One of the key reasons for the importance of the GARP SCR Certification Exam is the increasing recognition of the financial risks associated with climate change. As the world becomes more aware of the potential impacts of climate change, investors and regulators are increasingly demanding that financial institutions take a more proactive approach to managing these risks. The GARP SCR Certification Exam provides professionals with the tools they need to meet these demands and ensure that their organizations are well-prepared for the challenges ahead.

## GARP Sustainability and Climate Risk Sample Questions (Q32-Q37):

### NEW QUESTION # 32

An international chemical manufacturing company produces a variety of consumer and industrial goods and services. To progress company alignment with the SDGs, the sustainability director suggests incorporating nature-based strategies. Which strategy best represents a nature-based solution for the company?

- A. Support the growth of wetlands around some facilities to help absorb potential pollution runoff.
- B. Reduce trace amounts of toxic chemicals in single-use plastic to protect sea life.
- C. Purchase more fuel-efficient cars for the company vehicle fleet to reduce GHG emissions.
- D. Develop materials that enable vulnerable coastal communities to affordably install sea walls.

**Answer: A**

**NEW QUESTION # 33**

To assess potential business implications of climate change, a large manufacturing company implements scenario analysis for the first time. The company hires a consultant to help incorporate climate-related considerations into a model of the company's potential business outcomes.

What useful scenario analysis information should the consultant make the company aware of?

- A. Physical scenarios portray a pathway of emissions to deliver a given limit to warming.
- **B. Transition and physical risk considerations are complementary in scenario analysis.**
- C. Transition and physical climate scenarios assess historical vulnerabilities to climate change.
- D. Physical scenarios include material consequences of new climate policies on short-term energy supplies.

**Answer: B**

**NEW QUESTION # 34**

An ESG scorecard for sovereign debt issuers has the following information:

Country 1 No carbon policy and high corruption risk

Country 2 High-level carbon policy and low corruption risk

Country 3 Detailed carbon policy and low corruption risk

Based only on this information, the country with the lowest ESG risk is:

- **A. Country 3**
- B. Country 1.
- C. Country 2

**Answer: A**

**NEW QUESTION # 35**

In response to consumer demand for eco-friendly products, a global personal care company develops a net-zero transition plan. The company sustainability team recommends an appropriate carbon accounting method for the plan. Which of the following country-level emission accounting methods is most likely recommended and why?

- A. Consumption-based accounting to specifically measure emissions from supply chain imports
- B. Production-based accounting to highlight GHG emission reduction in operations
- **C. Consumption-based accounting to calculate the carbon footprint of the entire product life cycle**
- D. Production-based accounting to measure GHG emissions regardless of location

**Answer: C**

**NEW QUESTION # 36**

A multi-industry consortium convenes risk managers from across the globe to discuss climate impacts on global trade and economic growth. A climate modeler leads a discussion on macro-level physical changes in the Earth's atmosphere and highlights two climatic trends that demonstrate an inverse relationship in recent decades.

What two trends does the modeler highlight?

- A. Northern and Southern hemisphere temperatures
- B. Atmospheric aerosol levels and forced variability events
- C. Atmospheric water vapor and global temperature
- **D. Radiative forcing and Arctic sea ice extent**

**Answer: D**

**NEW QUESTION # 37**
