Then you are required to answer every question of the SAFe-POPM Exam Materials. And they will show the scores at the time when you finish the exam.

Scrum SAFe Product Owner/Product Manager POPM (6.0) Sample Questions (Q22-Q27):

NEW QUESTION # 22

Which role ensures that the ART has the Vision and Backlog needed to engage in PI Planning successfully?

- A. Product Management
- B. Product Owner
- C. Release Train Engineer
- D. Lean-Agile Center of Excellence

Answer: A

Explanation:

Product Management is the role that ensures that the Agile Release Train (ART) has the Vision and Backlog needed to engage in PI Planning successfully. Product Management is responsible for defining and communicating the Vision, which describes the future state of the solution and its features¹. Product Management also develops and maintains the Program Backlog, which contains the features and enablers that the ART will implement in the upcoming Program Increments (PIs)². Product Management collaborates with stakeholders, customers, architects, and other roles to discover, prioritize, and refine the backlog items and present them to the ART during PI Planning³.

NEW QUESTION # 23

What is one input to the Vision?

- A. Feature context
- B. Customer feedback
- C. Team topologies
- D. Portfolio Backlog

Answer: B

Explanation:

Explanation

One input to the Vision is customer feedback. Customer feedback is the information and opinions that customers and stakeholders provide about the solution, its features, and its value proposition¹. Customer feedback helps to validate the assumptions, test the hypotheses, and measure the satisfaction of the solution².

Customer feedback also helps to identify the needs, preferences, and expectations of the customers and stakeholders, which are essential for defining and communicating the Vision³. The Vision is a description of the future state of the solution under

development, and it reflects the problem(s) that the solution will solve and the benefits that it will deliver⁴.

NEW QUESTION # 24

What is one step when determining initial team capacity during PI Planning?

- A. Ensure Product Owner/Product Manager approval for all time-based capacity adjustments
- B. Add together all of the points from recently completed Features
- **C. Subtract one point for every team member's vacation day, public holiday, or training day**
- D. Compare final team capacity across all teams

Answer: C

Explanation:

Explanation

One step when determining initial team capacity during PI Planning is to subtract one point for every team member's vacation day, public holiday, or training day. This step helps the team to adjust their capacity based on the actual availability of each team member for the upcoming Program Increment (PI)¹. By accounting for the time-based capacity adjustments, the team can plan their work more realistically and avoid overcommitting or underdelivering².

NEW QUESTION # 25

Which role does Product Management work with to prioritize Enablers?

- A. Solution Management
- B. Product Owner
- **C. System Architect**
- D. Development Manager

Answer: C

Explanation:

Product Management works with System Architect to prioritize Enablers, which are backlog items that extend the architectural runway of the solution under development or improve the performance of the development value stream¹. System Architect provides technical guidance and enablement to the Agile Release Trains (ARTs) and helps identify and define the enablers needed to support the features and capabilities². In collaboration with System Architect, Product Management negotiates capacity allocations that balance the concentration of business and enabler features in the ART backlog³.

Some additional information that might be helpful for you are:

- * The other options (B, C, and D) are not the role that Product Management works with to prioritize Enablers, but rather roles that have different responsibilities or collaborations with Product Management.
- * Development Manager is a role that supports the Development teams in building quality solutions and fosters a culture of technical excellence and innovation⁴. Development Manager may work with Product Management to provide feedback on the feasibility and effort of the features and enablers, but not to prioritize them.
- * Product Owner is a role that represents the customer and stakeholders to the Development team and defines and accepts the work items in the Team Backlog. Product Owner may work with Product Management to align on the product vision and roadmap and to decompose the features and enablers into stories, but not to prioritize them.
- * Solution Management is a role that is responsible for defining and delivering complex solutions that require multiple ARTs and Solution Trains. Solution Management may work with Product Management to coordinate the dependencies and interfaces between the solutions and the products, but not to prioritize the enablers.

NEW QUESTION # 26

Why do Agile Teams use Iteration Goals?

- A. To align the team members and the Product Owner to a common purpose
- B. To ensure the team accomplishes the committed Stories for each Iteration
- C. To hold the team accountable to their PI Objectives
- D. To summarize the business outcomes an Agile Team intends to achieve during the PI

Answer: A

Explanation:

Iteration Goals are a high-level summary of the business and technical goals that an Agile Team agrees to accomplish in an Iteration. They are vital to coordinating an Agile Release Train (ART) as a self-organizing, self-managing team of teams¹. Iteration Goals help the team and the Product Owner to reach agreement on the business value they intend to deliver, align their work to their team PI objectives, and ground everyone on their shared purpose².
