JN0-481指南 - JN0-481熱門認證

我們NewDumps Juniper的JN0-481考試學習指南可以成為你職業生涯中的燈塔，因為它包含了一切需要通過的JN0-481考試，選擇我們NewDumps，可以幫助你通過考試，這是個絕對明智的決定，因為它可以讓你從那些可怕的研究中走出來，NewDumps就是你的幫手，你可以得到雙倍的結果，只需要付出一半的努力。

Juniper JN0-481 考試大綱：

主題	簡介
主題 1	<ul style="list-style-type: none">Blueprint Operations: Covers day-to-day blueprint management including making and reverting changes, querying, virtual networks, Time Voyager, anomaly detection, property sets, configlets, and configuration types.
主題 2	<ul style="list-style-type: none">Data Center Multitenancy: Covers multi-tenant network management through routing zones, VRFs, virtual networks, connectivity templates, security policies, VMware integration, and Data Center Interconnect.
主題 3	<ul style="list-style-type: none">Apstra Design Phase: Covers pre-deployment planning elements such as reference designs, logical devices, device profiles, rack types, interface maps, and templates, including their configuration and troubleshooting.

主題 4	<ul style="list-style-type: none"> • Apstra Build and Deploy Phases: Covers fabric deployment tasks including agent installation, cable mapping, device states, deploy modes, and Blueprint UI usage, along with related monitoring and troubleshooting.
主題 5	<ul style="list-style-type: none"> • Data Center Architectures (IP Fabrics, EVPN-VXLAN): Covers spine-leaf topology design, ECMP load balancing, and underlay • overlay routing, along with EVPN and VXLAN concepts including route types, bridge domains, VNI-to-VLAN mapping, and VTEP functions.
主題 6	<ul style="list-style-type: none"> • Intent-Based Analytics: Covers Apstra's analytics tools including Graph Explorer, graph queries, and intent-based analytics probes for network monitoring, validation, and troubleshooting.

最新的 JNCIS-DC JN0-481 免費考試真題 (Q27-Q32):

問題 #27

What are two available Juniper Apstra template types? (Choose two.)

- A. compressed
- B. rack-based
- C. device-based
- D. collapsed

答案: B,C

解題說明:

Juniper Apstra provides two main template types:

- Rack-based templates, which define the layout and connectivity of racks in the data center fabric.
- Device-based templates, which define specific device roles and their configurations.

問題 #28

Which three multihoming mechanisms are supported in the Juniper Apstra rack design? (Choose three.)

- A. virtual chassis
- B. vPC
- C. MLAG
- D. ESI
- E. VRRP

答案: B,C,D

解題說明:

In Juniper Apstra rack designs, the supported multihoming mechanisms are:

- vPC (Virtual Port Channel) for multihoming with certain vendor devices.
- ESI (Ethernet Segment Identifier), part of EVPN multihoming.
- MLAG (Multi-Chassis Link Aggregation Group) for providing multihoming and redundancy.

問題 #29

You are creating a new security policy using Juniper Apstra.

Referring to the exhibit, which application point should you select to allow or deny traffic to or from a particular VRF?

Create Security Policy

Common Parameters

Name*

Description

Enabled

Tags

Application Points

Source Point Type

- Internal Endpoint
- External Endpoint
- External Endpoint Group
- Internal Endpoint Group
- Virtual Network
- Routing Zone

Destination Point Type

- Internal Endpoint
- External Endpoint
- External Endpoint Group
- Internal Endpoint Group
- Virtual Network
- Routing Zone

Source Point

Destination Point

Rules

There are no rules added

Create Another?

- A. Internal Endpoint
- B. Virtual Network
- C. Routing Zone
- D. External Endpoint

答案： C

解題說明：

In Juniper Apstra, a Routing Zone corresponds to a VRF. If you want to create a security policy that controls traffic to or from a particular VRF, you must select Routing Zone as the application point. This ensures the policy is applied at the VRF level rather than to specific endpoints or virtual networks.

問題 #30

You have a configuration deviation in the Juniper Apstra dashboard. What does this anomaly indicate in this scenario?

- A. A device's configuration has been updated by the server.
- B. A device's configuration has been changed using a method outside of Apstra.
- C. A device is ready to be configured by the system.
- D. A device cannot support a configuration command sent by the system.

答案： B

解題說明：

A configuration deviation (also called a configuration anomaly) in Apstra indicates that the device's running configuration differs from Apstra's intended (golden) configuration for that node. In day-to-day operations, this most commonly occurs when an operator makes a change outside of Apstra's control, such as entering commands directly on the device CLI (for example, on a Junos v24.4

switch), using another automation system, or applying an out-of-band configuration method.

Apstra continuously compares the device's operational configuration against what it expects based on blueprint intent. When it detects drift, it raises a deviation anomaly so operators can decide how to restore compliance. Typical remediations are either (1) remove/revert the out-of-band change so the device matches intent again, or (2) explicitly acknowledge the change in Apstra (for example, via an accept/suppress workflow, depending on the exact UI action and version), so the deviation is no longer treated as unexpected.

While it is also possible for a deviation to be triggered by a device not accepting a rendered command (capability mismatch), the question asks what the anomaly indicates in this scenario; the primary meaning of "configuration deviation" is configuration changed outside of Apstra and therefore the network is no longer aligned with the intended state. That corresponds to option C.

問題 #31

When viewing the devices in the Managed Devices table, you see that some devices are listed in the OOS-READY state. What does this state mean for the device?

- A. The device is ready to have its NOS upgraded.
- B. The device has been taken out of service for maintenance.
- C. The device is awaiting the installation of a license.
- **D. The device has an agent installed and is ready to be assigned into a blueprint.**

答案: D

解題說明:

In Juniper Apstra, a device in the OOS-READY (Out-Of-Service READY) state indicates that the Apstra agent has been installed and the device is prepared to be assigned into a blueprint, but it has not yet been brought into active service within the fabric.

問題 #32

.....

在這個人才濟濟的社會，人們不斷提高自己的知識想達到更高的水準，但是國家對尖端的IT人員需求量還在不斷擴大，國際上更是如此。所以很多人想通過Juniper的JN0-481考試認證，但想通過並非易事。其實只要你們選擇一個好的培訓資料完全通過也不是不可能，我們NewDumps Juniper的JN0-481考試認證培訓資料完全擁有這個能力幫助你們通過認證，NewDumps網站的培訓資料是通過許多使用過的考生實踐證明了的，而且在國際上一直遙遙領先，如果你要通過Juniper的JN0-481考試認證，就將NewDumps Juniper的JN0-481考試認證培訓資料加入購物車吧！
