elements

This option correctly identifies one application (ACME 1.0.0), two screens (Dashboard, Login), and five UI elements (User Options, Users Data, LoginButton, Password, Username).

## NEW QUESTION # 152

Which of the following examples accurately demonstrates the correct usage of AI Computer Vision features in a UiPath project?

- A. Applying AI Computer Vision to perform sentiment analysis on a provided text string and displaying the result.
- **B. Employing AI Computer Vision to identify and interact with UI elements in a remote desktop application with low quality or scaling issues.**
- C. Using AI Computer Vision to extract plain text from a scanned PDF document and store the output in a string variable.
- D. Utilizing AI Computer Vision to train a custom machine learning model to recognize specific patterns in data.

**Answer: B**

Explanation:

AI Computer Vision is a feature of UiPath that enables the automation of remote applications or desktops, such as Citrix Virtual Apps, Windows Remote Desktop, or VMware Horizon, by using native selectors. Native selectors are expressions that identify UI elements reliably and accurately, without relying on OCR or image recognition activities<sup>1</sup>. AI Computer Vision uses a mix of AI, OCR, text fuzzy-matching, and an anchoring system to visually locate elements on the screen and interact with them via UiPath Robots, simulating human interaction<sup>2</sup>. AI Computer Vision is especially useful for scenarios where the UI elements have low quality or scaling issues, which make them difficult to recognize with traditional methods<sup>3</sup>.

Option A is an accurate example of using AI Computer Vision features in a UiPath project, because it involves identifying and interacting with UI elements in a remote desktop application, which is one of the main use cases of AI Computer Vision. By using the Computer Vision activities, such as CV Screen Scope, CV Click, CV Get Text, etc., you can automate tasks in a remote desktop application without using selectors, OCR, or image recognition activities<sup>4</sup>.

The other options are not accurate examples of using AI Computer Vision features in a UiPath project, because they involve tasks that are not related to the automation of remote applications or desktops, or that do not use the Computer Vision activities. For example:

Option B involves training a custom machine learning model, which is not a feature of AI Computer Vision, but of the UiPath AI Fabric, a platform that enables you to deploy, consume, and improve machine learning models in UiPath.

Option C involves extracting plain text from a scanned PDF document, which is not a feature of AI Computer Vision, but of the UiPath Document Understanding, a framework that enables you to classify, extract, and validate data from various types of documents.

Option D involves performing sentiment analysis on a text string, which is not a feature of AI Computer Vision, but of the UiPath Text Analysis, a set of activities that enable you to analyze the sentiment, key phrases, and language of a text using pre-trained machine learning models.

### NEW QUESTION # 153

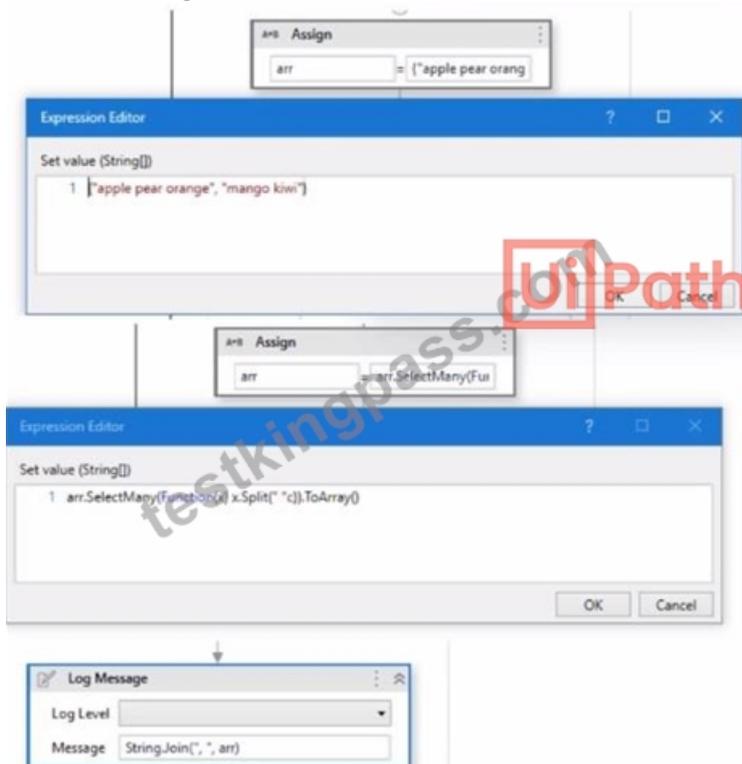

What is the purpose of the Interval filter in the Orchestrator's Monitoring page?

