

Plat-Dev-210認證使傳遞Salesforce Certified Omnistudio Developer更容易

此外，這些VCESoft Plat-Dev-210考試題庫的部分內容現在是免費的：<https://drive.google.com/open?id=1FHACsVjh-OGTxV32lhwKqcB8OgNnA-cH>

VCESoft的產品是為你們參加Salesforce Plat-Dev-210認證考試而準備的。VCESoft提供的培訓資料不僅包括與Salesforce Plat-Dev-210認證考試相關的資訊技術培訓資料，來鞏固專業知識，而且還有準確性很高的關於Salesforce Plat-Dev-210的認證考試的相關考試練習題和答案。可以保證你第一次參加Salesforce Plat-Dev-210的認證考試就以高分順利通過。

Salesforce Plat-Dev-210 Exam Overview:

Certification Vendor:	Salesforce
Exam Name:	Salesforce Certified OmniStudio Developer
Exam Number:	Plat-Dev-210
Exam Price:	USD 200 (retake: USD 100)
Certificate Validity Period:	2 years
Real Exam Qty:	60 - 65
Related Certifications:	Salesforce Certified Developer Salesforce Certified Administrator
Exam Duration:	105 minutes
Passing Score:	67% (670/1000)
Exam Format:	Multiple-select, Multiple-choice
Available Languages:	English
Recommended Training:	Build Guided Experiences with OmniStudio (OMS435) Prepare for Your Salesforce OmniStudio Developer Certification
Exam Registration:	Salesforce Certification Portal Kryterion Webassessor
Sample Questions:	Salesforce Plat-Dev-210 Sample Questions
Exam Way:	Online proctored or onsite testing at Kryterion / Pearson VUE centers

Pre Condition:	No mandatory prerequisites; recommended experience with OmniStudio, Salesforce platform development, and declarative tools
Official Syllabus URL:	https://trailhead.salesforce.com/credentials/omnistudio-developer

Plat-Dev-210考試 & Plat-Dev-210學習筆記

您是否在尋找可靠的學習資料來準備即將來的Plat-Dev-210考試？如果是的話，您可以嘗試VCESoft的產品和服務。我們提供最新的Salesforce Plat-Dev-210考古題是經過眾多考生和專家檢驗過的學習指南，保證成功率百分之百的考古題。對於購買Plat-Dev-210題庫產品的客戶，我們還提供一年的免費更新服務。所以，您不必擔心，Salesforce Plat-Dev-210學習指南不僅讓您更準確的了解考試的出題點，還能讓您更有範圍的學習相關知識，高效率的通過Plat-Dev-210考試。

Salesforce Plat-Dev-210 考試大綱：

主題	簡介
主題 1	Integrated Troubleshooting and Deployment: This final section measures the skills of a Support Engineer and focuses on identifying and resolving issues within Omnistudio tools. It involves diagnosing errors based on given scenarios and determining where breakdowns occur in the data flow for specific customer issues. This ensures the candidate can effectively troubleshoot, debug, and maintain solutions to ensure optimal performance and reliability.
主題 2	Flexcards: This section of the exam measures the skills of a Solution Architect and covers the ability to design and configure FlexCards based on specific business requirements. It evaluates the candidate's knowledge in selecting appropriate card styles, defining data sources and fields, and implementing user actions across different card states. Additionally, this domain tests the understanding of constructing the underlying JSON data structure that powers the FlexCards framework, ensuring that the configured cards meet both functional and technical specifications.
主題 3	Expression Sets & Decision Matrices: This section measures the skills of a Logic Designer and covers the configuration and application of Expression Sets and Decision Matrices within Omnistudio tools. It requires demonstrating an understanding of how Expression Sets evaluate conditions and how Decision Matrices use rule-based logic to determine outcomes. This knowledge is essential for automating decisions and streamlining complex business processes.
主題 4	Omniscripts: This portion of the exam measures the skills of a Business Analyst and focuses on the use of OmniScripts to create dynamic, guided user experiences. It includes comparing and contrasting various OmniScript elements and their configurations to fulfill given use cases. The section also examines the candidate's understanding of the JSON structure that supports OmniScripts, as well as the ability to select appropriate elements and properties to address functional requirements effectively.
主題 5	Integration Procedures: This section measures the skills of an Integration Architect and involves designing and configuring Integration Procedures to automate processes and integrate systems. It requires comparing and contrasting different elements and configurations within Integration Procedures to meet specific use cases. Candidates are also tested on selecting the correct elements and properties to satisfy functional requirements, ensuring seamless data flow and process automation.

最新的 Salesforce Developer Plat-Dev-210 免費考試真題 (Q42-Q47):

問題 #42

What two advantages does a DataRaptor Turbo Extract have over a standard DataRaptor Extract?

