The CCME certification demonstrates that an IT professional has the ability to design, implement and manage complex Maestro environments in a highly secure and efficient manner.

CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q32-Q37):

NEW QUESTION # 32
What is the purpose of Management ports located on the Rear Panel of the Orchestrator MHO-140?

- A. Additional ports used as uplinks
- B. 1Gbps connectivity for Security Groups
- C. Reserved for internal purposes. Not in use.

- D. Out-of-band interfaces for access to Orchestrator itself

Answer: D

Explanation:
The Management ports located on the Rear Panel of the Orchestrator MHO-140 are out-of-band interfaces that provide access to the Orchestrator itself for configuration and management purposes. They are not used for traffic distribution or connectivity to the Security Groups or the external networks. They are 1Gbps RJ-45 ports that can be connected to a switch or a router.

NEW QUESTION # 33
Maestro allows running commands globally in Expert mode by using global prefixes, such as:

- A. asg all
- B. g_all
- C. global
- D. all

Answer: B

Explanation:
Explanation
The g_all prefix is used to run commands globally in Expert mode on all Security Group Members of the current Security Group.
For example, g_all cpstop will stop the Check Point services on all SGMs. The other prefixes are not valid for global commands in Expert mode.

NEW QUESTION # 34
HealthCheck Point _____

- A. can be used to let you visualize the Firewall topology for the SG and view live statistics, which includes throughput, problem notes, and CPU utilization.
- B. is a self-updatable suite of tools for SGMs with the capability to assess the health of the system, visualize the Firewall topology, provide a timeline of critical and informative events that might have occurred in a production system.
- C. is a self-updatable suite of tools for MHOs with the capability to assess the health of the system and provide a timeline of critical and informative events that might have occurred in a production system.
- D. performs a system health check and is meant to replace both a CPInfo and the health check script.

Answer: B

Explanation:
HealthCheck Point (HCP) is a tool that can perform various tests and checks on the system components of the Security Group Modules (SGMs), such as hardware, software, network, clock, ARP, and more. It can also display the performance statistics of the SGMs, such as throughput, packet rate, CPU utilization, memory usage, and more. Additionally, HCP can provide a graphical representation of the Firewall topology for the Security Group, showing the connections and statuses of the SGMs and the Orchestrators. Furthermore, HCP can generate a report of the critical and informative events that occurred on the system, such as configuration changes, errors, warnings, and alerts. HCP can help identify and troubleshoot any issues or errors that may affect the system functionality or performance.

NEW QUESTION # 35

Common Layer 1 issues include

- A. Distribution
- B. Loose or bad cables
- C. Routing
- D. MAC addresses

Answer: B

NEW QUESTION # 36

When working with Maestro, what is the difference between using Clish and gClish?

- A. Clish commands are for testing purposes only and cannot be saved, gClish commands apply to all SG members, by default.
- B. Clish commands apply to all UP SG members, by default. gClish commands apply to all SG members, by default.
- C. Clish commands are run on the SG members. gClish commands are run on the MHO and applied to all connected SG members in a specified group.
- D. Clish commands apply only to a specific SG member. gClish commands apply to all UP SG members, by default.

Answer: C