- A. It allows you to choose between background and foreground processes for the displayed data.
- **B. It allows you to control the granularity of the displayed data and check the health of your system in either the last day or the last hour.**
- C. It allows you to allocate licenses per machine for the displayed data.
- D. It enables you to sort the displayed data based on job priorities.

**Answer: B**

### NEW QUESTION # 154

Given the following workflow:

What will be the output of the Log Message activity?

- A. "apple pear orange", "mango kiwi"
- **B. apple, pear, orange, mango, kiwi**
- C. apple pear orange, mango kiwi
- D. apple, pear, orange

**Answer: B**

### NEW QUESTION # 155

How does UiPath Integration Service benefit automation developers?

- A. By substituting the requirement for API automation with UI automation capabilities, delivering a more manageable and user-friendly approach, allowing users to streamline their processes efficiently and effectively facilitating a more rapid integration process.
- B. By enabling developers to create custom UI elements for applications without using APIs.
- C. By offering a comprehensive, unified platform dedicated solely to UI automation, enabling seamless integration with third-party applications.
- **D. By standardizing authorization and authentication, managing API connections, and enabling faster integration into SaaS platforms.**

**Answer: D**

#### Explanation:

UiPath Integration Service is a feature of UiPath Automation Cloud that allows you to connect to various external applications and systems using predefined connectors. A connector is a component that provides the logic and interface for interacting with a specific application or system. A connection is an instance of a connector that is configured with the credentials and parameters required to access the application or system.

UiPath Integration Service benefits automation developers by standardizing authorization and authentication, managing API connections, and enabling faster integration into SaaS platforms. By using UiPath Integration Service, automation developers can: Use a consistent and secure way of authenticating and authorizing access to different applications and systems, such as OAuth 2.0, API keys, or basic authentication.

Manage and reuse connections across multiple automation projects, and share them with other developers using UiPath Orchestrator folders and permissions.

Integrate with popular SaaS platforms, such as Microsoft Outlook 365, Salesforce, Google Sheets, and more, using the built-in connectors and activities that are available in UiPath Studio and other products.

Trigger automations based on events or actions that occur in the external applications or systems, such as receiving an email, creating a record, or updating a spreadsheet.

Build custom connectors for any system integration using the Connector Builder, which allows you to create and publish connectors based on third-party APIs.

The correct answer is B. By standardizing authorization and authentication, managing API connections, and enabling faster integration into SaaS platforms. This statement accurately describes how UiPath Integration Service benefits automation developers.

The other options are not correct statements. Option A is incorrect, because UiPath Integration Service does not substitute the requirement for API automation with UI automation capabilities, but rather combines them and allows both capabilities to be centrally accessed within the same integration design environment. Option C is incorrect, because UiPath Integration Service does not offer a comprehensive, unified platform dedicated solely to UI automation, but rather a component of the UiPath Platform that makes the automation of third-party applications easier by using both UI and API automation. Option D is incorrect, because UiPath Integration Service does not enable developers to create custom UI elements for applications without using APIs, but rather to create custom connectors for applications using APIs.

#### NEW QUESTION # 156

.....

Our UiPath-ADPv1 study tool boost three versions for you to choose and they include PDF version, PC version and APP online version. Each version is suitable for different situation and equipment and you can choose the most convenient method to learn our UiPath-ADPv1 test torrent. For example, APP online version is printable and boosts instant access to download. You can study the UiPath (ADPv1) Automation Developer Professional guide torrent at any time and any place. We provide 365-days free update and free demo available. The PC version of UiPath-ADPv1 study tool can simulate the real exam's scenarios, is stalled on the Windows operating system and runs on the Java environment. You can use it any time to test your own exam stimulation tests scores and whether you have mastered our UiPath-ADPv1 Test Torrent or not. It boosts your confidence for real exam and will help you remember the exam questions and answers that you will take part in. You may analyze the merits of each version carefully before you purchase our UiPath (ADPv1) Automation Developer Professional guide torrent and choose the best version.
