### Veeam Certified Engineer v12 Sample Questions (Q44-Q49):

#### NEW QUESTION # 44

A customer has an Amazon Simple Storage Service compatible object storage repository in their secondary site. Backup jobs on the main site are configured with weekly full backups to a hardened repository with XFS and a retention of 14 days. The requirement is to keep only backups older than 14 days but no more than 30 days in the Amazon S3 repository. What must the systems engineer do to meet these requirements?

- A. Set the Amazon S3 repository as the Capacity Tier of the Scale-out Backup Repository, with Move mode set to 30 days.
- B. Create a backup copy job (Periodic mode) to the Amazon S3 repository with 14 days retention, scheduled daily.
- C. Create a backup copy job (Immediate mode) to the Amazon S3 repository with 30 days retention, scheduled every 2 weeks.
- **D. Increase the retention to 30 days and set the Amazon S3 repository as the Capacity Tier of the Scale-out Backup Repository, with Move mode set to 14 days.**

**Answer: D**

Explanation:

Using move mode at 14 days with 30 day retention means backups are removed after 30 days still, but only 'move' to the S3 after 14 days.

#### NEW QUESTION # 45

What describes an RPO?

- A. To clarify how many restore points need to be recovered at the same time
- **B. To confirm the data loss tolerance of a Business Unit or Organization**
- C. To determine the maximum length of time a workload or application can be down

- D. To confirm at what point a backup should be migrated to Object Storage

**Answer: B**

Explanation:

Recovery Point Objective (RPO) refers to the maximum acceptable amount of data loss measured in time. It is essentially the age of the files that must be recovered from backup storage for normal operations to resume after a failure or disaster. In other words, it defines the data loss tolerance of a business unit or organization. If an RPO is set to one hour, the system must back up at least every hour to meet the RPO.
