NEW QUESTION # 70
Refer to the exhibit.
Which action fixes the code to access a child managed object?

- A. Delete line 2.
- B. Move line 2 to the last line.
- C. Change dnQuery to classQuery in line 1.
- D. Change parent to children in line 2.

Answer: B

Explanation:
The code snippet is intended to access a child managed object within Cisco's ACI. The current placement of line 2 (dnQuery.subtree = 'parent') specifies that the query should look at the parent objects, not the children.
To fix the code so that it accesses a child managed object, line 2 should be moved to after line 3, where tenantMo is defined. This change will ensure that the subtree of tenantMo is set to 'parent', which means that when defaultBDmo is called in line 4, it will

correctly reference a child managed object under tenantMo. References :=
