You have a package named Package1 that has the versions shown in the following table.

You need to perform a build of Project1. Which version of Package1 will be used?

- A. 2.3.1
- B. 1.0.3
- C. 2.0.0
- D. 1.4.0

**Answer: A**

#### NEW QUESTION # 306

You have a GitHub repository that is integrated with Azure Boards. Azure Boards has a work item that has the number 715.

You need to ensure that when you commit source code in GitHub, the work item is updated automatically.

What should you include in the commit comments?

- A. the URL of the work item
- B. @714
- C. =715
- D. AB#715

**Answer: C**

#### NEW QUESTION # 307

You need to configure a cloud service to store the secrets required by the mobile applications to call the share.

What should you include in the solution? To answer, select the appropriate options in the answer area, NOTE:

Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

Every request made against a storage service must be authorized, unless the request is for a blob or container resource that has been made available for public or signed access. One option for authorizing a request is by using Shared Key.

Scenario: The mobile applications must be able to call the share pricing service of the existing retirement fund management system. Until the system is upgraded, the service will only support basic authentication over HTTPS.

The investment planning applications suite will include one multi-tier web application and two iOS mobile application. One mobile application will be used by employees; the other will be used by customers.
