

C_S4EWM_2601 Deutsch Prüfung, C_S4EWM_2601 Exam

SAP CERTIFICATION TASKS

Course Version: 2601

Wenn Sie deprimiert sind, sollen Sie am besten etwas lernen. Lernen werden Sie unbesiegbar machen. Die Fragenkataloge zur SAP C_S4EWM_2601 Zertifizierungsprüfung von PrüfungFrage werden Sie sicher unbesiegbar machen. Mit diesen Fragenkataloge können Sie sicher das internationale akzeptierte SAP C_S4EWM_2601 Zertifikat bekommen. Sie können deshalb viel Geld verdienen und Ihre Lebensumstände werden sicher gründlich verbessert. Werden Sie noch deprimiert? Nein, Sie werden sicher stolz darauf. Sie sollen PrüfungFrage danken, die Ihnen so gute Fragenkataloge bietet. PrüfungFrage hilft Ihnen, wenn Sie deprimiert sind. Er hilft Ihnen, Ihre Qualität zu verbessern und Ihren perfekten Lebenswert zu repräsentieren.

SAP C_S4EWM_2601 Exam Syllabus Topics:

Section	Objectives
Internal Warehouse Processes	- Warehouse order management - Stock transfers and reposting
Inbound Processing	- Goods receipt and inbound delivery processing - Putaway strategies and warehouse task creation
Extended Warehouse Management Overview	- Core warehouse management concepts - SAP EWM architecture and deployment options
Integration with SAP S/4HANA	- Integration with MM, SD, and TM modules - Embedded EWM processes
Advanced Warehouse Management Features	- Wave management and labor management - Slotting and rearrangement

Warehouse Monitoring and Exception Handling	- Warehouse management monitor - Exception handling and alerts
RF Framework and Mobile Data Entry	- RF device configuration - Mobile execution of warehouse tasks
Outbound Processing	- Goods issue processing - Picking and packing processes

Reliable C_S4EWM_2601 training materials bring you the best C_S4EWM_2601 guide exam: SAP Certified - SAP S/4HANA Cloud Private Edition, Extended Warehouse Management

Um die SAP C_S4EWM_2601 Zertifizierungsprüfung zu bestehen, wählen Sie doch unseren PrüfungFrage. Sie werden sicher nicht bereuen, dass Sie mit so wenigem Geld die Prüfung bestehen können. Unser PrüfungFrage wird Ihnen helfen, sich auf die Prüfung gut vorzubereiten und die SAP C_S4EWM_2601 Zertifizierungsprüfung (SAP Certified - SAP S/4HANA Cloud Private Edition, Extended Warehouse Management) erfolgreich zu bestehen. Außerdem bieten wir Ihnen kostenlos einen einjährigen Update-Service.

SAP Certified - SAP S/4HANA Cloud Private Edition, Extended Warehouse Management C_S4EWM_2601 Prüfungsfragen mit Lösungen (Q131-Q136):

131. Frage

A grocery distribution center is validating replenishment execution in SAP S/4HANA Extended Warehouse Management through a web-based private-edition setup with handheld device processing. Replenishment tasks are created successfully after threshold checks, and supervisors can see them in the warehouse monitor. Users in one freezer-zone team can log on to their devices and navigate menus normally, but they never receive executable replenishment work automatically. Users in ambient storage zones receive work without issue.

The support team confirms there is no RF connectivity interruption and no explicit authorization error. A warehouse manager proposes changing the replenishment threshold values because the problem appears only in the freezer area. The consultant must restore automatic work assignment without disrupting replenishment settings that already function elsewhere.

Which step should the consultant take first?

Response:

- A. heck whether the freezer-zone resources are correctly assigned to the relevant queue and activity area for replenishment execution.
- B. imply the handheld menu profile so freezer-zone users reach replenishment transactions more quickly after logon.
- C. ebuild the replenishment planning cycle so freezer-zone work is released in a separate operational batch.
- D. ower the replenishment thresholds for the freezer area so more tasks become visible on handheld devices.

Antwort: A

Begründung:

Feedback:

Tasks already exist and are visible to supervisors, device logon works, and there is no connectivity or explicit authorization issue.

The failure is limited to one operational zone, which strongly indicates an assignment mismatch between available replenishment work and the resource/queue/activity-area setup for that zone.

132. Frage

CHALLENGE 4 — Template Classification for Hub Rollout Settings A release stinging improves urgent maintenance visibility at the western hub, but the rollout team is unsure whether it will overload smaller hubs in the next wave.

Which decision best reflects lifecycle-aware template control?

Response:

- A. Remove the setting immediately because any local setting creates unacceptable lifecycle divergence.
- B. Let each maintenance warehouse decide independently during activation to reduce central governance effort.
- C. Apply the setting everywhere because improved western-hub visibility proves rollout readiness.

