Where there is life, there is hope. Never abandon yourself. You still have many opportunities to counterattack. If you are lack of knowledge and skills, our AZ-400 guide questions are willing to offer you some help. Actually, we are glad that our AZ-400 Study Materials are able to become you top choice. Just look at the warm feedbacks from our AZ-400 learning braindumps, we are very popular in the whole market. And our AZ-400 exam guide won't let you down.

Microsoft Designing and Implementing Microsoft DevOps Solutions Sample Questions (Q400-Q405):

NEW QUESTION # 400
You have an Azure DevOps release pipeline named Pipeline1. You plan to use Pipelinel to deploy infrastructure as code (laC) resources to Azure. You need to create templates to define which resources to deploy. Which template formats should you use?

- A. Biceponly
- B. Azure Resource Manager (ARM) and Bicep only
- C. XML only
- D. Azure Resource Manager (ARM) only
- E. Azure Resource Manager (ARM), Bicep. and XML

Answer: B

NEW QUESTION # 401
Note: This section contains one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem. You must determine whether the solution meets the stated goals.
More than one solution in the set might solve the problem. It is also possible that none of the solutions in the set solve the problem.
After you answer a question in this section, you will NOT be able to return. As a result, these questions do not appear on the Review Screen.
You have an on-premises web server named Server1.
You need to ensure that you can build .NET apps and deploy the apps to Server1 by using Azure Pipelines.
Solution: You deploy Managed DevOps Pools and select the Ubuntu Server 22.04 LTS - x64 Gen 2 image.
Does this meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION # 402
You need to recommend project metrics for dashboards in Azure DevOps.
Which chart widgets should you recommend for each metric? To answer, drag the appropriate chart widgets to the correct metrics. Each chart widget may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Reference:
https://docs.microsoft.com/en-us/azure/devops/report/dashboards/velocity-guidance?view=vsts
https://docs.microsoft.com/en-us/azure/devops/report/dashboards/cycle-time-and-lead-time?view=vsts
https://docs.microsoft.com/en-us/azure/devops/report/dashboards/configure-burndown-burnup-widgets?view=vsts

NEW QUESTION # 403
Task 1
Navigate to aex.dev.azure.com and specify the following credentials:
* UserUser1-48901628@cxamUsers.com
* Password: aFpJ2j-6M!
Use the default setting to sign up for Azure DevOps and create an Azure DevOps organization. Once the organization is created. create a private project named Project1.
You need to ensure that the maximum file size for all the Azure DevOps repositories of Project1 is 2 MB.

Answer:

Explanation:
See explanation below
Explanation:
Step 1: Access Azure DevOps
* Open your browser and navigate to https://aex.dev.azure.com.
* You will be prompted to sign in. Enter the following credentials:
* Username: UserUser1-48901628@cxamUsers.com
* Password: aFpJ2j-6M!
* Click Next or Sign in to proceed.
Note: If you see any Microsoft security challenge (like phone or email verification), follow the instructions to complete it.
Step 2: Sign Up for Azure DevOps
* After signing in, you'll see a prompt to sign up for Azure DevOps.
* Use the default settings provided by Azure DevOps for the sign-up process (region, default name, etc.).
* Click Continue or Start free with Azure DevOps.
An Azure DevOps Organization is a container for your projects and resources. Default settings are usually fine for new organizations.
Step 3: Create the Organization
* Enter a name for your organization. Azure DevOps will suggest a default name (like yourname or org- name), but you can change it if you prefer.
* Verify the region is correct.
* Click Continue to create the organization.
Your Azure DevOps organization is now created. It's the top-level container for all your projects.
Step 4: Create a Private Project Named Project1
* In your Azure DevOps portal, find the "New Project" button and click it.
* Enter the following details:
* Project Name: Project1
* Description: (optional)
* Visibility: Private
* Click Create.
A private project means that only users you add can see or access it. This is important for security and privacy.
Step 5: Enforce Maximum File Size for Repositories
By default, Azure DevOps allows files up to 100 MB to be pushed. To ensure the maximum file size for repositories in Project1 is 2 MB, you can enforce this using a pipeline validation.
Azure DevOps does not provide a direct setting for file size limits. However, you can create a pipeline to validate file size on pull requests and block changes if a file exceeds 2 MB.
Here's how to do it:
Option 1: Enforce with a pipeline validation for pull requests
* In your Project1, create a new pipeline.
* Use the following YAML for the pipeline:
yaml
Copy

```
trigger: none
pr:
branches:
include:
- "*"
jobs:
- job: CheckFileSize
pool:
vmImage: 'ubuntu-latest'
steps:
- script: |
echo "Checking file sizes in the PR..."
git fetch origin +refs/pull/*/merge:refs/remotes/origin/pr/*
large_files=$(git diff --cached --name-only | xargs -I{} du -b {} | awk '$1 > 2097152 {print $2}')
```

if [-n "$large_files"]; then echo "Error: The following files exceed 2 MB:" echo "$large_files" exit 1 fi displayName: 'Check file sizes in PR' This pipeline will:
* Run on pull requests only.
* Check the size of all files in the pull request.
* If any file is larger than 2 MB (2,097,152 bytes), it will fail the pipeline and block the PR.
Option 2: Local Git configuration (for each developer)
On each developer's machine, run this command in their local repository:

```bash
Copy
git config --local core.bigFileThreshold 2M
```
This limits the file threshold for checkout, but does not prevent large files from being pushed. Using the pipeline validation (Option 1) is more secure for team environments.

NEW QUESTION # 404

You have an Azure DevOps subscription that contains the projects shown in the following table

You build apps for the projects by using Azure Pipelines.

Which two projects meet the criteria for granting free paralleljobs? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

- A. Project4
- B. Project3
- C. Project2
- D. Project5
- E. Project1

Answer: B,C

NEW QUESTION # 405

......

The desktop Designing and Implementing Microsoft DevOps Solutions (AZ-400) practice exam software helps its valued customer to be well aware of the pattern of the real AZ-400 exam.
