

2026 Latest CTFL-AcT Dumps Collection | ISTQB Foundation Level - Acceptance Testing 100% Free Latest Braindumps Ppt

2026 Latest Itexamguide CTFL-AcT PDF Dumps and CTFL-AcT Exam Engine Free Share: <https://drive.google.com/open?id=1NQ9Qt-MFbVK-K98PKONoZx48BykWrajA>

Our ISQI CTFL-AcT demo products hold the demonstration for our actual products, demos are offered at no cost only for raising your confidence level. Procure the quality of our product in advance, unsighted featured becomes reveal with our CTFL-AcT Demo products. Free Private Cloud Monitoring and Operations with demos respond to all kind of worries that customers have in their mind while going for actual purchase.

One of the main objectives of the ISQI CTFL-AcT Exam is to ensure that candidates have a solid understanding of acceptance testing and are able to apply this knowledge in real-world scenarios. CTFL-AcT exam covers a range of topics such as the principles of acceptance testing, test planning and preparation, test execution and evaluation, and defect management. Additionally, the exam also covers the various tools and techniques that are commonly used in acceptance testing, including test automation, exploratory testing, and risk-based testing.

2026 Efficient CTFL-AcT – 100% Free Dumps Collection | Latest Braindumps CTFL-AcT Ppt

With the increasing marketization, the product experience marketing has been praised by the consumer market and the industry. Attract users interested in product marketing to know just the first step, the most important is to be designed to allow the user to try before buying the CTFL-AcT study materials, so we provide free pre-sale experience to help users to better understand our products. The user only needs to submit his E-mail address and apply for free trial online, and our system will soon send free demonstration research materials of CTFL-AcT Study Materials to download.

ISQI ISTQB Foundation Level - Acceptance Testing Sample Questions (Q77-Q82):

NEW QUESTION # 77

Which of the following activities is most likely performed by the business analyst as part of defect analysis?

- A. Analyze the function that failed step by step to identify the cause of the defect.
- B. Assess the impact of corrective actions on other parts of the system's implementation.
- C. Check, whether other paths in the business process model perform as intended.
- D. Identify the requirements / user stories that are not satisfied.

Answer: D

NEW QUESTION # 78

Which one of the following statements regarding the graphical representation of business processes is true?

- A. Business processes should be described graphically using the DMN standard and completed with decision tables.
- B. Graphical representations of business processes must describe the complete workflow in detail, including alternative and error scenarios.
- C. For acceptance testing, graphical business process models should focus on the user workflows to be tested.
- D. Using decision tables in BPMN allows defining test conditions corresponding to the business rules under test.

Answer: C

Explanation:

Graphical representations of business processes, particularly using BPMN (Business Process Model and Notation), serve as a bridge between business stakeholders and testers. These models help visualize the steps a user or system goes through, making it easier to derive test cases.

Option C is correct because acceptance testing aims to validate the system's behavior from the user or business perspective. Therefore, focusing on key user workflows (rather than exhaustive technical or exception paths) aligns with the purpose of acceptance testing: to ensure that the system meets agreed-upon business requirements.

Option A is incorrect because decision tables are part of DMN (Decision Model and Notation), not BPMN.

Option B is too rigid - not all alternative/error paths must be modeled in early acceptance testing unless they are critical to business rules.

Option D misapplies the standards - DMN is used to model business rules, not the complete business process.

C). For acceptance testing, graphical business process models should focus on the user workflows to be tested.

NEW QUESTION # 79

In Agile an exploratory test session is conducted. Which one of the following concepts applies BEST?

- A. timeboxing Answer
- B. refactoring
- C. planning poker
- D. pair programming

Answer: A

Explanation:

Exploratory testing in Agile projects is a structured but unscripted testing approach where learning, test design, and execution occur simultaneously. Timeboxing is a key practice in managing exploratory testing sessions effectively.

A timebox is a fixed duration (e.g., 60-90 minutes) within which testers explore specific functionalities or risks. It encourages focus, documentation of findings, and prevents overrun or testing fatigue. After the session, testers often hold debriefs to review findings and determine next steps.

Option D is correct because timeboxing is essential for exploratory testing management.

Incorrect options:

A). Pair programming relates to development, not testing.

B). Refactoring is a development technique focused on improving code without changing behavior.

C). Planning poker is used in Agile for effort estimation, not directly related to exploratory testing.

Exact Reference - ISTQB CTFL Acceptance Testing Syllabus (Section 3.1):

"Exploratory testing is often conducted in time-boxed sessions, with a charter guiding the scope of the session."

NEW QUESTION # 80

In a project to develop an online booking system, the team decided to strengthen collaborative work between the business analyst and the testers working on the project. Several concrete joint activities have been identified.

- A. Review of risk to prioritize acceptance test
- B. Definition of Beta Testing sessions
- C. Business needs assessment
- D. Development of acceptance criteria for user stories

Answer: D

Explanation:

Collaboration between business analysts and testers is critical in Agile and acceptance testing environments.

One of the most effective areas of cooperation is the joint development and review of acceptance criteria for user stories. This ensures that criteria are testable, clearly defined, and aligned with stakeholder expectations.

Option B is correct because creating acceptance criteria is where both business analysts (who understand the business needs) and testers (who ensure testability and clarity) contribute effectively.

Other options:

A (Business needs assessment) is typically a responsibility of business analysts, not a joint activity with testers.

C (Review of risk to prioritize acceptance tests) is a valuable activity but comes after criteria are defined.

While it can be collaborative, it's more specific to test planning.

D (Definition of Beta Testing sessions) is less relevant to ongoing collaborative work between testers and BAs - this involves users and release planning.

B). Development of acceptance criteria for user stories

NEW QUESTION # 81

Given the following attributes:

i.commercializability

ii.functional suitability

iii.viability

iv.reliability

v.security

vi.cognitive ability

vii.maintainability

Which one of the following answers contains quality attributes that are MOST relevant for acceptance testing?

- A. ii, v and vi
- **B. i, ii and vi**
- C. ii, v and vii
- D. iii, iv and v

Answer: B

NEW QUESTION # 82