- D. Keep the setting only after documenting whether it is reusable template behavior or an approved hub-specific variation.

Antwort: D

Begründung:

Feedback:

The decision preserves the improvement while requiring lifecycle classification. Documenting reusable or hub-specific status protects the shared template without blocking valid rollout planning refinement.

133. Frage

A spare-parts warehouse is being introduced in SAP S/4HANA Extended Warehouse Management using a web-based configuration environment aligned to an existing mixed deployment template. The consultant has copied the organizational design from another site and completed storage type and bin creation. During initial testing, users can post inbound and outbound documents, but monitor views for the new warehouse show inconsistent stock visibility, and follow-on activities cannot be started reliably. The warehouse number exists, but some execution-relevant objects appear to reference another warehouse structure that was used as the original template.

The project sponsor wants the smallest structural correction possible because master data preparation for the new warehouse is already underway.

What should the consultant verify first?

Response:

- A. hether wave templates from the original site should be imported before any inbound or outbound activity is tested.
- B. hether shipping point determination should be simplified until all stock is fully visible in the monitor.
- C. hether the foundational warehouse structure assignments were completed consistently for the new warehouse number and its execution-relevant objects.
- D. hether the copied storage bins were created with the correct coordinate layout for the new physical building.

Antwort: C

Begründung:

Feedback:

The issue is structural and affects multiple execution-relevant activities. The warehouse number exists, but some referenced objects still appear tied to the original template. That indicates inconsistent foundational structure assignment rather than a localized process setting. Before adjusting waves, shipping, or bin coordinates, the consultant should confirm that the basic warehouse organizational structure is consistently assigned for the new warehouse context.

134. Frage

A precision-tools manufacturer is moving warehouse operations from an older on-premise template into SAP S/4HANA Cloud Private Edition and is validating the target warehouse structure in a web-based environment. The new warehouse number, storage types, and bins were created, and basic inbound and outbound tests can be executed. However, internal stock movements for one operational zone still appear under an activity area naming pattern from the previous site, and monitoring views show mixed references between old and new structural objects.

The project team wants to preserve the rollout timeline and avoid recreating the warehouse from scratch. The consultant must choose the most targeted correction for this transition-related structural inconsistency.

Which action should the consultant perform first?

Response:

- A. ause all outbound testing until additional wave templates are created specifically for the new private-edition warehouse.
- B. erify that the execution-relevant structural assignments for the affected zone point fully to the new warehouse objects rather than copied legacy references.
- C. imply the warehouse design by removing the affected operational zone from the first rollout wave.
- D. ebuild all bins for the affected zone so the new warehouse no longer inherits structural display behavior from the old site.

Antwort: B

Begründung:

Feedback:

This is a modernization and coexistence scenario. The warehouse exists and transactions can run, but monitoring still reflects legacy structural references for one zone. That indicates incomplete structural reassignment during transition rather than a failure of bins,

waves, or the entire warehouse design. The smallest correct action is to validate execution-relevant structure bindings.

135. Frage

CHALLENGE 1 — Quality-Zone Routing During Farm Delivery SIT During SIT preparation, short-shelf-life produce can be received and warehouse tasks are created. Some products are proposed for regular chilled storage before the expected quality-zone route, while experienced receivers can manually select the intended path.

Which action best validates the configuration dependency before accepting the SIT result?

Response:

- A. Review product handling, shelf-life priority, warehouse process determination, and storage control behavior for the receipt pattern.
- B. Document the manual path as the standard receiving instruction because experienced receivers can reach the intended quality zone.
- C. Route all short-shelf-life produce through the on-premise warehouse until later refrigerated hubs are activated.
- D. Release the produce to customer allocation earlier so it does not remain in regular chilled storage long enough to affect testing.

Antwort: A

Begründung:

Feedback:

The scenario shows that receiving and task creation work, but the quality-zone route is not consistently determined. Reviewing handling, shelf-life priority, process determination, and storage control validates the configuration dependency behind repeatable inbound produce routing.

136. Frage

.....

Wenn Sie finden, dass es ein Abenteuer ist, sich mit den Prüfungsmaterialien zur SAP C_S4EWM_2601 Zertifizierungsprüfung von PrüfungFrage auf die Prüfung vorzubereiten. Das ganze Leben ist ein Abenteuer. Diejenigen, die am weitesten gehen, sind meistens diejenigen, die Risiko tragen können. Die Prüfungsmaterialien zur SAP C_S4EWM_2601 Prüfung von PrüfungFrage werden von den Kandidaten durch Praxis bewährt. PrüfungFrage hat den Kandidaten Erfolg gebracht. Es ist wichtig, Traum und Hoffnung zu haben. Am wichtigsten ist es, den Fuß auf den Boden zu setzen. Wenn Sie PrüfungFrage wählen, können Sie sicher Erfolg erlangen.
