## Cisco Conducting Forensic Analysis & Incident Response Using Cisco Technologies for CyberOps Sample Questions (Q48-Q53):

### NEW QUESTION # 48

An attacker embedded a macro within a word processing file opened by a user in an organization's legal department. The attacker used this technique to gain access to confidential financial data. Which two recommendations should a security expert make to mitigate this type of attack? (Choose two.)

- A. firewall rules creation
- B. removable device restrictions
- C. controlled folder access
- D. network access control
- E. signed macro requirements

Answer: C,E

### NEW QUESTION # 49

□

- A. Bash
- B. shell
- C. VBScript
- D. Python

Answer: D

Explanation:

The code includes syntax and modules such as `import win32con`, `import win32api`, and uses Python-specific formatting like `def`, `try/except`, and `print`, clearly indicating that this is written in Python. It also uses the `wmi` module to monitor process creation events—a common technique in Python-based process monitoring scripts on Windows.

### NEW QUESTION # 50

Which information is provided about the object file by the "-h" option in the `objdump` line command `objdump -b oasys -m vax -h fu.o`?

- A. help
- B. debugging
- C. headers
- D. bfdname

Answer: C

### NEW QUESTION # 51

Which information is provided about the object file by the "-h" option in the `objdump` line command `objdump -b oasys -m vax -h fu.o`?

- A. help
- B. debugging
- C. headers
- D. bfdname

Answer: C

Explanation:

The `h` option in the `objdump` command displays section headers of an object file. According to general usage and command-line documentation, and also explained in digital forensics tools discussions in the CyberOps course, the header information includes details about the name, size, VMA, LMA, file offset, and alignment of each section in the object file. This helps analysts understand how data is stored and organized within compiled files during forensic examinations.

### NEW QUESTION # 52

What is the steganography anti-forensics technique?

- A. hiding a section of a malicious file in unused areas of a file
- B. changing the file header of a malicious file to another file type
- C. concealing malicious files in ordinary or unsuspecting places
- D. sending malicious files over a public network by encapsulation

**Answer: C**

Explanation:

Steganography is the anti-forensics technique of hiding malicious content within seemingly innocent files, such as image, audio, or video files. The goal is to conceal data or code in a way that avoids suspicion and detection, thereby making traditional security inspection tools ineffective unless they are explicitly designed to detect hidden data within media files.

Steganography differs from encryption because it does not simply make data unreadable; it hides the existence of the data itself. It is commonly used in cyber operations to hide command-and-control instructions or to exfiltrate sensitive information in covert ways.