Choose 2 answers

- A. It supports complex field mappings

- B. It has better performance at runtime
- C. It is easier to configure
- D. It populates data in PDF and DocuSign format

答案: B,C

解題說明:

A DataRaptor Turbo Extract is a simplified version of a DataRaptor Extract that can retrieve data from a single object without changing the structure of the output data. It is easier to configure because it does not require defining extraction steps or JSON paths. It also has better performance at runtime because it uses a native query engine instead of a custom one

問題 #43

A developer needs to configure a calculation procedure to calculate a subtotal using two different depending on whether the input Boolean variable is Customer is set to true or false. How should a developer configure the calculation procedure to conditionally execute the correct formula?

- A. Use two separate Calculation Steps with the Conditional Step property selected: use the ISTRUE (is Customer) and NOT (ISTRUE) (is Customer) functions in the Condition syntax.
- B. Use two separate Calculation Steps with the Conditional Step property selected: compare the isCustomer variable directly to the literal true and false values in the Condition syntax.
- C. Use two separate Calculation Steps with the Conditional Step property selected: reference just the is Customer variable in the Conditional syntax (no comparison necessary)
- D. Use a single Calculation Steps with IF statement directly in the formula definition to reference the isCustomer variable and conditionally perform the appropriate calculation.

答案: A

解題說明:

Using two separate Calculation Steps with the Conditional Step property selected allows the developer to specify different formulas based on different conditions. The ISTRUE(isCustomer) and NOT(ISTRUE(isCustomer)) functions are used to evaluate the Boolean variable in the Condition syntax. The other options are either missing the Conditional Step property, using incorrect comparison operators, or using an IF statement instead of separate Calculation Steps.

問題 #44

A developer needs to use the CONTIF function to process data entered by the user in an OmniScript. The output of the function needs to be displayed to the user immediately in the current step. Based on best practice, what element should the developer use this function in?

- A. A Set Values element
- B. A Calculation Action element
- C. A formula element
- D. A Range element

答案: C

解題說明:

A formula element allows the developer to define formulas using functions and operators to manipulate data in an OmniScript. The output of the formula element can be displayed to the user immediately in the current step using a display element. The CONTIF function counts how many times a value appears in a list. A Calculation Action element executes a calculation procedure and returns the output as a JSON object. A Set Values element assigns values to variables or fields in an OmniScript. A Range element defines a range of values for a variable or field in an OmniScript. Based on best practice, a formula element is the most suitable element to use the CONTIF function in this scenario.

問題 #45

An OmniScript updates data from one Salesforce record, but when it completes, only some of the data is updated in Salesforce. A DataRaptor Load saves the data. What error could cause this behavior? Choose 2 answers

- A. The input JSON paths in the DataRaptor Load do not match the JSON from the OmniScript.

- B. The fields that are not updated are read only in Salesforce.
- C. ContextId is misspelled in the merge code that passes the RecordId to the DataRaptor
- D. In the DataRaptor Load, in the Preview tab, the Record is from the wrong record type.

答案: A,C

解題說明:

The input JSON paths In the DataRaptor Load must match the JSON from the OmniScript, otherwise the data will not be mapped correctly to the Salesforce fields. ContextId must be spelled correctly in the merge code that passes the RecordId to the DataRaptor, otherwise the DataRaptor will not be able to identify which record to update. The fields that are not updated are not necessarily read only in Salesforce, as they could be editable by other means. In the DataRaptor Load, in the Preview tab, the Record is from the wrong record type has no effect on updating data in Salesforce, as it is only used for testing purposes.

問題 #46

A developer needs to build a DataRaptor Transform to send current weather to both an OmniScript Card Layout. Which of these samples would be valid for the Expected Output JSON?

- A.

```
{
  "Current": {
    "TempF": 53.1,
    "CityState": "Baltimore, MD",
    "TempC": 12.3
  }
}
```
- B.

```
{
  "Current": {
    "TempF": 53.1,
    "CityState": "Baltimore, MD",
    "TempC": 12.3
  }
}
```
- C.

```
<root>
  <Current>
    <TempF>53.1</TempF>
    <CityState>Baltimore, MD</CityState>
    <TempC>12.3</TempC>
  </Current>
</root>
```
- D.

```
{
  "Current:TempF": 53.1,
  "Current:CityState": "Baltimore, MD",
  "Current:TempC": 12.3
}
```

答案: B

解題說明:

According to the Transform External Data Unit, the Expected Output JSON should match the Output Path of the DataRaptor Transform. In option D, the Output Path is Current:CityState, which matches the Expected Output JSON. The other options have different Output Paths that do not match the Expected Output JSON. Therefore, the correct answer is D.
