**Answer: B**

### NEW QUESTION # 18

You have a dashboard that contains two sheets named Sheet 1 and Sheet 2.

You want to add an object to the dashboard that users can click to switch to a different dashboard in the workbook.

Which object should you add to the dashboard?

**Answer:**

Explanation:

The object that you should add to the dashboard to allow users to switch to a different dashboard in the workbook is Navigation.

Navigation objects are used to create links between dashboards or sheets in a workbook. You can add a navigation object to a dashboard by dragging it from the list of objects and dropping it on the dashboard. You can then configure the navigation object to specify the destination dashboard or sheet that you want users to navigate to when they click on it.

You can learn more about navigation objects and how to use them in this article: [https://help.tableau.com/current/pro/desktop/en-us/dashboards\\_navigation.htm](https://help.tableau.com/current/pro/desktop/en-us/dashboards_navigation.htm)

### NEW QUESTION # 19

You have the following tiled dashboard that has one sheet.

You want to replace the sheet with Sheet2.

What should you do?

- A. Right-click Sheet2 and select Add to Dashboard.

- B. Select Sheet3 and click the Swap Sheet button next to Sheet2.
- C. From the context menu of Sheet3, select Deselect
- D. From the context menu of Sheet3, select Remove Dashboard item
- E. Drag Sheet2 to the dashboard.

**Answer: E**

Explanation:

In Tableau, to replace a sheet on a dashboard, you can simply drag the desired sheet (Sheet2 in this case) from the sheets list onto the dashboard area where the current sheet (Sheet3) resides. This action will replace the existing sheet with the new one. Right-clicking and adding to the dashboard adds an additional sheet rather than replacing, and the context menu options mentioned in the other choices are not the standard methods for replacing sheets within a dashboard.
